It seems like the atari 8bit still has some life in it in Countries like
Germany and Poland. I only use the Atari emulator for my PC, but I should
boot up the old Xl for the fun it some day,. :)

With no shields I would last about 40.5 ms playing on the Commander level.
Man those classic 8bit games were sheer brillance for their time. Does
anyone have the source code for Star Raiders? Or is it one of Atari's
closely guarded secrets? Along withthe source code to Pacman.. :) <grin>

Have a problem with a couple Lists put out on the Internet as to
Cartridges Produced By Atari....

I went by one and listed a Cartridge as the list suggested as RARE...

Well come to find out that B&C does in fact have the cartrige in stock
for the price of $5.00.

Perhaps we as a group/unit should find what we can as far as cartridges
produce for the product of the 8-bit we use and persue the rarity and
come up with an Authentic list of carts and a standared..ER or R should
be almost unatainable???

Just a suggestion what do you think???

I did not see the original post so reply here...Check your 1050...look into the Hole in the back on the left hand side facing you from the back.
See the hole says Drive Select.??

If you see anything in there but a Black TAB!!! Put something in there and move all to the Left..so only the black tab shows this puts the drive in D1: select...

I have specs on the 850 but there never WAS a printed Manual for this device.

They made lots &lots of em' but even in 85' or 84' when I bought my first drive
for the 8-bit I also bought an 850 in the box. The manual PROMISED a Finished
Printed Manual, but what we are left with is a fairly nice ring-bound dot matrix-
printed book. I would photocopy it for ya if you like. Mine does have an original
cardboard atari cover which would be the only difference......

Hey guy. Long time no see! You have been an 8-bitter since Christ was a Seaman and it makes me glad to know youre still kicking. Have you heard from Bob Wooley or Claus Buckholz recently? Bob really had some wacked stuff. He built a PBI hard disk interface before ICD did by a fair margin.

Hows THIS for a RARE RARE RARE cart:

Grey Cart with Dot Matrix printed Label reads:

DT-80
ATARI/ATR8000 80-Column
Dumb Terminal Emulator
Rev 1.0 SN# 177
(C) Copyright 1984 by:
AMIABLE COMPUTER
ENHANCEMENTS
P.O. Box 10233
Lansing, MI 48901

This cart was WRITTEN by Claus Buckholz if you can believe it!
I think it is the best of several ATR8000 term programs available for the Atari. It has redefinable keys, smooth scrolling, and is significantly faster than the ADM/3a emulator which comes with the ATR8000. The only beef I have about it is that the PCB he used for this cart is a bit too THICK for the Atari's card-edge connector. If used often, it will make other carts wiggly.

Oooops. Sometimes we can carry things a bit far. Faster than the term program which CAME with the ATR8000. Folks might begin the think SWP rose from the ashes and started stamping out machines again.... Yea, I hear PERCOM is coming out with a QUAD density flippy drive with 3x ultraspeed and a nifty track indicator....

Oh, and RANA systems apologizes finally for that 'No Track 0 sensor' design debacle. Anyone ever get a Rana 1000 to STAY in alignment? I bought my first oscilloscope just to keep mine on the road many many moons ago.

Making and keeping a list of Atari cartridges is real tough. Trying to create a perfect standard for rating the rarity of those carts is impossible. Any rating system is very subjective and must be based on the authors experience. Andrew Krieg has done a great job with his list but it still has a few flaws. What we need to do as a group is give Andrew feedback about the individual carts on the list, he will add, change, and modify the list as needed to correct the accuracy!

Atari computer products and software were definitely not evenly distributed in the US. Some carts that were common in our area were rare in other parts of the country! It would be impossible to know how many of each were actually produced.

Hear hear! The Atari has no monopoly on good game concepts. Someone was
beefing about PC games. Some games just aren't any good no matter how much
hardware you throw at them, and others need little machine at all to be fun.

Missile Command
Astroids
etc.
Every played DROL? What a wild concept! What's with the turtle with the
jetpack???

Heh...I know Lee...he's full of shit...kidding!

Actually, I used to write for ST-Log, and also did a few articles for
ANALOG, and I met a lot of the ANALOGers and am still in contact with
a number of them (Ian Chadwick, Clayton Walnum, Andy Eddy, etc.).
Lost track of Lee, tho. :\

As to playing and winning Star Raiders without shields: it IS
possible, but your chances are survival are slim. I use the shields
in combat, but turn them off the rest of the time. Careful
hyperwarping, a quick mission time and avoiding being hit is actually
the best way to get Star Commander Class 1.

Unfortunately the 400 (and 800) are incapable of making use of RAM
located in the $C000-$CFFF area, which cuts the total down by 4k. The
ROM (which is not switchable) takes up 12k, which makes a total of
UNusable RAM about 16k. So the machine is left with 48k of free RAM
for programs to use. Thats the difference- with XL/XE's you can use
the RAM under ROM, because the ROM is switchable, and so you actually
have 64k to use.

It certainly sounds like your trying to "boot" the computer without a
disk in the drive. What are you actually trying to do? start the
computer in BASIC so you can type in programs, or run a cartridge?
It's difficult to say exactly whats happening when you haven't stated
what you want it to do. But anyway that "beeping" you hear will
probably be the sound of "sectors loading", even tho you don't have a
disk in. It's just the way the 1050 tells the computer "Hey,
somethings wrong!", and the computer interprets that as "bad sectors".
So basicly the computer is telling you "Hey, the drive won't give me
anything, turn it off or fix it!".

->Dan.

Hmm, I can only assume that you mean that the disks are in Double Density, not High Density. I assume this because you mention the access to a 5.25 PC floppy. Anyway, I have a couple of links on my home page to some PC utiities that try to read ATARI Double Density disks in a PC 5.25 floppy. One is called MYUTIL, which is command line driven and a little slow. The other is called ATARIDSK, which has a nice user interface and hence is much easier to use. There is also a program called ANADISK which can make a "dump" of a single density disk, and a progam called DEANA which converts these "dumps" into XFD image files usable on most Atari emulators. ATARIDSK seems the better program, I have used it successfully on a 1.2mb drive. MYUTIL has yet to function properly on the 1.2, but works great on a 360k PC drive. ANADISK - well, I have yet to see it even register a 1.2mb drive, but seems ok on a 360k drive.

Good luck

On atari.archive.umich.edu, somewhere in the 8bit folder (in the transfers section (I think)), there's a file called dcmatr12.zip . This is a program for the PC. This file also contains the C sourcecode for the program. This can even handle DD disks.

All we need now is an Atari 8-bit Web-page Plug-in! Just imagine how much better than java that would be :) we could do anything in that little emulatror box on the page :) even have ATASCII animations :)

I liked Lane Winner. What ever happened to him? He was the OS and
hardware GURU for the 800.

The idiot who was my "project leader" for the S.W.E.A.T. project was
Clyde ???? (forgot). My supervisor was Ken Balthauser. When they
assigned me Superman 3, they promoted Clyde ???? to be My supervisor,
even though I had told Ken that I would complete SWEAT but would never
work with Clyde again. When they made him my supervisor, I waited
until Xmas bonuses were paid, then quit. I can take a hint.

Remember Hitchhiker's Guide to the Galaxy? Remember all those idiots
in the bathtub, waiting for the next ark to arrive on Earth? They were
the same people who worked at the Home Computer Division. All they
ever did was schedule meetings, and show off the new "ORG chart" every
few weeks, as the management played musical chairs. I think I new
enough about what was going on in that building to say accurately that
those carts were not coded in San Jose.

If I'm wrong please enlighten me. Give me an example from 1981-82.

>programming talents and game designs.

Funny, different people's perceptions. His programming talents were in a class by itself. He almost singlehandedly wrote DE RE ATARI which enlightened others how to program the thing. He was a hardworking brainy guy, who was smart enough not to sign the "Atari owns us" agreement when he hired in. He wrote stuff for Avalon Hill on the side and took prode in opening his notebook at the meetings so we could see his royalty checks.

As for being a nice guy, well, we all know a Chris Crawford in real life. They are smarter than you and they know it. They are busy and well diciplined. They are hard to approach (unless you are in their "league"). I used to pester him with questions, and I thought, all things considered, he made a good effort to answer them.

He also pulled off a coup that burned management's butt. He got upper management to form a new group for him and his flunky, Larry Summers. IT was called some kind of research group--I forgot the name. He didn't have to report to the same idiots anymore. I found out later that there was an agreement between the 3 divisions not to let programmers transfer between divisions, yet he had found a loophole. I know he was as frustrated as me working for those buffoons.

As for his games, wargames were his thing. I thought he did state of the art stuff, though I didn't like playing that type of game much. I followed his career through "Balance of Power". He bought an expensive development for the Mac when it first came out and wrote the game originally for the Mac. When that was a big success, I read he decided to produce (meaning take the risks and reap the rewards) from his next project which was a bust. I never heard of him since. Anybody care to fill me in?

The design of ET was not so carefully thought out. What happened was
this:

On an airplane with Stephen Speilberg, the chairman of Warner, the
illustrious and late Steven Ross, decided to buy the rights for many
millions of dollars. Then he told Atari he wanted versions of the game
ready for Xmas sale. Only there wasn't time to do it by Xmas. So they
got all the ex Control Data programmers from the Home Computer
Division to design and code the game. You know the type? Same kind of
people who work for IBM. Do you like IBM's OS2 Operating System? Same
kind of people. They are SO much different than the people who worked
at the Coin-Op Division and the VCS division.

So this was the crash effort and also the intellectual outflow of the
system programmers at Home Computer Division. Did you ever see any
improvement in the OS or the hardware from the 800 until the company
went belly-up was sold to Tramiel? Well, that's because all the genius
had left when Warner owned the company.

Ken Siders (who wrote KEDIT and KASM) released a schematic and instructions
on making an R-Verter clone. It plugs into the SIO bus, and provides
reliable communication at 19.2kbps (I know, I've built a few). It uses the
MAX-232 chip for RS-232 compatibility, but otherwise the parts are cheap
and available.

Hello,
I hope someone could help me : I want to use a PC keybord and any help is more than welcome. I know of transkey but this must be impossible to find today...
Maybe the man who want to make the new atari in PC case could help me more than an other but fill free to help...
And, I also want this product at this low-price....
Good luck to you.

Thanks for all the help. Bye

You're absolutely right. I think one of the major issues with the Internet today is that people continuously want to write off the Internet as some super modern example of high-tech computer engineering that will be an example of networking for the 21st century. It's actually become kind of fashionable, really, kind of like a fad, to talk about the future for the Web and all that.

It's really not that way at all. The RFC's for TCP and IP were written up in 1981. It's nothing new. It doesn't require a 5 zillion bit processor running at 50 zillion megahertz to look at and process a couple of IP and TCP headers. A TCP/IP stack might be required to: compare IP addresses. Increment send and receive counters. Compare lengths of packets. Test and set bit fields like SYN and ACK.

Not exactly the same thing as photorealistically rendering the full screen in 3D at 60 frames per second.

Multitasking is not a requirement for an implementation of TCP/IP. Like you say, an FTP client would require almost nothing more than Applesoft BASIC's command line interface. It really wouldn't be that much different. Just keep track of two open TCP sockets (command & data), and bingo-- you'd be flying.

Actually, come to think of it, I saw an implementation of Unix on a Z-80 once, called Uzi. Somebody probably said there was "no way" it could be done, and so someone did it.

Just for laughs, it might be cool to make a Web browser for the IIe in DHR. I really don't like HTML to be honest, but seriously folks, "<A HREF=" is really not that much different than "?SYNTAX ERROR".

IIe-scape ... heheh..

-ej

3063. wtb: Atari 400 power supply

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-30 00:00:00 UTC
From: "M.J. BEAU" <mjbeau@net-link.net>
Message-ID: <333EC2AB.12DF@net-link.net>
Source record: 74203

I just picked up two Atari 400 computers at a local flea market, but they are without power supplys. I need to buy one power supply for sure, in order to test my systems, and perhaps two if they are both working. Please e-mail me direct if you have a spare original Atari 400 power supply for sale. Thanks! Matthew

3064. wtb: switch box

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-30 00:00:00 UTC
From: "M.J. BEAU" <mjbeau@net-link.net>

Help! I am in need of an older, unusual tv/game switch box. This tv/game switch box was used for very early models of the Magnavox Odyssey^2, and certain pong systems as well, which had a weird end on the RF cord. Note : This is Not the same switch box as is used with the Atari 2600, or other popular classic game systems.

If anyone has this switch box in working condition for sale please LMK.

Thanks! Matthew

: graphical access isn't important...

If you are limited to CLI utilities then a shell is no worse than TCP/IP.
I mean, on a shell, the server is doing all the work and the Atari is just
a dumb terminal. The only reason to implement TCP/IP is to write clients
for it, like E-mail, Web Browsers, Newsreaders, etc... And the vast
majority of these are beyond the machine's capabilities.

Hell, on my accellerated A2000 I still sometimes dial in and just use the
shell instead of launching PPP (like right now).

It is faster if you don't care about graphics.

3066. Re: atari reborn....possibly the phoenix?

The mortal Asterisk wrote:
: True, but Amigas aren't officially supported anymore. Besides, there

Support is not great, but it still exists. Certainly more activity than the Atari8 crowd.

: should be a platform that's deliberatley less powerful than the others,

I think this is a dumb concept.

: and very cheap at the same time. Too bad they don't make ST's anymmore.
: Those were cheap and powerful. The point is to have a cheap machine

Yes, but what is the LCD today? A 68030 is more of a LCD processor today than a 1.79mhz 6502. My point is that if you are trying to reach a ~$150 pricepoint, the 32-bit machines of yesterday have already depreciated into that area with superior performance to any proposed 8-bit machine.

: designed for certain tasks. You don't need a Pro 200 with 64 megs of ram
: to learn Basic, or to do Word processing, or even to browse the web. A
: cheap 16-bit computer similar to the IIgs, or even to an Amiga or ST,
: would be perfect for a school, or a small business. Even for home use.
: Unless you're planning on doing 3D rendering or something, it isn't
: really necessary to have so much power. Especially in Schools, who don't
: have a lot of money.

I agree. My point is that a machine already exists that is by far the most powerful and efficient low-cost platform. You can run an Amiga 500 on floppies alone just like an Atari 8-bit and it has graphics, sound, a window/shell UI, a large software catalog, and a realtime multitasking core that would make any Atari8 effort foolish in comparison.

I'm not saying there isn't a role for the Atari8 in the 90s. But unfortunately that role is primarily going to be with stock hardware running games and very modest single-tasking applications because any attempt to make it anything more will require more resources than you'll EVER get back. That's why companies like FTE or the other guy who offered a 65816 board failed. A modernized Atari 8-bit archetecture should have been released around the time of the Apple IIGS. The peak performance of an Atari8 will forever be a Black Box/FB system with a lot of banked RAM, SpartaDOS X, R-time 8, and a Basic XE cart stacked on top.

: BTW, I know where I can get a brand new Amiga 600 for $150 :)

You wouldn't want an Amiga 600. They aren't very upgradable. It's Amiga 500s that are what I'm talking about, and they are practically being given away all over the place.

Nice to see you still arround..Talking about Rana, Thought that Future Systems went out of business a long time ago??

I think I still have both the old bottom Rana board diagnostic Roms to set up the system totaly with documentation..Worst drive I ever worked on for alignment..spent 12hrs attempting to get one to run Flight Simulator and then called Rana at the time and was told the mech in the drive would not read that disk with all the protection put into it..should have called them first!! Oh well long time ago live an learn..

Bob Wooley is on the net...still doing things for the 8-bit...1200XL area...

bob

3071. Don't Fear's 2nd Auct (Update 7) Part 1

Newsgroup: comp.sys.atari.8bit

Don't Fear's Huge Second Auction (Update 7)

Part 1: 2600/5200/7800

Alright kids here we go!

Notice there are a few new items!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

Don't Fear's Huge Second Auction (Update 7)

Part 2: Everything Else

Alright kids here we go!

Notice there are a few new items!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

. . . American Techna-Vision has a HUGE number of Supra MicroPrint
Parallel Printer Interfaces for sale. (1000+) pieces available.
No reasonable offer refused. You pay shipping from San Leandro, Ca.

Features: Built in drivers, no additional software necessary.
Will interface ANY Atari 8-bit computer to ANY standard
Parallel Printer (with the standard 36 pin connector.)
Special note: The 1200XL needs easy internal mod
to work with interface.

Need just one? Single unit price . . $7.50 ea. plus
$6.00 shipping/handling. MasterCard / Visa Welcome.

Contact: American Techna-Vision Phone 510-352-3787
15338 Inverness St.
San Leandro, Ca. 94579

3075. Re: Counterfeit Prototypes (Was Re: New? 8 Bit Carts)

Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari,rec.games.video.classic

Christ, why is it necessary to bring up my name in your post?

I don't remember ever posting about your business, Andrew!
While my deal with Bruce is public knowledge and no secret, I would
still appreciate being left out of your inane ramblings. You don't see
me running around bragging about my stuff; I prefer to remain low-key
and would appreciate you not putting me in the spotlight!

Since you dragged me into this, let me suggest that you get some of
your facts straight before you post. My notes are below...

krieg@miller.cs.uwm.edu (Andrew Krieg) wrote:

>I had a nice long talk with B&C yesterday. Here are the highlights from our
>discussion on Atari 8-bit carts.

>1) B&C burns copies of prototypes title, and prints labels for them.

B&C clearly states that they are copies. This is old news that
everyone knew last week.

>2) B&C sells their copies to the public *AND* to Video 61 and Best
> Electronics.

Again, old news. Anyone who thought Video 61 was selling legitimate
protos is a bigger fool than Lance.

>3) Other titles that B&C have but haven't got around to burning copies for
> yet include:
> Commando
> MidiMaze (this sounds cool as you should be able to network
> with ST MidiMaze players)
> Xenophobe
> RealSports Soccer

You forgot Mat Mania Challenge.

>4) B&C has a standing deal with John Hardie to give him first pick of
> anything new that comes in.

Again, while this is pretty much public knowledge, I fail to see the
point/purpose of posting it here.

>5) B&C obtained a couple of uncompiled sources for 2 Atari 8-bit games
> tenatively titled "Puffer" and "Jungle River Cruise". I believe John
> is in possession of these now.

This is all wrong. The Puffer is a system, not a game. I have a Jungle River Cruise cartridge, not uncompiled source code. I also have a few other games for it. The full scoop on the Puffer Project will be available on our web page. I'm sure Keita will let everyone know when it's up.

>6) B&C also have some chips that I believe can only be installed in XEGS
> machines. They are multi-game chips which would replace the built-in game
> chip on the XEGS.

Can't argue that one.

>I think we can look forward to at least a few more new 8-bit titles in the
>months to come.

Andrew, please look by yourself.

John

Using the dsk file for Murder on the Zindeneurf I've been experiencing some problems. With v0.18 it was ok except for the three grey text lines at the top. There was some vertical word wrap,i.e. the bottom of the letters would appear at the top of the line. The game was playable. With v0.19 all three text lines are now the same line so to play I have to use v0.18. Is this a problem with the compatability of the game? Did the game authors use unorthodox programming methods? Just curious. XL-It is still the best I've used.

Nick Nova

P.S. For the best 30 minute murder mystery ever written for a pc, it's Murder on the Zindeneurf. Always a different mystery.

3077. Re: Atari 1050 diskdrive problem

> it works fine.

The Atari was a strange animal. You could turn it on without the disk drive on and just do basic or whatever. If you turned on the drive you had to have a disk in it. Using the thing involved constant turning off and on of the computer dependin on what you were doing that session. Each time you wanted to play a new game, turn it off, put in the disk, and turn it on (the computer). If you want to save your own programs, like basic, boot with DOS 2.5 or something then use a blank for saves. I hope I'm remebering this correctly as I only have the emulators now.

The Apple IIe was similar.

When I went PC I was terrified at the warnings about too many hard boots.

I miss the 8-bits.

3078. Demon Attack - bit rot victim???

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-30 00:00:00 UTC
From: Dan Mazurowski <smedley.antispam@gte.net>
Message-ID: <333E43E7.FF6@gte.net>
Source record: 74369
Cross-posted to: rec.games.video.classic,comp.sys.atari.8bit

Two friends of mine both own the game Demon Attack (from Imagic) on cart for the Atari 800. And the game suddenly stopped working without warning for both of them. I am curious - does anybody know if these carts were done on EPROM rather than conventional ROM chips? I have heard that EPROM is much more susceptible to bit rot, and it sounds like this is what has happened to these carts.

If this is the case, would it be possible to get my hands on the ROM image, burn new ROM chips, and install these chips in the carts? Since they both own legit Demon Attack carts this would not be an act of piracy. I have not opened either cart so I have no idea if it even uses a standard chip or not. In fact, I do not even know if I can open the cart without ruining it.

If it is possible, could somebody please give me simple instructions on how to do it - and perhaps loan me a ROM burner as well?

By High Density I assume you mean 1.2 or 1.44mb floppies produced using the
Black Box Floppy Board? If not, then you might want to repost your message
with the correct density.

If you really DO mean high density disks produced using the BBFB then send em
my way and I will gladly do the transfer for ya.

But I have to disagree. A cart would be almost as incompatible although I must admit it would be faster. And they couldn't do a PBI interface because their current production model, the 65XE didn't have one.

So, Get your brain-dead decisions right, it was leaving the ECI/PBI off the 65XE that was brain-dead :)

: for both of them. I am curious - does anybody know if these carts were
: done on EPROM rather than conventional ROM chips? I have heard that
: EPROM is much more susceptible to bit rot, and it sounds like this is
: what has happened to these carts.

I don't believe Imagic used EPROMS, ROMS generally don't suffer from
bit-rot (Actually I haven't had any EPROMs do it either). At least I've
never seen am Imagic cart with an EPROM inside.

: If this is the case, would it be possible to get my hands on the ROM
: image, burn new ROM chips, and install these chips in the carts?

Not worth the trouble, you can pick Demon Attack up locally or on the net
for $1 or so.

Later,
Bob

I used to use a home built R:verter cable, and it worked very well too. This one actually used the 1489 chip, so I decided that the SIO2PC cable was more important, and promptly dismantled and reassembled it into the SIO2PC cable I wanted. If anyone is using their Atari for modem use, I would recommend trying out the R:verter cable. It looks fairly easy to build, and because it is a direct connect SIO cable you only need direct connect drivers to run it.

>: Goto ftp.teleport.com\vendors\bensmith and download the Carina BBS
>archive.
>: It has a very good reputation and is still supported, AFAIK... :)
>
>It is supported? Tell me what's happened to the software in the last 2
>years.

Carina BBS is not only still around and supported, it is improved upon on an almost daily basis.
The Carina Support BBS can still be found at (503)-761-9074, and registered users have access to over 200 support files available there. Networking is offered at no additional charge (other than LD
if necessary), and there are tons of on-line games for it, support for Atascii movies, databases, voting polls, and much much more. In addition to this, Carina is easily modifiable by the user, and
there are many versions of Carina out there which you can not even tell are Carina BBS's by their looks.

Carina BBS uses a ML "Core" program, and Atari Basic as a Scripting language to dictate what the user sees on-line. To make a long story short, with Carina, it is as simple to write modules, as to
do normal prints to the screen. Carina will handle proper 40 or 80 column display for you, page breaks, ascci/Atascii/vt52 etc; making the programming of modules very easy if you decide you wish to
run something other than the stock modules. If you print to screen in your program, Carina will automatically send everything out over the modem as well. What can be simpler?

I have seen Carina BBS's with a totally Star Trek theme, others with a Wall Street look, etc. Some Carina BBS's are used for commercial purposes as well, Catalog Shopping Center's (There's shareware
or commercial software for Carina to allow this), on-line paid advertising, and even a number of on-line real estate sales aids, including the offering of full color graphics of the homes displayed
on-line.

Carina is truly a versatile system, and is only limited by the Sysop's desires and visions, and it supports all of the newer high speed modems. I've been running 28.8k's on mine for years.

There are no "Back Doors" in Carina, but with Sysop Access, I can usually repair your problems on-line if you desire.

Carina BBS does require that you have a hard drive. If using an MIO, it will support as many partitions as you have, and if someone gives me the necessary code, I would be happy to make it do the
same with the Black Box. This means that if you a 1.2 gig hard drive, you can access and use the whole works for your BBS if you desire. I find this especially useful since I also support IBM's on
my system, and everyone know's how gaud-awful big IBM programs tend to be.

While I may not be very vocal, I am still around, Shadow Software, have been forever, and will be forever. I still offer full support for ALL Shadow Software products, as well as other products
either by me, or that I have acquired the rights to, that were marketed under other names.

3092. Re: 80 Column

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-31 00:00:00 UTC
From: mratari01@aol.com
Message-ID: <19970331164801.LAA11309@ladder01.news.aol.com>
Source record: 74272

80 Columns isn't a problem at all, software to support that 80 columns is what is in such short supply. Magma had a whole line of carts which supported 80 cols for term progs to word processors, and
all offered crisp clean displays. Their 80 column only cart, while offering a perfect display, simply wasn't supported by other software. Like running BobTerm with it, you still only get 40 cols.
If you write your own software though, it works great.

I heard that they have purchased them... but are you sure that it is
with the intention of restarting production of Amiga models? I have
suspected that they bought them cheap for access to copyrighted
technology that Amiga held.

I heard about that, but who knows what they'll really do if they buy it?
They may use some of the technology to enchance their PC's and not
support Amiga users at all...

wrote:
John, you would have been smarter to whine about this in private email
only. Since you have made a public posting I am publically posting
this (my 2 cents).

>Christ, why is it necessary to bring up my name in your post?

Where was it ever written that it is REQUIRED that something be
NECCESSARY in order to bring it up in a newsgroup? And even if it
were required, which it is not, who then is the authority upon the
criteria of neccessity? You perhaps? I think not. Also, what has
Jesus to do with this?

>I don't remember ever posting about your business, Andrew!
>While my deal with Bruce is public knowledge and no secret, I would
>still appreciate being left out of your inane ramblings.

Funny, I am a member of the public and I had no such knowledge of your
special status at B&C. I rather enjoyed the information you
insultingly refered to as "ramblings."

>me running around bragging about my stuff; I prefer to remain low-key
>and would appreciate you not putting me in the spotlight!

Translation: you would prefer to have your special deal with B&C be a
secret and NOT be public knowledge. That's understandable, but you
cannot expect others to operate accrding to your desires. If I were
you I would want it to be "low key" also, but I wouldn't slam a guy
for bringing it up when he had every right to, especially in front of
the people he brought it up to. You stating here in front of everyone
how "public" the knowledge was is an insult to the collective
intelligence of most of the people that frequent this newsgroup.

>Since you dragged me into this, let me suggest that you get some of
>your facts straight before you post. My notes are below...

Getting facts straight is always a benefit. I say truth and and
accuracy rule.

Cheers,

Jon

My post reflected what B&C told me. If they got a few things mixed up it was probably due to the fact that they were incredibly busy last week and had many more important things on their mind. No malice or mis-representation of information was intended.

Ditto.

>>3) Other titles that B&C have but haven't got around to burning copies for
>> yet include:
>> Commando
>> MidiMaze (this sounds cool as you should be able to network
>> with ST MidiMaze players)
>> Xenophobe
>> RealSports Soccer
>
>You forgot Mat Mania Challenge.

Correct, I did forget this one.

>>4) B&C has a standing deal with John Hardie to give him first pick of
>> anything new that comes in.
>

>Again, while this is pretty much public knowledge, I fail to see the
>point/purpose of posting it here.

Again, no malice intended. Just pointing out to fellow consumers that B&C
is probably not a source for us to get "Atari-direct" prototypes as they are
already spoken for.

>>5) B&C obtained a couple of uncompiled sources for 2 Atari 8-bit games
>> tenatively titled "Puffer" and "Jungle River Cruise". I believe John
>> is in possession of these now.
>
>This is all wrong. The Puffer is a system, not a game. I have a Jungle

3103. Maybe a stupid question, maybe not...

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-31 00:00:00 UTC
From: ken@condor.circa.ufl.edu
Message-ID: <ken.1316.000DF3EC@condor.circa.ufl.edu>
Source record: 74283

You'll have to pardon my ignorance, but I'd like a question answered for me if possible..

At the time I sold my Atari 130xe (sniff) I believed it was impossible to have more then 128MB of hard disk space on it (with an MIO you could have 8 drive partitions D1:-D8:, then ram disk D9:, with SpartaDOS you could have a maximum of 16MB per partition).

Now I'm seeing people advertise 8-bit BBS'es with substantially more disk space then what we believed (for the record I had 160MB on a BBS but could only address 128MB of it at that time).

What's the deal here? How are they doing that?

Just curious.

Thanks,

Ken

That's why I like the (hard) reset button many of the PC's have.
Constant power cycling is NOT a good thing for any computer. On my
800XL unfortunately, the reset switch is soft or warm. It can be made
to emulate a hard reset by puting a non zero value in I think decimal
location 580? Can't remember. The only prob with that is, if the
machine is locked up you do not have any way to store a value in that
memory location.

Cheers,

Jon

Add Tandy's Color Computer 1,2 to the list... they could show the lower-
case ascii codes, but as reverse-colors of the uppercase chrs. Some later
CoCo2's (with some crazy pokes to the VDG) and all CoCo3's could do
lowercase, but not for commands in the rom-based RS-DOS. However, under
OS-9 (read: most powerful 8-bit OS ever...) you could use lower-case for
commands and disk files/directories, would auto-detect the newer VDG in
the CoCo2 and lots more.

I realize that this is slightly off-topic, but I'm very good with these
machines. Just to keep things in c.s.a.8, I *love* my Atari800 too!

Anyone wishing more info, or just to chat about Tandy's (or want to teach
me more about my 800... I'm an Atari newbie) can e-mail me at the address
below....

Hope this helps,
Roger "Merch" Merchberger

I've played with emulators, and they have their place in my life. But when possible, there's still no substitute for settling down in front of the real thing and hearing the disk drive beep at you as it loads a game you haven't tired of after 14 years...

3109. Some questions about the awesome XLIT!

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-31 00:00:00 UTC
From: "Francisco Ogalde B." <Fogalde@cec.uchile.cl>
Message-ID: <3340B53A.3E75@cec.uchile.cl>
Source record: 74289

Here is my questions:

1. How can I get the vertical line character from the keyboard?
(chr$=124)
2. How can I back to Turbo Basic from DOS when I'm in Turbo basic
and call dos (MyDos 4.50)?
3. How can I get to work the RAMBOOT in MyDos 4.50 with plain basic
and Turbo basic?

I'm working in a a-la-Norton commander program for the Atari written
in Turbo basic using the amazing XLIT! The goal of this project is to
move files from/to megaimages, I can retain only the best games, not
the crappy ones! I somebody can tell me how to do this tasks I can
finish this program easily than now. I will post the finish work in
this newsgroup. E-mail me your replies and suggestions about the
program.

Can anyone direct me toward a good fast menu/boot maker for .ATR images??
I've got plenty of files and would simply like to make'em load quick.

Nearly all my .ATR images have the micropulse (C)1984 booter on them.
deleting and replacing individual files with something like imagemanager
(run from dos c prompt) doesn't seem to work. the files are there, but
the fast booter doesn't recognize them. Help!?! suggestions?

Keith

Believe it or not, he mentions on the site that he's trying to do something sort of like that. Seems like all you'd need (ha) would be a plug-in that emulated a subset of Atari Basic and could display the Atari character set in a little window...:)

Better yet, an emulator could be set up as a helper application for files ending in .atr, .xfd, etc. Rainbow (for instance--Chris?) could do this if it had the ability to boot a virtual disk from the desktop (i.e., double-click an .atr file in the Finder causes Rainbow to load the disk image and reboot). (Of course, I'm talking about the Mac version, because that's what I have, but certainly this sort of thing is also doable on PCs in some way, I would think.) Then when you download a disk image in your bowser, it would immediately boot up in the emulator. :)

Howdy !

Since the disk based Mac65 Version is free for use with XF2 I need a
documentation for this assembler. If anybody has this manual in text-based
files around here, please send it to me.

THANKS!

If I have no success with getting a text-file-based, I need at least some
key shortcuts.

I apologize for mentioning John's name in my previous post. It did not occur to me that this was a controversial or improper thing to do.

I called B&C to find out if the $19.95 and $14.95 prototypes they were selling were "Atari-direct" or reburns. I had no intention of looking for or making secret deals. Bruce and I got to talking about how he gets prototypes and what happens to them. Bruce told me about the deal with no prompting from me whatsoever.

In the course of this thread my name has now been associated with malicious intent, sour grapes, hustling, making secret deals, etc. all on speculation.

Now who's being dishonorable?

Continuing my quest to improve my Atari keyboard, I would like to hear from persons using Transkey...how well does it work? Also, how does it work? How much does it cost, and is it worth it?

Also, there is some kind of modification that firms up the keys on a 130XE...anyone have this one or know more information about it?

Any information would be appreciated.

Falcon

>to me that this was a controversial or improper thing to do.

Andrew,

Thank you for your apology. I also apologize if I came across a
little harsh, but I hope you can understand where I'm coming from.

>I called B&C to find out if the $19.95 and $14.95 prototypes they were
>selling were "Atari-direct" or reburns. I had no intention of looking for or
>making secret deals. Bruce and I got to talking about how he gets prototypes
>and what happens to them. Bruce told me about the deal with no prompting
>from me whatsoever.

This should serve as further proof that this is nothing we are trying
to hide.

>In the course of this thread my name has now been associated with malicious
>intent, sour grapes, hustling, making secret deals, etc. all on speculation.

>Now who's being dishonorable?

Andrew, You were never called a hustler or accused of making secret
deals. Keita's account of events was simply a true story. As for the
malicious intent and sour grapes part, I do not personally believe
that was your intent.

Thanks for understanding,
John

Hrm, now I wanna sit down and write a MUD client in 65816 assembly for
upgraded
Ataris... Now, if Curt'll put a 65816 in those new machines...

Nonetheless, sometimes it works. In fact, with my PC drive and XF551,
that's
the only combo that does work, formatting on the XF and writing with
either or
both.

Did I say bluff?

What I said was that it can't be done the way Curt described. I said he must be missing some information. Nobody has posted rebuffing my statement.............because it is correct.

>
>I would be interested in a composite to RGBI converter because I have

I will tell you why it only has monochrome out, because it's SECAM and a SECAM GTIA was never produced. The PAL GTIA is used in France and the Lum outputs are run into an onboard encoder to produce a "psudo" color depending on the Luminance output, composite only. This is why a SECAM VCS or 800 has nowhere near the same number of colors (16) availible as a PAL or NTSC unit (256).

The FGTIA was never completed as the market size did not warrant the
expense. The largest SECAM market is not France but the Soviet Union
(former) and in 80-84 sales of these items there were not possible.

: finish it off :(. At level 20, there is a ship on my radar, but I
: cannot get to it. I have tried climbing all over the mountains, with a
: super speed module which is apparently supposed to get me over hills
: etc, but as I say, I cannot get to it....

I managed to destroy what was almost certainly the saucer base - situated on the ground and it took a huge number of hits to destroy it. Once I destroyed it though (and took out the remaining saucers that were hovering around as I was doing this) then that was it - an empty level 20 with no more levels to go to - could go back to the mothership and back to Koronis Rift but there was nothing to do. A shame, though it's been about 6 years now since I last played it.

Do any of the current PC emulators run Koronis Rift. I've tried 5 (3 under Linux - Atari800, ACE and Pokey, and 2 under DOS - XFormer and XL-it) but the best I could get was the nostalgic LucasfilM startup - most of them wouldn't run it at all.
Do any of the newer versions of the emulators run this game? And do any of the keys work in Rescue on Fractalus yet?!

Paul.

May post this ad once or twice more over next few weeks,
but may not... frankly Miss Scarlet, this is beginning to
bore me. And I don't know nothing about birthin' no babies...
then again neither does Planned Parenthood.

If you see anything you want, need, etc make an offer.
Buyer will be responsible for shipping charges.
Sales to contiguous US only.

DID YOU REALIZE THERE IS A RUMOUR CASSETTE TAPES MAKE EXCELLENT KINDLING!

Atari Games for Sale

(All complete with boxes and documentation, unless otherwise noted)

Cassette Tapes
~~~~~~~~ ~~~~~
**AIM Software

t X-Ray Art construction game

**Atari Corp

t States and Capitals Program cassette ONLY, Instructions and
game on tape.

**Cosmi

t Aztec Challenge Seems to be "Mountain King" type game.

t Caverns of Khafka typical cavern-tomb danger graphics
game

t The Crypts of Plumbous A lot like "Defender", as I recall.

t Forbidden Forest Find your way out of a deadly graphic
forest

t Galactic Avenger "Space Invaders" type game

t Professor IQ Series of educational learning games

t Slinky You've played with the springs, now try
them on the screen!!

t Spider Invasion Destroy deadly spider mutations, their
eggs and nest. Are you getting as
itchy as I am?

**Edu-ware Services
~~~~~~~~

t Compu-read 3.0 Tool for improving reading speed and
comprehension. NOT boxed, but in it's
own folder including docs.

**EPYX

t Curse of Ra Expansion module for "Temple of Apshai"
adventure game. Book of Lore missing.

**Program Design, Inc.

t Addition with Carrying Math games for the young. In clear
plastic sleeve.

t Sam the Sea Serpent Sammy will devour your child if he
gives the wrong answer! (Just Kidding
!!). A story and game for your young
ones.

**Thorn EMI -- love their packaging....beta-like plastic containers
(and we all know where beta is)

t Compute 4 & Reversi Connect-4 game and "Go" type game

t Cribbage & Dominoes Cribbage & Dominoes...get the idea?

t Darts So safe, you can even throw them at
your Mother-in-Law

t European Scene Jigsaw Like those plastic toys where you
Puzzles Vol2 slide the tiles to get the picture
together.

t Figure Fun Two games to teach multiplication,
division, etc. Five levels, cover most
ages

t Owari & Bull and Cow Computer renditions of traditional folk
games

t Pool Everybody in the Pool !! No, not that
kind -- tournament and eight-ball,
practice included.

t Snooker & Billiards Pool with fewer balls and no numbers.

t Super Cubes and Slip Rubik's Cube and marble maze in
computer form.

5-1/4" diskettes
~~~~~~ ~~~~~~~~~
**Activision

d Master of the Lamps Riddles of music memory and color,
album type packaging

**ALA
~~~~~~

d Dragon's Hideaway Gather the Dragon's eggs...make a
medieval omelet??

**Atari

d Caverns of Mars Primitive Zaxxon in a Martian cave

**Atari Program Exchange

d Galahad and the Holy Grail Fairly well known adventure game, in
ziplock packaging.

d Seven Card Stud Monty Webb's poker game. Ziplock
packaging.

**Avalon Hill

d Divex Another darned "teach your kid" number
stuff... don't YOU ever sit down with
him??

**CBS Software

d Success With Math: Math for grade levels 5-8
Fractions

d Success with Math: Grade levels 7-11
Linear Equations

d Success with Math: Grade levels 9-12
Quadratic Equations

**Cosmi

d The E Factor Save your planet against mimes, aliens
and asteroids!! Sorry, Marcel, oops,
that's "Mines"

**Crystalware

d Imperial Walker Idiotic robot elephant from Star Wars

**DataMost

d Ardy the Anteater Anteater slurping up those ants !

d Night Raiders Blow up the alien spaceships
again...don't they ever give up?

d The Tail of Beta Lyrae Lyrae is blow up the spaceships you
& Round About missed before, Round About .. blow up
strange shapes. Two games in one
ziplock. ~~~

**EPYX

d King Arthur's Heir Camelot adventure game. Has nothing to
do with Royal toupees.

d Temple of Apshai Base for other DUNJONQUEST games.
Includes both cassette version and
5 1/4" disk.

d Upper Reaches of Apshai Another expansion module for Temple of
Apshai. Book of Lore missing.

**Hayden Software

d Final Conflict Futuristic tank warfare game

**K-TEK

d Gorgon Rescue the Golden Fleece with Jason,
beware Medusa, beware this game... it's
Booorrrrriiiinnnggggg.

**KeyPunch Software

d Strategy Simulations Robot Patrol, Star Merchant, Civil War,
Convoy. Sure sounds like public domain
games to me ! In plastic sleeve.

**Learning Company

d Word Spinner Basic building blocks of reading, ages
6 - 10. In cardboard folder.

**Main Street Publishing

d Ardy the Aardvark Same game as above, repackaged in
ziplock.

**Penguin Software

d The Quest Fairly decent graphic adventure game

**Scholastic

d Agent USA Educational puzzle solving adventure
for ages 9 to adult. Nice, but heavy
packaging.

d Turtle Tracks LOGO-type graphics language program
for ages 9 to adults. Also nicely but
heavily packaged.

**Sirius

d Blade of Blackpool Illustrated myth and magic graphics
adventure game. Not bad.

d Fast Eddie Jumpman, Donkey Kong type arcade game.

d Wayout Colorful elaborate maze game. Still
has the CLOWN glasses !!

**Spinnaker (Heavy plastic box packaging...nice, but probably
expensive to mail !)

d Kinder Comp Collection of six educational games.
Boy, are your kids going to be smart !!

d Snooper Troops, Case #1 Kids detective game. Teaches problem
solving, deductive skills

d Snooper Troops, Case #2 Are your kids skilled yet? If not, try
this one too.

**Thorn EMI

d Home Financial Management If you buy all the above, this will
help tell you how much over budget you
are!!

**Walt Disney PC Software

d Mickey & the Great Outdoors If your kid can only learn from a
mouse, this is the one to do it.
More math and literacy skills.
By the way,
BOYCOTT DISNEY/ABC !!!

Cartridges

**Atari

c Centipede Zap the worm and all his parts. Arcade
game.

c E.T. Phone Home Help E.T. find the parts to make
his phone.

c Missile Command Save your cities from alien attack.

c Star Raiders Some more stupid spaceships!

**Imagic

c Atlantis Missile Command under water.

c Demon Attack Space Invaders with flapping wings.

**Spinnaker (once again, nice but heavy premium plastic packaging)

c Fraction Fever Shouldn't 98.6 be 98 3/5 ?

c Story Machine Kind of a "mad lib" for your kids.

**Thorn EMI (Once again, neat little BETA boxes)

c Kickback A soccer-like breakthru game.
Did I mention soccer is like unto
great gasping intakes of air!

c Jumbo Jet Pilot Take your seat at the controls of
a jumbo jet. Fly it upside down...
see passengers grab for Gravol...
mess up the President's $200 haircut..
console Bobby because they shot his
dog before boarding.... JUST KIDDING!

There are a couple ways it can be done...The Black Box has its own..

The MIO has software that banks in and out new memory address for another set of 8 drives and another and another ect..unlimited by menu...depends upon how much money you wish to spend..but each only 16mg per partition.

Someone else can enlighten you on the Black Box and the SIO to PC cable which you can access you IBM with the latter..

Don't Fear's Huge Second Auction (Update 9)

Part 1: 2600/5200/7800

Alright kids here we go!

Notice there are a few new items!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

Asterisk (ampage@geocities.com) wrote:
: I heard about that, but who knows what they'll really do if they buy it?
: They may use some of the technology to enchance their PC's and not
: support Amiga users at all...

Yes, except that their press releases so far have explicitly said they
will run Amiga International as a division of the company dedicated to
Amiga products.

Now, you can lie in a press release, but let's face it--saying something
like that will (and has) cause confusion and uncertainty in analysts and
shareholder. That risk far outweighs the good feelings they're getting
from the Amiga user base. So I think that for that reason, it's worth
taking them at their word for the time being.

: with the intention of restarting production of Amiga models? I have
: suspected that they bought them cheap for access to copyrighted
: technology that Amiga held.

See my previous response to a similar question. There's no doubt that Gateway wants the ex-Commodore patents. They say as much in their press release on the subject. They also say in the same breath that they'll be running an Amiga division for Amiga computers.

Don't Fear's Huge Second Auction (Update 9)

Part 2: Everything Else

Alright kids here we go!

Notice there are a few new items!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

>already spoken for.

Why not? If B&C got 10 of the same rare prototype, I certainly wouldn't have the money to buy them all, nor would I want to. And why would Bruce sell them all to me, anyway? It would be pretty obvious that if I purchased them all, I'd be out to re-sell them. If you know Bruce at all, you know that he tries to please all of his customers. He would want to offer them to as many people as possible. I still don't see the difference between stating: "B&C has a deal with someone" vs. "B&C has a deal with John Hardie"

>Sorry for the misinformation, but what I posted is what I was told.

If you were concerned with the correct info or suspected I had these games why didn't you just e-mail me and ask? I've never withheld info from anyone. In fact, I'm more than happy to provide info I have to people who want it.

>Well, excuuuuuuse me. I didn't think "Atari Gaming Headquarters" had a
>monopoly on providing collector's with information on their hobby.

Atari Gaming HQ doesn't have a monopoly on providing information to anyone. Don't make us out to be snobs. Keita and I share all the information we get with anyone who wants it. I hardly think all the good collecting info comes from us.

All of this is pretty irrelevant to the point I made, which is to please leave my name out of your posts.

John

>
>If I'm wrong please enlighten me. Give me an example from 1981-82.
>>

Ok.... 81/82 almost nothing got done due to the breakup of Consumer
and Computer divisions. Most of the experience stayed in Consumer, and
the Home Computer group brought in a bunch of Managers to create their
own empires. Prior to 81 all stuff was done pretty much in house
(except the programming languages....all done out of Atari). After 83
when the groups merged back, development was full bore on the Computer
stuff in house again.

While I like Chris alot, I stand by the above statement. The 2600
programmers would just bash this dude.

Chris was very instrumental in getting info out the door regarding the
400/800. He spearheaded documentation like the above, as well as the
APX program. Of course Chris was just as good at promoting himself at
the same time :)

As for royalty checks, Todd Frye who did VCS Pac-man taped his first check to his office door. I passed him in the hall one day and called him Mr. Pac-man (he knew that was a slam). He replied "you can call me Mr. Pac-man, in fact call me Mr. Asshole.....but I'm laughing all the way to the bank"

>

CORRECT!

This pissed alot of people off. This eventually became Alan Kay's group and they worked on the mythical "Sierra" Computer. Advanced Products Group I believe was the name.....big waste of money! Oh, Let's not forget that Amy chip!

Chris lives up in the San Jose hills, we visited him last year to pick up a copy of a 2600 game called "Wizard". I forgot what he was up too, but by the looks of things he is doing OK. Still the same Chris, and still a nice guy.

Thanks for the reply.....didn't mean to insult you if I did.

Do YOU even know what you're talking about here? I sure don't.
Jesus has nothing to do with it. I took his name in vain.

>Funny, I am a member of the public and I had no such knowledge of your
>special status at B&C. I rather enjoyed the information you
>insultingly refered to as "ramblings."

Maybe you should have asked. Bruce or I would have told you. Was it
necessary to know it was me, or would it have been enough to know that
someone out there has a deal.

>Translation: you would prefer to have your special deal with B&C be a
>secret and NOT be public knowledge. That's understandable, but you
>cannot expect others to operate accrding to your desires. If I were

>the people he brought it up to. You stating here in front of everyone
>how "public" the knowledge was is an insult to the collective
>intelligence of most of the people that frequent this newsgroup.

How would you like it if someone you didn't know posted a message
concerning your dealings. You can choose to defend Andrew for whatever
reason you want, but I'd bet if it was you instead of me, you wouldn't
be so understanding. Also, just because you didn't know, does that
make it some big secret? Am I supposed to make major announcements to
the newsgroups so everyone can track my deals. If that's the case,
then here's another "secret"

MAJOR ANNOUNCEMENT --- ALL TAKE HEED

John and Keita have a super secret deal going on that each of them has
first crack at any of the other's duplicate carts.

Now you can't say that you didn't know.

>Getting facts straight is always a benefit. I say truth and accuracy rule.

> Cheers,
> Jon

I agree.

I thought SpartaDOS X for the Atari8 was the most powerful OS for an
8bit. I admit I never had any knowledge of OS-9 for the CoCo though.
How much experience with X do you have with an Atari 800? Most people
with 800's don't use SDX. I was always impressed the same way with
BASICXL/XE, Action!, MAC65, as the best most powerful tools of their

kind written for any 8-bit. My 8-bit experience only covers the Atari line, the Apple II family, and the CBM family though. What kind of features did OS-9 have that made it so outstanding?

Cheers,

Jon

Does anyone remember a game similar to Centipede (i.e. "snakes" moving on
a grid, which you have to shoot etc.), but with a 3D-View? I can't remember
much more about it, but it annoys me that I can't remember the game's name!

Someone help :-) (please mail, I might forget to read this newsgroup...)

Thanks,
-nino

3153. AUC: Analog Computing - Atari 8-bit magazines NEW

Newsgroup: comp.sys.atari.8bit

That's the real beauty of the Rainbow emulator. Even the disk drive
sounds are there! I agree that it's not quite as good as an original
800, but pretty darn close. Now if rainbow also ran in full screen
mode......

>respect to revealing information (especially names) that might
>not be appropriate to share with the whole world.

You don't get to decide what is appropriate and what isn't, and
neither does your clollecting bud John. I found John's public post
complaining about his name being used to be out of line. Now, that's
just my opinion, but at least I had the respect enough to say it was
my opinion. John, and now here yourself, are insulting to the
readership here and also arrogant when you think that your opinion is
gospel. Right here in front of me I am reading your implication that
somehow your version of common sense is superior to any who may
disagree.

>For example, I know the owner of 2600 Tempest, and personally
>know others who have prototype hardware and carts. Out of
>respect of their privacy, however, I do not share this info.

That's fine. Good for you. I don't care if you do or don't. That's
between you and them. I too would keep someone's confidentiality if
they asked it of me and I agreed to it. The whole reason I got
involved here is because the way I see it goes pretty much like this:

- Bruce let John get 1st crack.
- Bruce told that to Mr. Krieg

- Mr. Krieg passed that along to the newsgroup, after a lot of discussion of such carts and people who like to trade, collect, or sell them.
- John didn't like that fact being revealed to everyone, probably because he likes his special situation, and worries that if others find out about it he may get competition.
- John chose to publically berate Mr. Krieg for doing something not in accordance John's prefernces in life. Seems to me, that Mr. Krieg doesn't owe John favor #1. All Mr. Krieg did was tell the truth. So it kind of pissed me off to see John piss down Mr. Krieg's back in front of me and everyone else in here, because he might be worried that somehow maybe his little sweetheart deal is exposed->competed for->taken away from.
- John also stated that his sweetheart deal was "public" knowledge and no secret. That insulted mine and presumably most of the readerships intelligence in here, because it is precisely how non public and unkown that deal was that John was pissed off that it was exposed.

Now you come in here implying that people like Mr. Krieg and myself, somehow lack courtesy or common sense if we don't keep our mouths shut for you. If someone asks me to keep quiet about something, I consider the request and usually grant it. I think it is an asshole who EXPECTS people to obey their self styled gag order. Ask nice, make a deal for silence, or whatever, but don't EXPECT others to do as you bid automatically.

>In Mr. Krieg's case, he could've easily provided the B&C info
>without naming names. I believe it to be malice on his part
>(or sour grapes) when he chose to specify who it was.

Okay, say he has sour grapes. I'm not saying he does or does not now, just a what if. Say he is jealous of John's sweetheart deal. Why the hell if someone tells him about it does he OWE John any favor? If Mr. Krieg was told about it on the condition of keeping it quiet, then I'm in your corner, but this does not seem to be the case.

>>>I don't remember ever posting about your business, Andrew!
>>>While my deal with Bruce is public knowledge and no secret, I would
>>>still appreciate being left out of your inane ramblings.
>
>>Funny, I am a member of the public and I had no such knowledge of your

>>how "public" the knowledge was is an insult to the collective
>>intelligence of most of the people that frequent this newsgroup.
>
>Translation: Apparently the term "COURTESY" doesn't apply to
>you.

I consider myself very fair and very courteous. I take umbrage to
your claim that I am anything other than that, simply because I
disagree with your protectionist philosophy.

> When someone has a source for getting good stuff, others
>are bound get get irritated or jealous of said individual
>when they find out who it is.

Yep, and that's their God given right to feel that way. If John
doesn't want to be envied, then he shouldn't accept such special
treatment. He shouldn't expect others who learn of his situation to
have to help him hide it from everyone.

>John was thrust in front of
>the public eye against his wishes. Can't you respect his
>wishes?

I find it helpful in respecting someones wishes when they show respect
for someones right to choose whether or not to respect their wishes.
Wow, what a tongue twister. What I am saying, is that John never
respected Mr. Krieg's right to choose to grant him favor or not. John
just flat out DEMANDED that his wishes be observed, and in my opinion
tried to punish Mr. Krieg by publically berating him here in this
newsgroup; the act of a greedy selfish child. I understand his desire
to be low key, I really do. He could just as easily sent a private
email to Mr. Krieg asking him nicely if he would refrain from
referencing him in the future. That would have been the adult thing
to do.

>For the newsgroups to be a friendly forum for
>discourse all of us need to be a bit more selective in sharing
>the "FACTS." In this case, Andrew's mention of John was neither
>appropriate or necessary to get the basic gist across to the

Maybe, maybe not. It is irrelevant though. He did nothing wrong by
doing so.

>John and I have been avid collectors of Atari memorabilia
>for over ten years. During this time, we have accumulated

>Hustler: John has integrity? I guess you never heard of the time
> when he was dissin' you in front of a few folks. Trust
> me, he's a bullshitter and dishonest.
>

Has John cut down Bruce behind his back? Just curious. Anyway, do you not give Bruce enough credit to analyize the potential untruthfulness to such statements if they were to be falsely made? Or is it that you do give him such credit but it is precisely because such nasty things may have been said? Anyway, I don't really care. I'll never tell a lie to Bruce or anyone else about you or John and I don't think most people would do such a thing.

>This is a TRUE story. Not to say that occurances such as the one
>above are rampant, but they DO occur.

I see your point, but at least give Bruce some credit for some brains, and Mr. Krieg some credit at getting to decide what favors he grants and for whom.

Cheers,

Jon

>Duke is a load of fun. So is quake.

I don't know about Quaek, i can't play it cos my 486/80 is too slow.
>:(

Even Duke on my computer running at low res in pure DOS mode is a bit
choppy on most boards, and on some other user maps--especially those
that have a lot of objects and weapons and stuff in the middle--it
gets VERY choppy, sometimes to the point where it's completely
unplayable cos the system bogs down too much (particularly if there
are lots of people and monsters pounding the hell out of me).

There's the rub, I suppose. Whereas Atari 8-bit computers may not
have the monopoly on fun-to-play games, they (and a handful of other
older machines, I guess) have unbeatable fun-per-MIP ratios.

Who knows, maybe somebody will port Doom or Duke over to the 8-bits
someday........

>
>I don't know about that. Multiplayer Duke Nukem 3D is AWFULLY
>fun........

Exactly. I see many people claim that Quake is boring and not a good game, because it's just Doom all over again. Almost universally they have not yet played it against other people. The major focus in games these days is multiplayer, which is an entirely different thing from games that are fun to play by yourself.

Quake's other claim to fame is the incredible flexibility and extensibility of its game engine. People have done crazy things to it, like "Quake Kart" where you tool around in armed jeeps. The ability to create your own levels for a game has been around for a very long time, but only now are computers fast enough that realtime action/arcade games can have their own miniature programming language which lets the user completely change how the game acts, within the limits of the video/sound engine.

I could try scanning in the source from my copy of the software manual. I think it's all there. I think, as long as it is saved as raw text, it could be imported into MAC/65 then assembled. Would that do? If so, let me know. It will take a couple of days to clean it up. My OCR software isn't the best, but it works enough to get the job done.

All,
Just a quick announcement that on April 26 and 27, there will be a huge computer/ham fest at Mercer Count Community College West Winsor, NJ (Just east of Trenton, NJ) This is the largest/ longest running computer fest on the US East Coast! There will be over 1000 outdoor vendor spots, over 400 indoor vendor spaces, over 100 seminars/forums/talks, Internet for kids, a Festival Dinner with almost everyone leaving with a door prize(once I won a 2x ISA CD-ROM drive) and much much more.
I will be hosting an Atari 8-bit seminar on Sunday afternoon. The discussion will include PCXformer 3.6, The Internet and BBSes. Come, and find those hard to fine 8-bit deals in the flea market. Last year I found a fully functioning 130XE w/PS and SIO cable for $5.00. Not too ban. A couple of years back I bought an 800XL, XF551 and 1050, all w/PS and cables for $27.00. There are lots of sellers that have 8-bit treasures, not to mention all the other neat items old and new.
That's Saturday April 26 10am to 6 pm and Sunday April 27, 1997 10am to 4pm. Admission is $10.00 for both days (adults) $5.00 sunday only, Seniors and students $5.00 for both days and Children under 12 are admitted free on sunday (if accompanied by an adult).
Pre-schoolers are always admitted free.
For more info call 1-215-957-4000 or check the web site at WWW.TCF.NET.

hell, i thought, only my XE was that badness. Seems to be a generic XE
problem! The only way to get a better screen was a video monitor.

Jon,

Since I have seen/received messages saying enough of this in the newsgroup, this will be my last post. You can contact me in e-mail if you wish to continue this foolishness.

ssilicon@lax.net (Jon D. Melbo) wrote:

>You don't get to decide what is appropriate and what isn't, and
>neither does your clollecting bud John. I found John's public post
>complaining about his name being used to be out of line.

So my post was inappropriate in your opinion. I guess you're the one who gets to decide what's appropriate and what isn't?

> John, and now here yourself, are insulting to the
>readership here and also arrogant when you think that your opinion is
>gospel. Right here in front of me I am reading your implication that
>somehow your version of common sense is superior to any who may
>disagree.

Hmmm. Seems you do a lot of talking on behalf of the readership. I didn't realize you were the spokesman of the group.

>That's fine. Good for you. I don't care if you do or don't. That's
>between you and them. I too would keep someone's confidentiality if
>they asked it of me and I agreed to it. The whole reason I got
>involved here is because the way I see it goes pretty much like this:

>- Bruce let John get 1st crack.
>- Bruce told that to Mr. Krieg
>- Mr. Krieg passed that along to the newsgroup, after a lot of
>discussion of such carts and people who like to trade, collect, or
>sell them.
>- John didn't like that fact being revealed to everyone, probably
>because he likes his special situation, and worries that if others
>find out about it he may get competition.

I don't worry about it at all. Bruce and I have been friends for years. There is no competition.

>- John chose to publically berate Mr. Krieg for doing something not in
>accordance John's prefernces in life. Seems to me, that Mr. Krieg
>doesn't owe John favor #1. All Mr. Krieg did was tell the truth. So
>it kind of pissed me off to see John piss down Mr. Krieg's back in
>front of me and everyone else in here, because he might be worried

>that somehow maybe his little sweetheart deal is exposed->competed
>for->taken away from.

There you go, acting/speaking on behalf of the newsgroup again.
I wasn't worried.

>- John also stated that his sweetheart deal was "public" knowledge and
>no secret. That insulted mine and presumably most of the readerships
>intelligence in here, because it is precisely how non public and
>unkown that deal was that John was pissed off that it was exposed.

Since you seem to be the official spokesman (self-appointed, I'm sure)
of comp.sys.atari8, rec.games.video.atari and rec.games.video.classic,
please pass my apologies to the readership if I insulted their
intelligence.

How many dust mites are in the average bed?
How much oil do we get from Kuwait?
Who was the last team to pull a triple play?

You don't know? Why not, it's public knowledge!

If you had a conversation with Bruce like Andrew did, you would have
known about my relationship with him.

> Ask nice, make a
>deal for silence, or whatever, but don't EXPECT others to do as you
>bid automatically.

Can't ask nice if the message was already posted.

>Okay, say he has sour grapes. I'm not saying he does or does not now,
>just a what if. Say he is jealous of John's sweetheart deal. Why the
>hell if someone tells him about it does he OWE John any favor? If Mr.
>Krieg was told about it on the condition of keeping it quiet, then I'm
>in your corner, but this does not seem to be the case.

Again, you seem not to grasp the concept of courtesy. It has nothing
to do with favors.

>I find it helpful in respecting someones wishes when they show respect
>for someones right to choose whether or not to respect their wishes.
>Wow, what a tongue twister. What I am saying, is that John never
>respected Mr. Krieg's right to choose to grant him favor or not. John
>just flat out DEMANDED that his wishes be observed, and in my opinion
>tried to punish Mr. Krieg by publically berating him here in this
>newsgroup; the act of a greedy selfish child. I understand his desire
>to be low key, I really do. He could just as easily sent a private
>email to Mr. Krieg asking him nicely if he would refrain from
>referencing him in the future. That would have been the adult thing
>to do.

I think you better look again at the facts. I never respected his
rights? I demanded that my wishes be observed? Kind of hard to do when

the message has already been posted.

>So that entitles somehow entitles you to what; everyone's obeisience
>and cooperation to ensure that you stay on top?

On top of what?

>Has John cut down Bruce behind his back? Just curious.

Not likely.

As I said before, the fact that Bruce told Andrew without any prompting about our supposed "deal" should give you an idea of how secret it was. All I asked from the start is that my name and dealings not be brought up in someone's messages. Others don't have to submit to public postings of their business, so why should I?

That's all from me. If you still have trouble comprehending this concept, feel free to e-mail me.

John

3170. Game screen shots (04/01/97)

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-02 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <33420cdb.6088436@nntp.ix.netcom.com>

I have just added 63 new game screen shots for the Mattel
Intellivision to my WWW site. This brings the total number of
ORIGINAL screen shots on-line to 1546, for the following systems:

Atari 2600, Atari 5200, Atari 7800, Colecovision, Mattel
Intellivision, Magnavox Odyssey2, Emerson Arcadia 2001, Bally
Astrocade, Atari 8-bit computer, Commodore 64 computer, Commodore
Vic-20 computer, Texas Instruments TI 99/4a computer, Radio Shack
Color Computer, Tomy Tutor computer, 3DO, Sony Playstation, SMS, NES,
SNES, TurboGrafx-16 / TG CD / Duo, Sega Genesis, Nintendo 64, Sega
Saturn, Atari Jaguar, Philips CD-i, and Nintendo Game Boy.

More will be added as I have time. Eventually, I will have my entire
collection on-line (hopefully before the turn of the century) :)

Next, I'll probably finish up the Atari 7800, Odyssey2, Colecovision
and Atari 2600 sections.

If this is of interest to you, then pay a visit to:
http://www.io.com/~vga2000/

Michael

P.S. And before anyone else asks; if the game isn't on one of my FS/T
lists, it isn't FS/T :)

>>
>
>Nonetheless, sometimes it works. In fact, with my PC drive and XF551,

You have to look carefully at what I said up there. The usage I
described does not cover all situations that are involved in sharing
disks between the different types of drives. The situations it does
cover though, you would find errors up the ying yang if you didn't
stay away from. Perhaps I can visually illustrate what I was trying
to say:

///// = data written by 1.2MB floppy drive
\\\\\ = data written by 360KB floppy drive

Figure A - 1.2MB HD head/track data width:

Figure B - 360KB head/track data width:

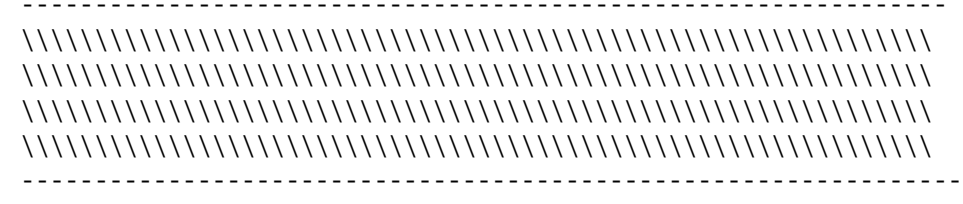

Figure C - data written by a 360KB drive on top of data written by a
1.2MB drive (notice the data written by the 1.2 is completely
overwritten)

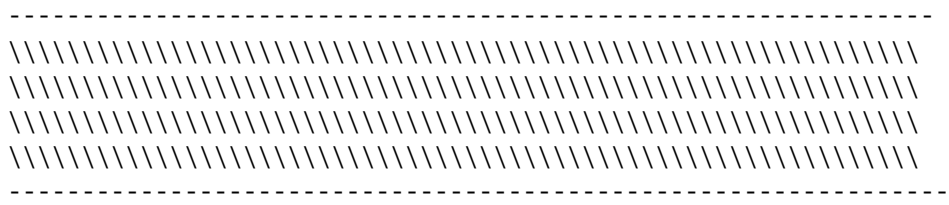

Figure D - data written by a 1.2MB drive on top of data written by a 360KB drive (notice the narrow head of the 1.2 cannot completely overwrite data left by the 360)

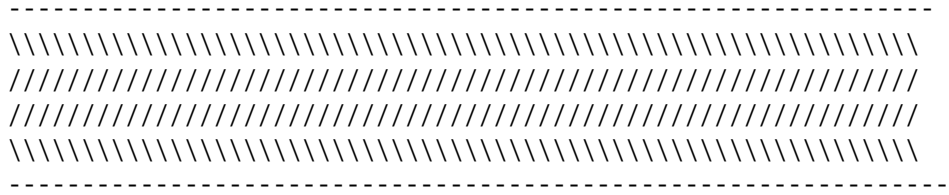

Figure E - Physical head sizes

1.2MB 360KB
[ ] [ ]

Okay. Now then, a 1.2MB drive is capable of reading disks from any of the figures A,B, C or D. This is because its read head is picking up its data from the narrower center portion of the disk. On the other hand, a 360KB style drive can only read data reliably from disks made by figures A,B, or C. The kind of track data you end up with in figure D causes a serious read problem for the wider heads of a 360KB drive. This is because in addition to the new rerecorded data put in the center of the track by the 1.2MB drive, there is still old data on the outer edges of the track that are left over. The 1.2MB drive, although it can be made to use the correct write volatges and all for 360KB operation, it cannot overcome the physical limitation that it's head is narrower than that of a 360KB drive.

So a basic rule of themb when sharing 360KB floppies among 360KB & 1.2MB drives is: Never do any writes with a 1.2MB drive to a disk that has been previously written to in a 360KB drive....UNLESS... you only plan on ever using that disk in the 1.2Mb drive from then on out. Of course a disk can be reformated in a particular drive any time for use in that drive. As long as you follow that rule, you can utilize the backwards compatible 360KB modes that most 1.2MB drives offer.

So why guess with sometimes and maybe's anymore? :)

Cheers,

Jon

"Michael Current" <mcurrent@carleton.edu> writes:

> (That's using the original Atari joystick too, not any of those more
> expensive but inferior imitations. :)

Heheh, I am *finally* learning to appreciate the virtues of the licorice stick, though generally I still prefer a Wico baseball-bat handle.

I find the Wico red ball joystick to be a little clumsy, and the grip-handle ones only suited to a handful of games. The grip-handle is better for enhancing the illusion of games like Star Raiders than for improving your game, in my experience. The baseball bat stick I find supremely ergonomic. All of the red-handled Wico sticks are virtually indestructable.

Other joysticks I like:

The Amiga one; can't remembe it's name. The two I have in my junk-box (both found separately at thrift stores) are excessively worn though. I really think these have a pretty, elegant, and functional design. Too bad they apparently get "mushy" with use. These are such a lovely match for my 64K Super Video 600XL that I keep them around though and would love to find a pair in better condition.

Somebody made a red ball joystick with microswitches that clicks nicely. The stick was one piece of red plastic, unlike the Wico red ball. It had fire buttons about 2cm in diameter on both the left and right sides. I've seen these in thrift stores and they seem pretty good but I've sworn off acquiring unncessary gear... :)

The Suncom joysticks were pretty good; I have a Suncom Starfighter for my PC and it works reasonably well for some games. Overall, I am pretty disappointed with the IBM joystick interface, and am sick of hearing analog joysticks described as an advance.

BTW, does anybody know of a source for parts for Wico joysticks? I have a couple with damaged cables and don't feel like building my own cables for them if I can order a Wico cable somewhere.

OOPS! The file is called HAPPY7.ZIP. It includes the Happy 1050 docs in 5 different formats, including Winword 6, RTF (Rich Text Format), Raw ASCII, Formatted text (nothing special) and ATASCII text (EOL's instead of paragraph marks). I don't remember if the ARC version of the same file is there. If it is it would be called HAPPY7.ARC.

From: idavis@comland.com
Message-ID: <859993266.5698@dejanews.com>
Source record: 74259

As everyone knows, I have been pestering people in this newsgroup for weeks about information on burning eproms, and haven't been having much luck. Well just for the record, I managed to burn an eprom last night, and it worked. I have an eprom cartridge board for the 28 pin eproms - 2764's and up. I bought some 2764's and took them home. Since it is an 8k chip, I decided to burn a copy of basic onto the chip and see if it worked. After fumbling a couple of times with rom files that I had read from my basic cartridge, I decided to try the ataribas.rom file from xformer. I burned it onto one of the eproms, put the eprom in the cartridge, and voila, it worked like a charm. Now that I know I am not suffering from incompatibilities with chips and boards, I can actually put a program of mine onto a cartridge. I get the feeling that for once, I will be plugging in the assembler editor more than the basic cartridge. And to top it off, to make it that much more of a great experience, I pulled alongside the Weinermobile on the way to work this morning. I think I will go buy me a lottery ticket at lunch.
I will be writing up some of the information that I had absorbed while working on this project and posting it to my web page as soon as I get a little more comfortable with the whole eprom process. Thanks for the help everyone, this is definitely a lot better than when I started with my atari in 1983. I was isolated and didn't know a soul to ask for help. This is what newsgroups should be used for.

Heh, it also needs to properly restore the screen mode on exit.
So far, no Atari emulator I know of does that.

Um... No... I don't know where you heard that. I have 3 working
TI-99/4A's, one of which was my first computer, from 1983...

3185. ***WHO IS AGENT ACTION!?***

1
** "CLONING" MOVIE MAY PROVOKE THEATER RIOTS! **

Anticipation is so high for the new sci-fi action movie AGENT ACTION!
that international theater owners are worried. Some feel their venues may be the
magnet for riots. One of the movies main themes is human cloning. With cloning
as a red-hot topic and the movies anticipated big budget look with gorgeous nude
US playmates, the number of moviegoers is predicted to be record breaking!

AGENT ACTION! is reported to be a sci-fi flick in the secret agent
"Bond" Style. It sports exotic locations, impressive cinematography, and the
aforementioned naked, big-breasted actresses. (Including Erika Olsen / Playboy
Mar 97) The movie stars and is directed by charismatic and multi talented new
leading man William Blair. It features celebrity guest villains and co-stars the
talented Jerry Lee Kmiec.

AGENT ACTION! is currently in the middle of a heated bidding war by international
distributors. The winner may have more than just an ordinary hit on its hands.
It may have the milestone catalyst of an international event.

****
****

2

OSCAR PICK FAVE FOR 97 ? AGENT ACTION!

Talk for the next Oscars has already started. And the news is overwhelming for
one film: AGENT ACTION!

What "ACTION" seems to have is what the current Oscar picks lacked: both
great directing, great acting, and great writing all in one. And the lions credit is
aimed at one man; multi -talented star and director William Blair.l

Insiders are predicting Blair may receive the most multiple Oscar wins ever:
As best actor, best director, and best writer. What's more: as producer and special
effects director of photography consultant: he might also nab the best picture Oscar
and cinematography Oscars, too! Can Blair and AGENT ACTION! pull off this
unprecedented feat?

It would certainly be a day for the all time record books. Of course this is
just speculation at this point. One thing is certain, though, 1997 is the year for
moviegoers to enjoy AGENT ACTION!

3

CAN AGENT ACTION! CRUSH SCHWARZENEGGER?

One fact seems clear: William Blair is the world's hot new action star!
Not only that, he appears to be a World-Class director as well. It is this multi-talent capability- and freshness- that has Schwarzeneger and Stallone scared - yes, the world seems to be saying, replace these old fogies with new talent!

William Blair, and AGENT ACTION! seem to be the cure for the movie goers case of tired old action star Blues! Arnold / Sly - next stop is the old folks rest home for you!

We're William Blair fans now! Long live # 1 action star William Blair! - AGENT ACTION!

//

4

SEX, NUDITY, AND AGENT ACTION!

For the many curious to see big breasted naked actresses in AGENT ACTION!,- there is good news. A preview/trailer is now reportedly in the cutting stages. This minute and a half of selected scenes should wet the palate of the curious.

AGENT ACTION!, a "Bond" type thriller set in the near future, is highly anticipated. It reportedly features the aforementioned Big breasted actresses (including Erika Olsen/ Playboy Mar 97) among several other ravishing beauties.

The movie is said to star and be directed by multi talented new leading man William Blair. Celebrity guest villains round out the colorful cast.

The movie apparently also features lush exotic locations from around the world. Excellent cinematography and a tight nit thriller story round out this highly anticipated production.

This is probably the most anticipated movie on the planet today. And the thought of a trailer - possibly soon downloadable on the net - is fantastic. But hurry please! The wait is almost more than curious movie buffs can bear!

********** ////////////////////////// ********** //////////////

5

JAPANESE "ABREAST" OF AGENT ACTION!

Tokyo. If there's one group of moviegoers clamoring to see AGENT ACTION! - It's the Japanese. They certainly have a yen for big breasted naked blondes - and AGENT ACTION! will supply that - and more!

Nippon theater owners apparently are in a rare fight to obtain the first prints of AGENT ACTION! It is said to be the most anticipated movie in the Orient.

6

WHY DOES AGENT ACTION FEATURE NUDE BREASTS?

'Cause Secret Agents love them! How could Sean Connery, Roger Moore, or Pierce Brosnan battle villains without a little jiggle? And the same goes for new Agent extraordinaire William Blair - AGENT ACTION!

++

7

RUSH - FOR WORLD WIDE RELEASE

IS AGENT ACTION! THE GREATEST MOVIE EVER MADE?

Film fans, critics, and cinephiles the world over are engaged in a heated debate. Is the new Sci-fi action film AGENT ACTION! the greatest movie ever made?

Opposition is fierce. Names such as Welles, Kubrick, Scorsese, Spielberg, and Oliver Stone are of course getting huge support.

Movies such as Citizen Kane, 2001, Goodfellas, ET, and Platoon are being heralded as the all time champs.

And yet, the new found furor won't subside. AGENT ACTION! now has its own legions of rising vocal fans. And its star/ director William Blair is receiving the lion's share of the credit.

Can this new group of fans, of a movie not yet even released be right? Can the few purportedly bootlegged copies of an advance rough cut be enough proof? Is AGENT ACTION! such a highly commendable piece of celluloid?

History be damned these new fans seem to be saying. Forget the work of the "old fogies", William Blair Is the brilliant purveyor of cinema's future!

And AGENT ACTION! is proof - at 24 frames per living color second!

==

8
SEX, ROMANCE, AND AGENT ACTION - WILLIAM BLAIR!

Girls, Good News - William Blair is single! Yes the 6 ft, 185 lb. leading man is available! And if his blue eyes don't get you - his charming and suave manner will! Check him out in AGENT ACTION! Then in his exciting new upcoming feature THE RIDE!

((((((

The movie world landscape is now upside down. How? Witness ancient releases like Star Wars now doing first run BlockBuster business. Plus expensive new releases are bombing. With this confusion its a new war out there. And formerly defended movie turf is up for grabs!

Which studio army can capture the anticipated blockbuster AGENT ACTION!?

Will it be a major battaliion force like UNIVERSAL? Of can a rising guierrila army like Miramax or Gramercy capture the goods?

No one can predict the battle's outcome yet. But one victor is certain: the Audience. The World Audience - millions of popcorn and action loving troops who will be the happy victors as they embrace viewing AGENT ACTION!

^^

10

WILLIAM BLAIR - TRUE INDEPENDENT - NOT SUNDANCE ASS- KISSER

While most Independent filmmakers nowadays are just shameless ass kissers - of Sundance "god" Robert Redford, William Blair stands alone.

The so called Independent movie movement is sickening. Independent - Independent of what?

Most of these films are undisguised "auditions" for studio jobs. And the cast lists of these movies look exactly like their Studio cousins: Tori Spelling for godsakes!

And most of these butt-kiss directors need to start living a life - rather than patterning these grotesque homages to angst populated by the ever tiring Steve Buscemi (Whoever said this guy could act?)

The real barfola however, is how the "intelligensia" and "psuedo hip" are pronouncing Oscar kudos on these lightweight nothing movies.

Lets face if folks: Ransom was a much better film than Fargo. Wake up you morons. Can anyone even sit through Fargo twice without falling into a deep coma.

And last years Spitfire Grill - what a joke that was! It had all the thrills and technique of a bad TV movie of the week!

Is there hope? Damn tootin!

And my vote for movie of the year is AGENT ACTION! It cuts the sprocket holes off those "independent" lemming-ized ass-kisser movies .

: Which makes me wonder... could you port unix to the Apple II? :)

Well, the 6502 is not as bad as it seems :-)
But a full featured Unix is probably too much.
Some small (preemtive, single user) multitasking systems
have already been implemented on the 6502.

Have a look at
http://www.tu-chemnitz.de/~fachat/c64/links/
and then "6502 Operating Systems"

so long
Andre

Some of the early ones did have a power supply that could self
distruct. TI issued a recall and repaired/replaced just that section.
It wasn't too many, just one production run, but they did have a couple
of fires reported.

Hi Everyone, another old Atari 800 user here!
Loved the damn thing, its still in it's original box downstairs
however I also have alot of old Atari Disks loaded with games.
Yes Doom is alright, the Neverhood is neat, G-nome is okay BUT
I've got cravings for Defender, Joust and Star Raiders.
I know there are alot of Emulators out there.
I've now got a P-166 MMX running Win95 and downloaded Gemulator96(Demo)
but can't seem to make the damn thing work.
Any help would be appreciated.
Rob.

(well not all of it, but quite a bit)

Anyway, I've got to make some space in my closet so I'm selling some of my
Atari hardware:
Atari 400, 800, 810, 1030 (modem), all w/ manuals, + some extra stuff.

It's on the AuctionWeb at: http://www.ebay.com/aw-cgi/item.cgi?item=jxu8322

Thanks
Mark

Don't Fear's Huge Second Auction (Update 11)

Part 2: Everything Else

Alright kids here we go!

Notice there are a few new items!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

Please, stick to the newsgroup. My computer download newsgroup messages automatically from this newsgroup and others I am interested and need the information. It really hurt to see download time
($) and hard drive space waisted with your argument.

Please, go private. Leave the newsgroup for information only, I will really appreciated.

Thanks!

> I've got cravings for Defender, Joust and Star Raiders.

Yeah these games are great!

> I know there are alot of Emulators out there.

There is a "little" choice of ATARI 8bit emulators. Every Emulator has its own "great" thing. In my point of view XL-it is the very best atari XL emulator (love the sound most). But in some cases Xformer seems better (has in my opinion a little more stable SIO/CIO emulation...) but I use XLIT.

> I've now got a P-166 MMX running Win95 and downloaded Gemulator96(Demo)

Hmmm Gemulator isn't an 8bit EMULATOR, but an ATARI ST emulator. A great one; but for this DEMO you need the Developpers version of TOS 1.4; Darek tells a 1.0 TOS on disk is ok either, but THAT TOS won't run with my Gemulator 96 demo, but the Developpers Tos 1.4 is doing great here.

I must say the GEMULATOR is very GREAT, but I prefer an ATARI 8bit emulator above the ST emulating. Especially in THIS newsgroup <GRIN> (8bit)

> but can't seem to make the damn thing work.
> Any help would be appreciated.

Get the Devoloppers version of TOS 1.4, rename it to TOS.IMG and place it in your ROOT!!

3200. for sale

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-03 00:00:00 UTC
From: bx557@torfree.net
Message-ID: <E81M9x.3wx.0.bloor@torfree.net>
Source record: 74131

I have the following items for sale:

Software:

Print Shop Companion (Atari version) with box and manual. $8

Your Personal Net Worth, 3 disks, manual, plastic case. $5

Hardware:

Winner joypad, originally for IBM-PC, modified for use with Atari 8-bit. It would probably also work with a 2600. It works with any game. I built this myself. $8

Zenith ZVM121 monochrome (green) composite monitor. $12

Audiotronics monochrome (amber) composite monitor. $10

Take both of the above monitors for $20

Star SG-10 printer, 9-pin dot-matrix. In original box, with manual.
Great condition, hardly used. I'll throw in a few spare ribbons too. $22

Okidata Microline 182, 9-pin dot-matrix printer. with ribbon. $10

Prices do not include shipping. Shipping is from Dayton, Ohio. I am not in Canada. Please reply to bx557@torfree.net

Hello all,

I am hard at work writing DIMS'97 and want to be able to include support
for the large disk images found at Yogi's site. If anyone has the
file-format for these files could they possible e-mail them to me at
blackat@direct.ca

I am also looking for the exact, up to date specification (including any
and all patches) for the ATR file format itself (the first 16 bytes).

Thanks,
Will Fisher

3206. Re: TCP/SLIP for 6502

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-03 00:00:00 UTC
From: Glenn Saunders <krishna@primenet.com>
Message-ID: <5i04sl$cbb@nnrp1.news.primenet.com>
Source record: 74137
Cross-posted to: comp.sys.cbm,comp.sys.atari.8bit,comp.sys.apple2.programmer,comp.arch.embedded

The 6809 is far more suitable for a preemtive multitasking OS than the 6502, hence the CoCo3 and OS-9.

The 6502 is a little too stripped down and bare bones to handle this effectively, but the 65816 might be able to handle it.

3207. Re: ATTN YOGI! (Well, you said to do this to get your attention.....)

: 8bit. I admit I never had any knowledge of OS-9 for the CoCo though.

Nah, SpartaDOS X isn't even an OS, it's a DOS. I'm no expert on it, but it seems OS-9 is like a stripped down unix. It's preemtive multitasking and it handles the banked and segmented memory of expanded CoCo's very well. Some CoCo's have as much as 512K in them and I believe you can just load them up with tasks and run them concurrently without worrying about 64K limits.

SDX was really just a clone of MS-DOS's COMMAND.COM, and although it's cool and all, it doesn't really add that much functionality to the operating system. Neither does Diamond GOS, which was more specifically aimed to do so.

Basic XE as the closest the 8-bit ever came to really using expanded memory productively by being able to run programs larger than 64K. And SNAPSHOT was the closest we came to a real OS advancement (task switching).

I'm not meaning to be insulting. I'm being OBJECTIVE. Go look at an Aminet site and see what kind of support is there just from shareware authors alone.

One of the big reasons I stopped using the 8-bit as my main machine was because of waning support like FTE coming to naught and Bob Puff stopping development of the Black Box and going into veritable semi-retirement as a developer.

Aside from emulator discussions, it's pretty slow around here.

Incompatibility with existing apps was unavoidable. 80 collumn apps were going to have to be written specifically for it. But products like Bob Puff's network cartridges show that you can access carts for fast I/O and not interfere with other stacked carts (although Mapping the Atari doesn't tell you how).

: So, Get your brain-dead decisions right, it was leaving the ECI/PBI off the
: 65XE that was brain-dead :)

Atari Corp. didn't realize that companies like Supra and ICD were working on PBI devices, doing what Atari SHOULD have been doing so they just stopped providing ECI by the time the 65XE and XEGS came out. I know I would have loved to be able to plug my Black Box into an XEGS.

Yeah... get an XL machine :) <grin>

Seriously though mushy XE keyboard were awful. Almost as bad as the
membrane Atari 400 keyboard. I don't think a replacement keyboard for the
130XE was ever developed, or if it was nobody really talked about it.

3212. Re: 8-bit BBS software <Carina BBS>

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-03 00:00:00 UTC
From: Glenn Saunders <krishna@primenet.com>
Message-ID: <5i09q5$jmk@nnrp1.news.primenet.com>
Source record: 74143

The mortal wrote:
: Carina BBS is not only still around and supported, it is improved upon
on an almost daily basis.

Shadow, this is a total joke. I have been away from your board for nigh
on 3 years now and I decided to check in and see if things have changed at
all. THEY HAVEN'T, right down to the Carina 2.7 1994 copyright date. For
the purpose of correcting misinformation and false-advertising I am here
to inform everyone of the facts.

As for the high-speed support, it sucks. Plain and simple. I had to
practically war-dial to get a successful connect. This probably had
something to do with the way you have your modem configured, but I
should be able to use my stock configuration and not "degrade" my modem
to be able to talk to an 8-bit BBS.

So I connect, and it says I connected at 16.8, which is pretty pitiful as
it is. 28.8 carrier connects should be possible if you had a Black Box.
Port speed can still be at 19.2k as it's the rate between the computer and
the port, not the modem to modem speed.

But this connect rate is meaningless compared to the actual throughput.

You are a MIO user, and therefore you don't have the benefit of hardware
flow control, which is NECESSARY for any modem that sports data
compression (and all of them have for many years all the way back to 9600
baud.) As a result, high-speed connects are going to run into serial
over-runs. I don't care if the MIO has the capability for hardware flow
control, the R: driver doesn't support it and probably never will at this
rate.

But beyond that bottleneck we come to the Carina software itself, which
hasn't been sped up in any significant way as far as I can tell. It still
spits out text in slow and deliberate bursts. There is no real advantage
in calling in over 2400 baud, in fact it actually causes more problems
than anything else.

Which brings me to the file transfers. 8-bit BBSs being limited to
Y-batch I can handle, if they at least worked. Connecting to a high speed
modem causes all sorts of data loss problems, and overall I was only
getting about 200CPS before the errors which is less than ONE TENTH what a
28.8 modem is capable of even without compression, and still far far away
from what a well-optimized 8-bit BBS can spit out (like BBS Express Pro!).
I would at least hope to break the 1000CPS barrier on a high speed
connection but it didn't even come close and the errors would make it only
limp to the finishline.

(And don't tell me this is user-error. My modem connects just fine to my ISP or any other board I call. The rest of the world isn't conspiring to do things the "wrong" way with you the only official "right" way.)

Then you have the translations. There is still just ATASCII and ASCII. The rest are pretty much joke-fodder for being vaporware for so long (see the Settings menu for a laugh--PETASCII, etc...)

And as a Sysop, you don't do much to change the atmosphere. You've got almost all the same text messages as when I left years ago. The only difference I noticed was a warning not to upload at faster than 2400 baud (which is embarassing as it is).

In my entire history as a Sysop of a Carina BBS (at the time, on a 2400 baud modem) the only significant "support" I received from Shadow was the completed PC Pursuit (a service that no longer exists by the way) networking extensions, which wound up costing me a lot of money regardless in LD bills beta-testing it for him.

I had a Black Box and was looking forward to upgrading to 14.4 on the BBS and Shadow was hard at work on the mythical Carina 3.0 upgrade, in which I hooked up Tom Hunt (who is a _real_ coder) to help rewrite the M/L core. Nothing came of any of this, it seems, either to followup effectively with Tom or to rewrite the modules. Lots of empty promises. The reason BBS Express PRO! is fast is because the serial routines are highly optimized and it also uses a special screen (E:) driver to speed up printing to the local terminal. None of this was accomplished with Carina.

Now I like the CONCEPT of Carina, but the current implementation simply doesn't cut it unless you like calling in at 2400 baud.

When it comes to a BASIC-based BBS, Forem XE Pro was in a much more advanced state of development last I checked. It was more kludgy than Carina with a more spartan user-interface, but it handled high-speed modems better and was overall faster due to it using larger more memory-resident BXE modules. Forem also managed to have that bridge net with Express Pro! which was really cool. I was a big fan of Forem for a while and I guess it's dead and buried because noone replied to my query about it recently.

I spent many hours on the phone with David (which I now regret) and I can honestly say that I simply can not understand what makes him tick. I think he must have a screw loose somewhere because his idea of reality is so warped and yet he's so sincere about it if you're gullible you might actually buy it for a while.

Coming back to csa8bit has been an interesting experience for me, and it's just sad to see Carina withering on the vine like this. I know Express Pro! isn't exactly healthy either, but I'd still consider it a viable BBS program which any 8-bit Sysop can still be proud to run (although I was never a big fan of the way its 64K Lowest Common Denominator overlay system vs. attempting a REAL machine language banked ram system) but Carina and Shadowsoft is now quite an embarassment for the 8-bit community.

PFFFFFFFFFFFFFFFFFFFFFFFF how dare you. 300 baud (!!) I'm connect on 19200
baud with my 600XL here. The XL is a very good computer, and I've heard
there are already connection speeds up to 57kbaud possible...

> finding a modem? Does it come with a terminal program? (Like I said I

You should look for an 850 interface, Black Box, Mio, P:R:, R:P: or other
modem interface. Then you can hook up a stock modem. the P:R: and 850 are
limited to 9600 baud... Black Box to 19200 and further I don't know.

Hmmm is it a stock 600XL? With 16kb of memory? You "should" upgrade to
64kb, then you can run FlickerTerm (best for 64kb), Icet or Term 80. If you
can upgrade to 256kb, you better run Ice-T (in my point of view). VERY good
terminal program.

> haven't seen it yet.) Any information would be greatly appreciated.

Succes. And don't fool around with atari XL computers <GRIN> they are the
BEST systems ever made.

Just in case noone has pointed this out, a shell over a modem is MUCH WORSE
than a tcp/ip connection. Consider this scenario: I have a one-megabyte
file to download. With tcp/ip, I can browse news, read my, mail, browse
the web, or whatever WHILE my download proceeds. With a shell account,
even with virtual term progs like screen, I cannot continue to use the shell
while I do, say Kermit transfers of files. Tcp/ip, OTOH, has a great many
sockets I may use concurrently.

Source record: 74150
Cross-posted to: comp.emulators.misc,comp.sys.atari.8bit

Hello All,

I am writing a new shell program for all the Atari 8bit emulators I can find (including the 2600 and the 5200) and need the following information:

1) The exact specification for the ATR disk format, including any and all enchancements to the 16-byte header

2) The exact specification for the 5200 rom images... it would seem that the 5200 is able to extract the game name and copyright from the cart itself. It is this (and any other info) I am seeking.

3) The exact specification for the huge ATR images found on Jellystone. I would like to know the exact layout for these 1mb atari disks, and how the loader program created by Yogi works.

4) The exact specification for the DCM compressed disk format. I already have a working routine but would like my work re-verfied.

Thanks in advance,
Will Fisher

BTW: If you are a major user of Atari Emulators and would like to beta test DIMS'97 then please e-mail me at blackat@direct.ca

Me too! I still have my slide-in speech synthesizer with TI Extended BASIC
cartridge. Having speech in my BASIC programs was the greatest thing in the
world at the time. (Still is, actually) :)

I recently undertook a (hilarious) project, and backed up all my
cassette-based TI programs on CD as wave files! hehe so I load them up in a
sound editor, and play them into the TI to load the program. Now I don't have
to worry about losing those programs to degrading tape! hehe

You are not going to get very far with the 600XL. Sorry but it only has
16k of memory and you will need more..there are upgrades avaiable for it
so search them out..Modem with an interface can go 9600, 14.4, or 19.2
Hayes to Hayes..

Good Luck.

The 65816 can handle it. On the IIgs this is called GNO/ME (Gno's Not ORCA / Multitasking (Multiuser?) Environment). There is even a new TCP/IP suite being built for it as we speak. It also happens to be the best overall shell environment on the Apple II, as far as I know.

I find the opposite to be true. I have a decent TCP setup and used it
for a few months but then went back to an 80-column VT100 terminal
(emulated :) and discovered screen, which is just about all I use now. True,
I can't download and do something else at the unix end, but it has two
enormous advantages that SLIP does not:

1) Flipping screens is done with a keystroke -- no annoying
reaching for a mouse to change windows. Also, instead of
a small window on the monitor I have the entire monitor.

2) When I get disconnected I do not lose my work. Just boot back
up and start up screen again. I can leave call waiting
enabled, and modem hangups are no big deal.

As to downloading files, at 28.8k a typical C-64 file takes about 5-10
seconds to download; typical Amiga files take a few minutes. Not
exactly a large window for reading news or accomplishing any serious
work!

Again, I used SLIP for a while, but now use screen pretty exclusively,
as I find it much more useful and coducive to getting work done (f.ex. one
window contains source code, others contain some running code, another
is for doing utility work, etc., I can work purely from the keyboard, and it's
all there when I log back on the next time, just where I left it). And
it's simply faster, since there's no packet headers being pushed around.A

YMMV!

Hmmm... has anybody done a high-quality internal 256K upgrade for the
600XL??? I'd be willing to shell out significantly more than it would
be worth for one.

I know there was a PBI-based one (the Yorky, I think it was called)
and I know Ben Poehland and somebody else both did one about the same
time. According to Ben, the route he and the other guy both took
tended to overheat the RAM chips in the upgrade. Ben's description of
how tortuous it was to do persuaded me not to try it myself.

Hello,

I've been away from the emulator scene for awhile and have recently started again. I have a few questions and hope some can help me.

How good is the registered version of Rainbow? Does the sound emulate well? Will it run well on a P90 w/ 16mb RAM in medium or full screen mode?

I am leaning towards purchasing the full version of Rainbow. If anyone feels that XLIT or any other emulator is better, please email me and tell me why.

Thanks.
David

Oh yeah, by the way, if you poke around on the net you'll find instructions for upgrading the 600XL to 64K internally. This is a butt-simple upgrade---you replace two chips and solder two wires--- and if you want to do anything at all with the machine it's a must.

Actually, Rainbow was originally designed for the Macintosh. It was ported to the PC later.

I bet their thinking of the Atari 7800 version and not the 2600 version. Considering they don't mention the 7800 version, which we all know does exist. If you believe every thing you read in Magazines. I have a bridge for sale, cheap....
Also the only reference to Atari 2600 on the Web page was in the last paragraph, not the first.

Ben Poehland attacked this problem in depth. There are good
instructions in a back issue of Atari Classics (December '93 I think)
for his Super Video upgrades for the XL and XE machines. Get this
issue, do the upgrade, and calibrate the color on your machine (Jeff
Potter has an article in that same issue on how to do this) and you
will be amazed!

I've just uploaded the latest version of the Atari800 Emulator to my
web site:-

http://www.signus.demon.co.uk/david/index.html

The emulator comes as source code for all versions or as an MS-DOS
binary. Sorry but I haven't got round to producing a new Amiga binary
yet!

Changes in 0.7.0
---

o F1 enters Menu System at any time. ESC returns you to the previous
screen. Items are lcoated using the cursor keys and selected by
either RETURN, SPACE, TAB or BACKSPACE. In most cases these keys
can be used interchangeably, the exception is in the Disk Management
Screen where RETURN is used to select a new disk and SPACE, TAB and
BACKSPACE are used to eject a disk - If there is no disk in the
virtual drive then SPACE, TAB and BACKSPACE will switch the drive
off (Useful for Shamus).

o X11, SVGALIB & DOS - F5 is now Warmstart and Shift F5 is Coldstart.

o X11 - F8 Single Shot Screen Dump, Shift F8 continuous Screen Dumps.

o MS-DOS version runs about three times quicker now that the emulator is
synchronising with a high resolution timer.

o MS-DOS version resets the screen back to text mode when finished.

wrote:

>So I connect, and it says I connected at 16.8, which is pretty pitiful as
>it is. 28.8 carrier connects should be possible if you had a Black Box.

28.8 CARRIER connects are possible BB or no, it's just that there is
no point in having your modem do data faster than your puter can.
While most Atari8 serial interfaces have a 9600bps limit, even the BB
is limited to 19.2Kbps (still far short of 28.8Kbps or heaven forbid,
28.8 carrier with further throughput through compression).

>Port speed can still be at 19.2k as it's the rate between the computer and
>the port, not the modem to modem speed.

Right! But you should never have your DCE to DCE speed exceed your
DTE to DCE speed. Never, unless you like errors and strange behavior.
With a BB, one should use CTS/RTS flow control, and force the modem to
operate at a maximum of 19.2 PERIOD (this means disable compression).
One should of course still use error correction mode. Now if you have
a 14.4, you might want to enable compression but that can make rates
go higher than 19.2 more than ya think, which is probably ok with
CTS/RTS flow.

If using some other serial interface, I would use software flow
control, disable data compression on the modem, force the modem to a
max speed of 9600bps, and experiment with error correction. Does
error correction require the use of CTS/RTS flow or not?

By the way, data compression appeared 1st in 2400bps modems (I think).

Cheers,

Jon

With the proper interface, a 600XL can use a high-speed modem, same as any other 8-bit. The challenge is to find a terminal program that runs in 16K. Or you can expand it to 64K, then it's like a compact 800XL without the video output.

> Brent

..I agree, the red bat-handled Wico stick is indestructible... I have two; one I bought in about 1981 and the other I found brand new at the flea market about 2 years ago <took it out of the box, tested it, boxed it back up..>

I doubt you can get Wico parts anymore, but you should be able to get Atari cables from B&C computervisions <their addr. is posted somewhere on this SIG, I'm sure...> which will work just fine.. Don't lose the rubber grommet on the Wico stick when changing cables!

BTW, while you have it taken apart, you can also connect the two fire button in parallel so that you can use either one at any time instead of having to select with the switch..

Hi Klaus,

The mighty great "Koronis Rift"??? You sound a tad sarcastic there... and yes, XL-it! is the first emulator (on my computer) that has been able to run the Lucasfilm Games software w/out any serious glitches (and I may add with sound).

Will

> crop up..I do not think they ever upgraded their product.

I did have some trouble with my ProBurner on an 800XL, where burned
EPROMs don't work when placed in the cartridge but verify ok on the
ProBurner. I figure it's a programming voltage/current issue, and
did find another 800XL that works just fine. Good thing I have a few
to play with.

Well since the auction is over, I guess it's not too relevant, but
I do want to mention that the ProBurner does work on (one of) my 800XL.

now some of the CBM PET computers could be fried with a POKE command to one of the hardware registers... seems that it would cause the video chip to try to run much faster than it could handle... or something like that... anybody remember details on this?

3248. FS: Atari Computer Goods! Some Shown! FREE Catalogs!

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-04 00:00:00 UTC
From: bensmith@linda.teleport.com
Message-ID: <5i2h11arq1@linda.teleport.com>
Source record: 74085
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. Everything mentioned on this list is on this list because I have multiples of these Items and I thought I'd list them for you. Especially if you wanted to buy More than one. So check it out!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, Spectre GCR Macintosh Emulators, MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I

will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

> than it could handle... or something like that... anybody remember details on this?

I remember this only because some yutz sent in a type-in program to COMPUTE! back in the days when they accepted suc things that did the special poke command if you won the game... said some stupid message like "You will never beat me... blah blah blah yadda yadda yadda".

COMPUTE! ran this huge apology in the next issue for all those people who's PET's were fried, and as a warning for all those who hadn't yet enterd the program. If the poke command was removed the game ended normally, if left in you had no more PET.

I don't know if COMPUTE! was ever held liable or not, somehow I doubt it tho since their were tons of legal stuff in the beginning of the type-in sections about liability... and the type-ins didn't stop after that either...

Anyways, I am rambling cause it's 3am and i am tired!!!

G'night all!

3250. Xe Gatearray PCB Q

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-04 00:00:00 UTC
From: schallt@worms.fh-rpl.de
Message-ID: <5i2npacrg1@widukind.fh-worms.de>
Source record: 74087

Hallo,

I am looking for manual`s and pcb`s for the XL and the XE.
Does someone know a source where i can download them?

Where is a pinout for Atari 8 Bit chip (like Pokey, Antic, CPU, GTIA, PIA,
MMU, Freddy) and layout`s?

I am also looking for the layout of the XE Gatearray that is needed to use
the ramdisk in 800- or 65XE`s. I want to make a little pcb and use nand and nor
ic`s to replace the gate array chip in the XE`s.

IF someone has some documentations, service manual for XE,XF,XL... please E-Mail
me.

I need also a source for happy utility prog.
" developer`s rules guide from Atari for:

800
XL
XE ?
ST

Thanks

King kong

I've never heard of "bit rot" either, but the only way to achieve it
would be to remove the sticker from the top of the EPROM and expose it
to lots of ultraviolet light. Which won't happen if you keep the chop
locked up in the cartridge. By the way, that's also a good indication
of whether it's an EPROM or a ROM -- if there's no sticker, it's a ROM.

Hello David! I have found that while some emulators are better than other over all, it is wisest to use more than just onc "be all end all" emulator. For example, I think XL-it is one of the better emulators but it can't format disk images, while XF36 can format and also XF36 runs very quickly (but less compatible). I have only used the demo of Rainbow. Of the limited bit I get to see with it I like. Etc.

Cheers,

Jon

Eh? Is this the same Next Generation that once published a "history of Atari" story that was chock-ridden with errors and innacuracies? Unless someone has actually seen the cart, I wouldn't believe it exists. They probably meant 7800 but screwed up. Here's a tidbit - Lucasfilm was commissioned to write Ballblazer as a game which specifically took advantage of the Atari 7800's (then) advanced graphics and animation capabilities.

Yes, if you think one of my ratings is out of line, let me know! However, I
won't change a rating because an item can be found at B&C. They specialize in
Atari 8-bits and do have a lot of hard to find items.

Heck, they still advertise XE Demo carts (4 games on 1 cart) for $5 or $10.
I don't know if they still have them or not. Still, I'd wager less than 3%
of the readers of this newsgroup have 1, and even less found one from a
source different than B&C, Best of Video 61. So I feel it still rates as an
ER. But if I were to get feedback to contradict this, I'd have no problem
changing it.

Also, rarity listings should not equate to price guides. Caveat emptor!

> Atari computer products and software were definitely not evenly
>distributed in the US. Some carts that were common in our area were
>rare in other parts of the country! It would be impossible to know how
>many of each were actually produced.

Exactly! B&C is in the heart of Atari country and they specialize! Try your
local used computer store and see how much Atari software they have.

Still, I'd be willing to compile survey results if collectors want to send
me a list of what they have. I could roll those results into the ratings.
Just download the list from http://www.execpc.com/VidGames.htm and fill in
how many of each cart you have (or have seen in local thrifts) in the C
column. Also include what area of the country you are in.

Yeah, and the Namco Museum discs run classic games on a "Jamma emulator".

NG has gotten to the point where they have the least accurate reporting of
any of the major online and/or print gaming mags. I'm shocked that nobody
has a web site dedicated to tracking their screwups yet.

You'd swear they have no editors.

Megaram III of Klaus Peters (Germany) should work - It is a little board sitting on one of the RAM-Chips and doesn't matter if they are 64x1 or 64x4 (was originally designed to work with XEGS). But I dont know, if it will fit mechanically, cause the RAM are sitting just under the keyboard. Then there are some others out - the Claus Buchholz extision should work with 600 XL too (must have 256x4 then). And there is a ABBUC -extension (don't know who designed it) replacing one LS157/158 and the RAM-chips

Actually that's not necessarily true; they make OTPROMs
(One-Time-Programmable ROMs) which are essentially regular EPROMs but
without the erase window. I have seen these used by Midway in their
arcade games and they *might* have been used for some game cartridges,
too. However, if it does have a window, it is an EPROM (at least
partly; them make CPU/EPROM combo chips and stuff like that, too).

Try to get the German "ATARI-Profibuch", this includes pinouts of all
chips (except Freddy) and the scematics of the 800 XL. Second way is the
wonderful "ABBUC Bauplanservice" - They have (mostly) all ATARI-service
manuals and service-manuals from SAMS-computerfacts to copy (for members
- I think).
> I am also looking for the layout of the XE Gatearray that is needed to use

I ve heard that ABBUC owns the right of all Klaus Peters products now
(not sure) the GAL used with Megaram III must be very similar to the
custom Atari-MMU2.

Hope this helps

In an article dated 3 Apr 1997 05:46:32 GMT, someone named Will Fisher
says...
>
>Hello all,
>
> I am hard at work writing DIMS'97 and want to be able to include
support
>for the large disk images found at Yogi's site. If anyone has the
>file-format for these files could they possible e-mail them to me at
>blackat@direct.ca
>
> I am also looking for the exact, up to date specification
(including any
>and all patches) for the ATR file format itself (the first 16 bytes).
>
Look at Umich for the latest SIO2PC - that's where the specs come from.
I'll try to dig and find it for you.

In an article dated 31 Mar 1997 14:56:31 GMT, someone named Schoenmaker
says...
>
>Can anyone out there tell me if it's possible (if yes, please scheme it) to
>connect an Atari 800XE to a PC monochome monitor (9-pin connector, just
>like an atari joystick)?
>
>Thnx in advance
>
>Marc Schoenmaker (mschoenm@worldonline.nl)
>
Atari Classics 2/6 ( I think it was) had info on getting TTL output; it's a
fairly simple add-on circuit as I recall.

Message-ID: <linleyE84rFI.1qo@netcom.com>
Source record: 74101
Cross-posted to: rec.games.video.classic,comp.sys.atari.8bit

In ye olden post woodcock@bnr.ca (Gregg Woodcock) spake...
>Trevin Beattie (*trevin*@*xmission*.*com*) wrote:
>: I've never heard of "bit rot" either, but the only way to achieve it
>: would be to remove the sticker from the top of the EPROM and expose it
>: to lots of ultraviolet light. Which won't happen if you keep the chop
>: locked up in the cartridge. By the way, that's also a good indication
>: of whether it's an EPROM or a ROM -- if there's no sticker, it's a ROM.
>
>Actually that's not necessarily true; they make OTPROMs
>(One-Time-Programmable ROMs) which are essentially regular EPROMs but

Further, EPROMS *do* eventually lose their programming. The 2716/2732/2764
Intel spec sheets I've seen claim that an EPROM will only hold it's
programming for 13-15 years. This could become a problem for EPROM based
classic carts. Granted, the spec sheets are probably a worst case prediction,
and in fact, these EPROMs may well go 20 or more years. Someday, though,
they will die.

Don't Fear's Huge Second Auction (Update 13)

Part 2: Everything Else

Alright kids here we go!

Notice there are a few new items!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

> James

I have a xerox copy of the 850 manual packed away at my parent's house.
I think that is all that came with it. Since reading these letters,
I have decided to pull it back out of the closet! When I find it,
I will find a way to get it to you if you would like.

I am also looking for a DOS to fully support my XF551 drive. The only copy
I had was somehow ruined before I got to set it up!

How did I get all those "I"'s in a row? Not intentional...

Also I need info on building a memory expansion for an XE Game System.
And more Atari 8 bit sites of hardware information.

Any help would be great!

John

3269. Docs for Archiver software?

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-04 00:00:00 UTC
From: ziggy29@netgate.net
Message-ID: <ziggy29-ya02408000R0404971942130001@nntp.netgate.net>
Source record: 74106

I've recently obtained an 810 with the Archiver chip and the
Archiver software (v1.2), but I have no clue about how to use it. The
disk boots up, I get a list of options and all...but I have no idea what
to do. I press "C" to copy, but I instantly get read errors every time,
no matter what. There must be something I don't know about using this.

Any pointers? If I have Disk X, how do I copy disk X? Just a
plain old "put the source in drive D1 and hit C" doesn't work no matter
what disk I use.

> Also, rarity listings should not equate to price guides. Caveat emptor!
>

Yes, that is definitely true! Price is usually based on supply and demand. You sometimes find very rare carts at bargain box prices in thrift shops, yard sales, flea markets, etc. Since, there is very little demand for Atari 8-bit computer items at these places, prices are often dirt cheap!

You continue to do a great job on your cart list. In the NorthEast US, the Atari computer & software distribution was much different than in other places in the US. When I get some free time, I will get together with a few friends and type up a list of rarity ratings in our area, and forward it to you.

Take care, Jon

3273. Don't Fear's 2nd Auction (Update 12) Part 2

```
Don't Fear's Huge Second Auction (Update 12)

Part 2: Everything Else

Alright kids here we go!

Notice there are a few new items!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

Don't Fear's Huge Second Auction (Update 12)

Part 1: 2600/5200/7800

Alright kids here we go!

Notice there are a few new items!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

If you're looking to sell your used computer hardware and software,
there's a new web page that has been set up for you to freely advertise
your equipment. As the site gets bigger, it will be another good source
besides usenet to check for good deals on these components. I hope this is
of great value to people.
If you've read this post before, and were disappointed by the selection,
please check back on occasion, as I'm just now starting to get responses to
this and people are beginning to post systems and software to be sold.

The URL for this page is: http://www.pacificone.com/trader

There is no cost to advertise here.

Sean Noble

While for many users of shell accounts your point holds true. I have
a shell available to me with my PPP account. It is UNIX based and as
far as I know the shell does only one thing at a time like you say.
But get this, I used to use a shell account at one of the local
universities in town which this particular login ran on VAX VMS. I
remember playing a little with spawining processes and what not and
being able to do more than one thing at once through the shell. I was
just getting into that though when I switched providers.

Cheers,

Jon

Actually a DOS is an OS, but I don't want to fight that war this week
or in this newsgroup. :) It is at least part of the OS anyway heh?
But on to more interesting discourse...

>it seems OS-9 is like a stripped down unix. It's preemtive multitasking
>and it handles the banked and segmented memory of expanded CoCo's very
>well. Some CoCo's have as much as 512K in them and I believe you can just

>64K limits.

That does indeed sound very nice. One it seems can never have enough
or at least too much RAM (although I wonder right now at 64MB on my
P5). If it has those cool features, and many of the file system
features of UNIX, then it blows all else away for an 8-bit.

>SDX was really just a clone of MS-DOS's COMMAND.COM.

Yep. I bought SDX when it was new and hot. I thought it was one of
the best things I ever bought for my Atari.

>and although it's
>cool and all, it doesn't really add that much functionality to the
>operating system.

Hmm. Well let's see... it offers a command line, batch processing,
subdirectories, time/date stamping, input/output redirection, volumes
up to 16MB, more efficient FMS (sector maps etc vs. sector chains),
support for double sided and other drive configurations and more. To
me, that is adding a tremendous ammount of functionality to what a
plain-jane Atari or Atari style DOS offers.

>Neither does Diamond GOS, which was more specifically
>aimed to do so.

I have about zip knowledge on that one, except I think I played with a
demo of it or soemthing once a LONG LONG time ago (way before SDX).

>Basic XE as the closest the 8-bit ever came to really using expanded
>memory productively by being able to run programs larger than 64K. And

>SNAPSHOT was the closest we came to a real OS advancement (task
>switching).

Kind of like DOSSHELL on the PC huh? Did that have something to do with "fork" or something... memory is fuzzy. I used to mess with so much wacky stuff on my Atari.

By the way, Action was one of my all time favorite Atari products.

Cheers,

Jon

Hmmm sounds VERY interesting!! With the registerd (enhanced) version of
APE, you should be able to get this MODEM speed either. There is even a
talking about 57k6 ... but I don't know this high speed is already done in
the newest ape.

Can't imagine the normale SIO port is able to get this high speed (using
the HardWare flow control of the PC i guess).

Perhaps the connection between ATARI and PC is "only" 19200 and the
connection between PC and MODEM might be this high speed... don't know.

> I tried to convince him to release that (R:P: device) and he never got
the

Don't know... the software he uses btw for his bbs... which programm is
that. It isn't bbs PRO! but I like to know which software he uses.

> programs either hang, or i get an error (136). Any suggestions?

You better "save" the .COM file in an .ATR - image. Get the programm
ATRIMG11.EXE to do that. Then bootup dos 2.5 and be sure you have the NEW
.ATR as D1: or as D2. Then you should be able to run the .COM file
properly.

The H: device is NICE, nut not good enough to run .COM files from. Perhaps
you can try to copy the .COM from direct from the H: device to your .ATR
image. Didn't try that yet.

Give it a try. And btw, XLit runs even BETTER on MSDOS. forget about
windows 95.

I have them somewhere I think. In fact, I have 4 Lucasfilm games that
were released by Epyx. I don't think Lucasfilm ever intended to
release them themselves as back then they had no distribution
infrastructure in place. That's why they used Epyx. Just a guess on
my part. Anyway, don't forget "The Eidolon" and "Koronis Rift."

I should even have the docs still for these somewhere.... (I know I
threw the boxes away but I think I have all/a lot of my game manuals
together in once box).

Cheers,

Jon

You MUST have the Diskette in the drive when you turn on
the Disk Drive power. This is what activates the Archiver Chip. Now turn
on your computer and Boot.

-program which self-boots the drive to activate the archiver chip. I
-think that this is the problem you have at the moment, you are
running
-the correct software but the drive's archiver chip is not being
-activated.

No, this shouldnt be true. There is a version of the ARCHIVER software
for the Happy drives, but not the reverse.
You can tell if your archiver is activated by this simple test: If it
is actiive, when you turn the drive on, it will not run for more than
a second or two. (Also after accessing disks).
If it is not active, the archiver needs to be "opened" by either
putting the archiver/editor disk in the drive and turning the drive on
(not the computer). OR by typing "O" from the A/E menu and typing the
code # for your archiver. (HA HA like you actually have that, right?)
If its a "pirated" archiver its probably 0000 or 9999 but other than
that it can be anywhere between those numbers.
Its more likely that you have some bit rot, as I dont think if the
chip is not active you would even get "READ ERROR".

Anyway, don't forget "The Eidolon" and "Koronis Rift."

I don't think the release versions of these games have a loading intro (I know for a fact The Eidolon doesn't becasue I actually bought it years ago). My copy of Kroronis Rift displays the Lucasfilm thing in the beginning, then it loads a still screen with the words Koronis Rift over a background of the vehicle on the rift shooting enemy saucers, and then when it fiinishes loading it plays the theme song in the cockpit of the vehicle. But the Eidolon was even worse, it didn't even have a title screen, it did the Lucasfilm thing in the beginning and after the 'ding' the Lucasfilm logo stayed on the screen until the game finished loading at which point you see the cockpit of your ship and the words 'The Eidolon' in cheesy Gr. 2 characters whree the viewport is.
I haven't seen the Rescue from Fractalus loader but i've seen the ballblazer one (don't have it, unfrotuatnely) and it's pretty impressive, I think it also had some music or sound effects playing too.

Here's a description:

Ozzy's Orchard - by TG software

In this game you go around trying to maintain your orchard while
avoiding the nasties going around trying to destroy it.

Each level has a certain type of crop. Each of these levels has 4
phases: Winter, Spring, Summer, and Fall.

(Since it has been a while since I've last played this game, I may not
be too accurate on the following, so if there are technicalities or
anything missing (And there will be ;-)), feel free to post
corrections.)

In winter or spring (I don't remember) you go around trying to plant
and maintain your orchard.

In summer you go around harvesting stuff.

In at least one of the seasons you can shoot the baddies.

That's all I really remember off the top of my head... anyone else
want to add/correct?

Never mind. The person who sold it to me just e-mailed the correct
code to me. It works now.

Thanks to all who responded.

3297. Atari8 trading post....

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-05 00:00:00 UTC
From: rfunk@peri.acs.ohio-state.edu
Message-ID: <199704060026.TAA01271@marvin.uts.ohio-state.edu>
Source record: 74041

I'd like to work with somebody to set up an Atari 8-bit "trading post"
web page, where people can post Atari8-related wanted and for-sale
ads.

It seems that many people have these things and want to sell them, so
they search the web for Atari, and email whoever has set up an Atari8
web page. I'm sure I'm not the only one who often gets these
messages. I'm not exactly in a position to do much with the notices I
get.

If I had a commercial ISP, it would be a simple matter for me to set
up some CGI so that people could fill in a form telling what they
have to sell (or want to buy), which would then be posted on a page
for all to see. Unfortunately, all my network connections are through
the Ohio State University, and it is against Ohio law to use them for
commercial purposes.

So, if somebody what can host this sort of page (including CGI
capability) would like to work with me on it, please let me know.
Or if you prefer, you could do it all on your own -- just let me know
so I can add a link!

Indeed, the disk I had was C64 on one side, Atari on the other. What was
once a cool economical idea taking advantage of the two-sided nature of
5.25 disks soon became my only hope of finding software at the store.

>By the way, does anyone have the US Epyx release of the games with the COOL
>intros during load time? (i.e. a Rotofoil going by, opening up and someone
>waving from within it and a huge spaceship with a small shuttle coming out)

I used to have it. It's gona along with the rest of my 8-bit software.
Too bad, because the huge-spaceship intro ROCKED. I remember downloading
a version of it in stand-alone form that WORKED, but that was about eight
years ago. A similar file cropped up on an ATR file in some archive about
a year ago, but it DIDN'T work. It's the old dangerous trend of more and
more files not working when you download them. The cracked Rescue on
Fractalus does not have the cool intro.

> the other systems.

I was always under the impression that "Ball Blazer" and "Rescue on Fractalus" (original title "Behind Jaggi Lines") were written for the Atari 8-bit computers, but were not released because hackers entered the Lucasfilm Games mainframe with the source and downloaded it. Copies of the games then appeared everywhere and Lucasfilm didn't release it themselves. Some time later, Epyx was interested in the games and wanted to release them, if Lucasfilm could provide C64 versions. These were made and both home computer versions got released. All that was gathered from a games magazine at that time.

By the way, does anyone have the US Epyx release of the games with the COOL intros during load time? (i.e. a Rotofoil going by, opening up and someone waving from within it and a huge spaceship with a small shuttle coming out)

I still have both European releases (from Activision) for the 8-bit lying around, but I borrowed the Ball Blazer disk to someone more than 10 years ago and never got it back. :(((

I've got a 1200xl, 1050 drive, P:R: Connections and Avatex 1200 modem for sale. 75 bucks for it all.

3305. FS/T: Atari 8-bit computer items [04/05/97]

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-05 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <5i53s0$4rr@sjx-ixn10.ix.netcom.com>
Source record: 74115

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 04/04/97

NOTE: There are currently 1546 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 4.00 Atariwriter
$ 4.00 Basic -- for use with the Atari 400 and 800
$ 5.00 Centipede
$ 9.00 Delta Drawing (Spinnaker)
$ 8.00 Frogger [Parker Brothers]
$ 2.50 Missile Command
$ 2.50 Space Invaders
$ 4.00 Star Raiders

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).

$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex connector cable.

$30.00

*****

LOT #2

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex connector cable.

This item has not been tested.

$ 5.00

*****

LOT #3

ATARI 820 PRINTER, with one (1) roll of paper and built-in power cord.

This item has not been tested.

$10.00

*****

LOT #4

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$12.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for
something that isn't listed, please don't ask (because if I
had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
considered (especially if the trade offer overwhelms me). I
collect for over 50 different systems, so please feel free
to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't
serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly
listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. I have been in
business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted (also, please check out my want lists,
since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

To reserve any item(s) listed here, please do the following:

1) carefully read the SALES CONDITIONS section first,
2) send me a list of the items that you are interested in,
3) include your full postal mailing address (this information is
for internal VGA use only)!
4) I will reply with a shipping information message for your order.

Thank you!

Ballblaster and Behind Jaggi Lines were pre-release betas, weren't they?
Essentially Ballblazer and Rescue on Fractalus but with some cometic and
gameplay differences... Nevertheless, the Atari 8-bit versions were so much
better than the C64 versions. Ballblazer had an ugly border (not fullscreen
overscan like the Atari) and was hella slow on the C64. Not nearly as creamy
smooth as the 8-bit version was. Oh, the new Playstation version sucks...
Doesn't have the gameplay and strategy of the original. Even the graphics are
uninspired (well, very impressive lightsourcing though).

Source record: 74119

The mortal Jon D. Melbo wrote:
: 28.8 CARRIER connects are possible BB or no, it's just that there is
: no point in having your modem do data faster than your puter can.

It simplifies modem configuration to let the modems connect at their native speeds.

: Right! But you should never have your DCE to DCE speed exceed your
: DTE to DCE speed. Never, unless you like errors and strange behavior.
: With a BB, one should use CTS/RTS flow control, and force the modem to
: operate at a maximum of 19.2 PERIOD (this means disable compression).

It doesn't really matter. CTS/RTS can throttle the I/O down as much as it needs to. The faster modem will wait for I/O without any complaints. Disabling compression isn't a good idea because it will disable it for ALL calls including 9600 or 14.4 users in which it could do some good even on an 8-bit BBS. Software flow control is pretty much dead in telecommunication, and has been dead as long as data compression has been standard since the stop and start commands take way too long to register that way.

: If using some other serial interface, I would use software flow
: control, disable data compression on the modem, force the modem to a
: max speed of 9600bps, and experiment with error correction. Does

This combination is deadly for most modern users unless they degrade their modem via reconfiguration. And if users have to do this, odds are they will stay away rather than futz with AT settings to get a reliable connect. That's why I think the MIO essentially died as a viable BBS interface when 14.4s became standard. They won't work well unless the "mythical" hardware flow control of the thing is enabled in some way.

: By the way, data compression appeared 1st in 2400bps modems (I think).

I know, but I don't think it caught on much until 9600.

That reminds me. Bob Puff was at one time going to release an SIO serial interface with hardware flow control on it and he said he might have been able to push the maximum data rate up to 38K or so.

I tried to convince him to release that (R:P: device) and he never got the courage up to commit to a run, although he had his BBS running on a prototype.

->====================

I have HAPPY software revision 5.2, which I am certain will run on
your 810 "archiver" . The disk also includes the Archiver/Editor
program which self-boots the drive to activate the archiver chip. I
think that this is the problem you have at the moment, you are running
the correct software but the drive's archiver chip is not being
activated. A great drive tho, I certainly would not be without it,
even now! Let me know if you would like it emailed, I might just post
it on my Home page too, for anyone else who might need it.
BTW, the HAPPY part of the software does not require the Archiver chip
to be opened.

Cool. Is there any possibility of it running on XL-it anytime?

> Ballblazer: Beaten droid 9! (Score the 1st goal, then ram the computer
into

Ha, ha! :)

BTW - did anyone notice that when you win a game in under one minute, it
says "DLV" (or so, for David Levine) on the very right border of the grid
when you're at the wall? I always thought that was a neat little touch.

Bye,
Thomas

BallBlaster was the original name of the game, before it was officially
released. It ran somehow slower than BallBlazer, if I remember correctly.

I think the game is normally in 2 player mode. You only need to change
settings to play against the droid.

Bye,
Thomas

I was hoping to go to Europe this Fall.......however, to get a cheap Air Fare (charter), I must fly back on or before October 26th. My question is, when is the ABBUC JHV? I was hoping to go. It would be a shame if I had to miss it because I would be in the area at the end of October.

Try reading the docs for Bobterm, it may cover that issue in there (I
don't remember).

Cheers,

Jon

Heck, selling Commodore *monitors* is fair game here, since I think quite a few of us use C= monitors with our Atari 8-bits. But I don't think many of us can use a C-64 or a Commodore disk drive.

Now if anyone has a good monitor cable to use with the 1902, I'd be interested. I found one at a junk electronics store for 50 cents, but it's frayed, with only two inputs remaining and the other two cut off and it seems a bit fragile and possibly dangerous.

I can vouch for the Commodore 1902; it works very well with my 800XL. Many other composite Commodore monitors do as well.

Not quite true... depends what you mean by identical. In the opening
tune there's an extra voice playing another bass part. Sounds a lot
cooler but it's harder to play on guitar. (If you're one of the nuts
like me who likes to recreate 8-bit game theme music on any available
instrument...) 8-) 8-)

It is cool. The earlier versions made a kind of simple "boop-boop" sound for disk access and keyboard "clicks". Hearing the real sounds coming out of my Mac is almost spooky. Doesn't really have any effect on the emulation per se, but definitely adds to the verisimilitude. It even has that little click you hear when you hit RESET.

Isn't it interesting that the three applications mentioned
(E-mail, Web-browsers, Newsreaders) work perfectly well in text-oriented
modes (consider pine and lynx). For that matter, a point and click
ftp-browser would be useful to get around the confusion many shell's have
about which ftp file is a binary and which is text, when dealing with
non-mainstream file formats. After that an html browser is a question of
which markup tags will be supported. Obviously a full frames and whistles
web browser would be pushing it, but many C-64 sites are already
lynx-friendly, and displaying pages set up for a text browser is not an
impossible task for an 8-bit!

Don't Fear's Huge Second Auction (Update 14)

Part 2: Everything Else

Alright kids here we go!

Notice there are a few new items!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

```
Don't Fear's Huge Second Auction (Update 14)

Part 1: 2600/5200/7800

Alright kids here we go!

Notice there are a few new items!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

> better than the C64 versions.

You say it. :)

> Oh, the new Playstation version sucks...
> Doesn't have the gameplay and strategy of the original. Even the
graphics are
> uninspired (well, very impressive lightsourcing though).

I bought it today. It's not too bad with split-screen against a human
player. But yes, the framerate is way too low and some of the changes to
the game itself aren't good ideas, either. :(

He just mentioned the games, since they were also made by Lucasfilm Games.

> I haven't seen the Rescue from Fractalus loader but i've seen the
> ballblazer one (don't have it, unfrotuatnely) and it's pretty
> impressive, I think it also had some music or sound effects playing
> too.

Yes, it had a stripped-down version of "Song of the Void" playing. I have
an old computer magazine with a screenshot from the loader (with the guy
waving his hand).

The "Rescue on Fractalus" loader intro had a *HUGE* space station scrolling
in from above and then a small ship coming out of it, flying down to the
bottom of the screen (only happens twice during the time it loads, I
think). The space station was animated in lots of places and looked
terrific.

Oh, and I always loved that sound in the Lucasfilm Games intro. *ping* :)
Kinda like the first THX trailer...

It would be great, if you could get them in Yogi's archive.

> Anyway, don't forget "The Eidolon" and "Koronis Rift."

How could I??? "The Eidolon" was also one of my favorite games back then. I
even got through once or twice. The ending was pretty cheesy. :)

> I should even have the docs still for these somewhere.... (I know I
> threw the boxes away but I think I have all/a lot of my game manuals

I would never throw away the boxes. Still have the European Ball Blazer and
Rescue on Fractalus ones (and others).

```
: Lucasfilm originally made a deal with Atari to write Ballblazer and
: Rescue on Fractalus on the 5200, not the 7800 or C64. People seem to
: forget that the SuperSystem release came way before those for
: the other systems.

Hmmm ... according to Ace magazine, Ballblazer was designed with
the new 7800 specifically in mind.

You're both wrong. Lucasfilm originally wrote both Ballblazer (Ballblaster) and Rescue on Fractalus (Behind Jaggi Lines) for the Atari 400/800 computers. I know - I was there, sort of. I worked for Epyx at the time, and we had copies in our grubby little hands well before the 5200 even existed. I still have the original copies somewhere in my archives (and no, they're not for sale, or for duplicating, either). At the time I was working there, BTW, Epyx did not have rights to the programs. That came shortly after I left. I don't remember who was distributing them before Epyx came into the picture.

Was the 7800 version better than the Atari 8-bit version? Can't imagine any
version being better than what I played on my 1200XL.

There's already something like this, but seems it's not being used as
much. The newsgroups are preferred.

AuctionWeb has some 8bit and ST systems for sale at times. One system I'd
seen recently, but I think it's already closed, had one for an 800 with
various memory configurations and additions, for around $30.

The URL? http://www.ebay.com/aw will get you right in.

: It seems that many people have these things and want to sell them, so
: they search the web for Atari, and email whoever has set up an Atari8
: web page. I'm sure I'm not the only one who often gets these
: messages. I'm not exactly in a position to do much with the notices I
: get.

The problem is that they have to deal with getting many messages, with the
bids and so on.

Just out of curiosity, were the load times of the games with the
intros slowed down noticeably, if at all? (I guess it would be sort
of hard to compare unless you compared one with the intro and one
without it and see how fast they loaded.)

>Oh, and I always loved that sound in the Lucasfilm Games intro. *ping* :)

Agreed. The lucasfilm logo looked pretty cool too.....

The Bobterm ARC file should include a handler for the SX212. It might be called RVERTER.COM or SX212.COM or something like that; you need to rename it to RS232.COM.

I've got BOTH the ballblazer and Fractalus in their forms WITH the loaders. Unfortunatly, BOTH my XL and by XE have fried. I do however have BallBlazer with the into in a .PRO format. APE (Shareware) was unable to duplicate the copy protection on Fractalus (Very strange, I remember the Happy software wouldn't copy it, and I had to use an Archiver Emulator to back it up)

Anyway, I'll up the Ballblazer.PRO file to ftp.hackerz.com NOW! (Well, in about 5 minutes when I find the file!)

Get 'em over the horizon.

Ballblazer: Beaten droid 9! (Score the 1st goal, then ram the computer into the corner for 2 minutes 55 second.....)

Yup. Graphics are a little sharper (less jaggy), and because every
7800 BB cart has a Pokey chip built-in, the sound and music are
identical. Ballblazer doesn't use the 7800's own sound hardware at
all.

```
XL-it! 0.20 is ready for downloading:

http://myst.slcc.edu/~markus

This version has been released because I was very excited by the
work that Alan Reeve did: he found out why Borderbund Titles didn't
work (please use Atari800-mode for Karateka).

Furthermore the color-artifacting support and the PC-joystick handling
have been improved.

Have fun,

Markus Gietzen

PS: Due to an important commercial project I can't work on XL-it!
as much as before but I don't drop it...

When I ran the Atari Scene on an 8bit (Express Pro) I used an MIO with a Hayes 14.4K, with everything set for compression and error correction on. It worked fine, most "delays" were due to the limitations of the program processing the data. Downloads typically maxed out around 950 to 1kbps, but uploads were much slower.

I have two MIOs, one is a very early model, the other is much later, since it was replaced after a lightning strike. Both handled 14.4K just fine.

I ended up going to a PC for telecommunications primarily for the 80 column ANSI color support, not speed.

Yep, quite a bit, actually... after the horribly disappointing MasterBlazer (?) for the ST's, I was wondering if the 8-bit version could ever be beat, and the 7800 did it. Perfect music (due to the chip being in the cart-- GREAT decision, Atari! Can you imagine BallBlazer with the 7800's sound chip wailing away like a cat in heat?), and the graphics are a LOT sharper. Gameplay's identical.

Has anyone noticed, a lot of the early 7800 games have gameplay IDENTICAL the the 8-bit Atari (5200/computer) versions? Like Joust, for example... better graphics, and the game plays EXACTLY the same. Makes me wonder how much they ported the source code over and just enhanced the graphics.. (Which is fine with me, since the games all played GREAT!) It's quite noticeable on Joust and Ballblazer.

While I'm at it-- WHY are the 7800 Donkey Kong games so hideous!? (DK, DK Jr, Mario Bros) The 7800 could have had the definitive versions of those games.. the Atari computer's versions of those games are almost perfect. I couldn't believe how BAD these are on the 7800... Horrible sound, graphics OK but not great, little attention paid to the arcade originals...

> But WHAT are the options and keys; for changing #of
> players and droids.. ??

You have to use one of the number keys. I forgot which one was which -- I think if you hit "1" you got to be player 2, and the computer player 1. And if you hit "0" the computer self played. I *think* the higher the number the higher the skill level, but it's been a long time since I played it. You'll have to experiment. It's a nuisance if you are using an XL/XE, because if you want to switch the player options, you must use SYSTEM RESET, which re-boots the computer on those series. But with the 400/800, when you do that, the game resets, and you can choose another option. Anyway, just have both joysticks handy and fool around; it's easy to figure out.

To this day Star Raiders is still a kick ass game, Atari should have included it with every 400 & 800 they ever sold and they should have had the guy who wrote it go right to work on a whole series of Star Raiders games.

> rename it to RS232.COM.
> --
> Bill Marcum bmarcum at iglou dot com
> "...and eleven long haired friends of Jesus in a chartreuse microbus..."

...there were several different handlers available for the SX212. The one that worked best for me was a modified R:Verter handler. My copy of BobTerm didn't automatically load a driver; I had to make a batch file that loaded the SXHAND.COM and then BOBTERM.COM files... but this may have been a very old version of BobTerm..

if I could ever get any of my Atari software onto my PC I could help this guy out, since I have about 6 different handlers, including 2 custom hacks I did to load at lower addresses in memory (since few if any of these handlers were relocatable!)

...ah well...

> I'd love to see the Epyx releases!!!

...little known fact: there were at least 2 or 3 (some say more)
different versions of "Ballblaster"... the version I had (still have
somewhere I guess) on my 800XL was fully functional as a 2-player game
only, although there was a credit listed in the title screen for
"Auto-Player by..." whoever... also the music lacked the "lead" voice
(it was rhythm tracks only).. I have also seen a version of Ballblaster
that lacked that credit and had kind of jerky animation. None of them
had a title screen of any kind. The "Epyx" releases mentioned in the
above text are actually the official LucasFilm releases of the games. To
my knowledge, Epyx never had anything to do with these games.

BTW, in some of these versions (and I believe in the official release of
BabbBlazer) you can find a signature in the back right square of the
playing field. It is the initials of one of the programmers credited in
my copy of BallBlaster, but not given a credit in the official game.
(Programmers will get their signature in there one way or another...
remember Atari 8-bit Super Breakout? See what happens if you press
Ctrl-Shift-I)

...and to put an end to any lingering traces of doubt in your minds
there NEVER was a 2600 BallBlazer!

(I would have known, it was just about my favorite game at the time)

I have one of these 810's, and if I remember correctly, you have to turn the disk drive OFF, insert the Archiver disk, and then turn the drive on. Instead of the long firing up process with quiet honks, it will light up and then immediately stop the drive. Start up the computer, and Archiver will work fine. I can't really remember the details (I was 6 or 7 when we got the thing) but I think the drive reads something off the disk that turns on the Archiver chip and allows the Archiver software to work. Hope this helps!

It always seemed to me like the 7800 version seemed to move a little
slower
but I haven't compared the two side to side. On the XE cartridge
version, if
you win the game in under 1 minute and move to the right side of the
screen it
looks like someone's initials. at the right edge of the board. Is this
on the
disk version? There is also an intro on the cartridge version which
sounds
like the one on the disk version

Well, BallBlaster is not of much interest anyway, since it was a pre-release version.

> BTW, in some of these versions (and I believe in the official release of
> BabbBlazer) you can find a signature in the back right square of the
> playing field.

This was visible only if you won a game in under one minute.

> It is the initials of one of the programmers credited in
> my copy of BallBlaster, but not given a credit in the official game.

He was also credited in the official version. His name is David Levine and he wrote and designed
the game together with Peter Langston. Both are also thanked in the PlayStation version.

> ...and to put an end to any lingering traces of doubt in your minds
> there NEVER was a 2600 BallBlazer!

I wouldn't even WANT to see it. :)

A VERY kind soul sent me an Epyx BallBlazer ATR with the intro intact, but as someone else here
already wrote, there's only a black screen with the music playing along when the game itself should
come up. :(

If anyone's interested... The European release from Activision only had the normal Activision intro
of that time (the logo spinning slowly and flying to the front of the screen).

Bye,
Thomas

Hello!

I am conducting an Atari Lynx auction! I did one earlier this year, and some of the people who have bid on items haven't answered me. I am therefore going to put up the remaining games for auction.

Please check my web page for the games and current bids(bids will be updated starting April 8, so don't pay attention to the bids on the page until after April 8.

Here is the URL:

http://msm.byu.edu/complab/emp/joshuam/lynx.htm

Please E-mail all bids to:

0jmorrel@msmlab.byu.edu

Thanks!!

-Josh Morrell

3374. Run BallBlazer with XL-it !

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-07 00:00:00 UTC
From: Thomas Meyer <i03a@zfn.uni-bremen.de>
Message-ID: <01bc438f$e97e8ae0$fe066686@mnemo.home.informatik.uni-bremen.de>
Source record: 74005

Okay, I've done a bit of debugging to see why BallBlazer only comes up as a black screen in XL-it!
The problem seems to be that DMACTL and GRACTL aren't properly initialized (you will see that the
registers aren't correctly set when you interrupt the game with F7 in XL-it).

Here's what you can do to make it work (required every time you run it):
1. Start BallBlazer in XL-it!
2. When you hear the music, press F7 to enter the debugger
3. Enter "a f00" (f, zero, zero) to begin assembling at $f00, then enter this:
lda #$3f
sta $d400
lda #3
sta $d01d
jmp $e462
<return>
4. Enter "a 4cbb", then enter:
jmp $f00
<return>
5. Enter "x" to exit the debugger.

If everything went well, you should now see the BallBlazer screen. At times it seems that this hack
doesn't work and the Display List Interrupt isn't executed. Colors will be wrong and the playfield
will look screwy. In that case just run XL-it again and try the above for a second time. THIS
WORKS. I tested this on a file version I got from Yogi's archive and the Epyx boot disk release.
This most certainly will NOT work with "BallBlaster" (which isn't black anyway).

On a side note: I got it wrong. The programmers really aren't credited in the game itself. Only
when you win in under a minute the letters "DL" and "PSL" will be displayed at the right (non-goal)
wall of the screen.

Bye,
Thomas

Hey Atari 8-bit lovers out there!

There is another new Atari Internet page out there. Please pay a visit to
get an European perspective of the 8-bit community.

Here's the address: http://www.meijer.demon.nl

See ya!

Fred Meijer

3378. ANY ATARI PIRATE BOARDS LEFT???

Newsgroup: comp.sys.atari.8bit

Ah, the good old days... when a few choice uploads indicated to the
local sysop that you were worthy of higher access, allowing you to
download the best warez available for the Atari!

3379. Re: Run BallBlazer with XL-it !

Newsgroup: comp.sys.atari.8bit

You have to go through all THAT to get it to work??
I just use the -nobasic and -oldmode options from the command line.
atari -nobasic -oldmode -file gamedisk.atr
Works all the time for me :-)

Keith

The Sx212 is a direct connect 1200 bd modem.. you don't need an interface
but you do need a special SX212.COM handler which should come with your
archived version of Bobterm. (Simply run SX212.COM BEFORE loading Bobterm
and it should run fine)

I was the guy that said ET may have been the first talking game on the 8bit. Well ET was released in 82. When did Tumble Bugs come out, and who made it? I never heard of that game before..

Was the speech really mechanical or just very distorted..

You need an SX212 device handler.

Dterm and AMODEM and a patch for Express are available for the
SX212 at umich (IIRC).

I have run the VSS version, but I don't think it's running very good on it... There's so trouble in
the graphics. Also, I have managed to run the 8-bit BallBlazer now!! See my other post.

Bye,
Thomas

I have not been following this group that closely so this might have addressed before. Has anyone had problems with Hardball on XLit? Everytime I start a new game, some players are out of position. And this includes the computer controlled team!

If anyone has seen this problem or know what the fix is, please let me know.

Thanks,
David

>I can vouch for the Commodore 1902; it works very well with my 800XL.
>Many other composite Commodore monitors do as well.

AGreed, i have my 130XE hooked up to a 1702 monitor, the only problem was that I couldn't find any cables for it (somebody mentioned Radio Shack a while--maybe years?--back, but they didn't have it) so i ended up making my own. Actually, I did have a cable but it was for a C64, with a weird 7-pin DIN connector, so I just lopped that end off and soldered some bits of paperclip to the wires, wrapped it up in electrical tape, and it works great, as long as I don't move it round too much.
Also, has anybody noticed that with the 1702 monitors (maybe otehr Commodore monitors too), the middle factory-detented positions for the colour, brightness, tint, and contrast are WAY off? I tried using these centre positions but the contrast was way too high, making the colours wash out to the point where you couldn't really discern shades of one colour with slightly different shades of a similar colour (very noticeable if you look at images that have those famous scrolling 256-colour bars).

: I was thinking of something a bit more focused in scope...

Something automated to some extent like AuctionWeb could do it. You still have to involve the human side, though.

: Sean Noble pointed me to his Computer Trading Zone at
: http://www.pacificone.com/trader/
: which looks promising. It's limited to Atari, Apple, and
: Commodore. I've added a link to it on my page.

I just took a look before replying. Promising, yes. The Atari side has nothing yet, except for one in the 8bit area. There's more in the Amiga and other spots. But of course, it'll flesh out in time.

However, he still has to make sure the old and sold stuff are deleted. That's the responsibility of the seller, or add on a deadline, when it will be deleted, uness the seller asks for an extension.

Did you get the BallBlazer version to work (or was it the Ballblaster version?), and on what emulator? I downloaded a BallBlazer version but the screen was blank (I could hear the game running in the background and the players flying across the screen after the ball).

I like Ballblaster but BallBlazer has a better interface and a few other changes.

3398. Wanted: 800XL PBI Info!

Newsgroup: comp.sys.atari.8bit

From: richczeta@aol.com
Message-ID: <19970408092801.FAA29954@ladder01.news.aol.com>
Source record: 73930

Does anyone know where to get documentation on building hardware for, and controlling, the 800XL PBI?

Thanks!

Richard

Hmmmm don't know... perhaps MOON PATROL? Very cool game (ehmmm the NEW version in the Cart... there is also an old version (1982)... Moon Patrol Aval... (??) or something like that... that is the old one. Watch out for the new version.

Marius

Nope, it only has the sound capabilities of a 2600. Several carts
include a POKEY for sound. This seems like an expensive solution
except Atari probably had a bazillion excess POKEYs. I would also
guess that the designers figured on d/a converters and big roms
getting cheap enough that later games could essentially have their own
custom wavetables on the cart...

Joust also has some subtle differences, such as eggs do not hatch into
already-mounted birds, but to dismounted knights whose birds eventually
find them. This is a bit important in the egg wave where it pretty much
counts as extra time. :)

It is understandable that much of the code in these games could have
been "ported", much in the same way that they could have been for
Atarisoft releases for the Commodore 64 and other 6502 platforms.

I have the NES versions of the DK games, and they are just as bad. It's not just a pre-crash/post-crash thing, it's just that the only good arcade port Nintendo ever did was Super Mario Bros. Mario Bros. is fun, but missing a lot of stuff, Punch OUt!, Super PO!, never really were truly converted, Popeye and DK 3 were not as popular, but ironically IMO the best ports from arcade to home on the NES.

Sorry to bother you again, but I am using XLit020. Is there a particular configuration? It's been so long since I used my 1200XL that I forgot basic syntax (you can't imagine how long it took me to figure out the syntax for loading and running a BASIC program on the Atari).

No more simple days of using a TRANSLATOR disk...

Thus Spake Justin Haley Martin (jhmartin@us.itd.umich.edu):
: I have the NES versions of the DK games, and they are just as bad. It's
: not just a pre-crash/post-crash thing, it's just that the only good arcade
: port Nintendo ever did was Super Mario Bros. Mario Bros. is fun, but
: missing a lot of stuff, Punch OUt!, Super PO!, never really were truly
: converted, Popeye and DK 3 were not as popular, but ironically IMO the
: best ports from arcade to home on the NES.

I hear that Gyruss is pretty good. ;^)

Really, though, I kind of like Joust. And Ms. Pac-man and Pacmania are
right playable. Oh, and KLAX and Tetris (by Tengen too) are pretty good.

I would guess for Tail of Beta Lyrae by Gilbertson and Price. It was
released by Datamost. Excellent sound and scramble like shooter.

Don't Fear's Huge Second Auction (Update 17)

Part 2: Everything Else

Alright kids here we go!

Notice there are a few new items!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

basic
> syntax (you can't imagine how long it took me to figure out the syntax
for
> loading and running a BASIC program on the Atari).

Just run the emulator like this:
atari -nobasic -modex ballblzr.atr (if you have the ATR)

To run the .EXE or .COM:
atari -nobasic -modex -hd . dos25.atr

Use "L" in DOS and enter the name of the executable. It has to reside in
the current directory where you started XL-it from. The same applies to the
DOS disk.

If BallBlazer comes up with a black screen, but the music is playing, try
the following. It's very awkward, but maybe Markus will have a solution in
his next release of XL-it. ;)

1. Start BallBlazer in XL-it!
2. When you hear the music, press F7 to enter the debugger
3. Enter "a f00" (f, zero, zero) to begin assembling at $f00, then enter
this:
lda #$3f
sta $d400
lda #3
sta $d01d
jmp $e462
<return>
4. Enter "a 4cbb", then enter:
jmp $f00
<return>
5. Enter "x" to exit the debugger.

If everything went well, you should now see the BallBlazer screen. At times
it seems that this hack doesn't work and the Display List Interrupt isn't
executed. Colors will be wrong and the playfield will look screwy. In that
case just run XL-it again and try the above for a second time.

Bye,
Thomas

What are you asking for it, as I am interested... Just to set the tone,
thought, I just bought 2 Atari Jaguars, Jaglink and 4 games for $20...
it may have sentimental value, but that rarely translates into $$$.

3414. Where can I get A.P.E. cheap???

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-08 00:00:00 UTC
From: Ulf.Petersen@KIEL.netsurf.de
Message-ID: <6USs$NI3nhB@ulf.kiel.netsurf.de>
Source record: 73946

Hi there!

Maybe you already know that you can find visit my web page at ...

http://members.aol.com/upetersen/atari.htm

in order to download some of my commercial games and programmes. What you probably don't know is that I have loads of software that I would like to add to it (Public Domain and more of my commercial programmes). The only problem is that I don't have a proper cable to connect my 1050 (upgraded with a disk speeder called SPEEDY) to my PC to transfer all programmes directly. Currently I have to convert all disks to double density on my ATARI 8Bit to transfer them which simply takes to much time (which I don't have!!!). I was told that A.P.E. is pretty good (can I actually use that cable to connect my 1050 directly?). The only problem seems to be the price. Therefore I'd like to ask someone to build such a cable at a low price for me. If you consider that all of you could get lots of "new" software I think that's a fair deal! So, if you can build such a cable, please contact me :)! The sooner the better :))).

CU!

Ulf

3415. Don't Fear's 2nd Auction (Update 17) Part 1

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-08 00:00:00 UTC

```
Don't Fear's Huge Second Auction (Update 17)

Part 1: 2600/5200/7800

Alright kids here we go!

Notice there are a few new items!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

The 7800 uses (to the best of my knowledge) the same chip for sound as the
Atari 2600.
In my opinion, this is the biggest downer for the 7800...crappy sound.

3417. XL-IT 0.20 bug? ("Power Down")

Newsgroup: comp.sys.atari.8bit

Thanks for the info.. Although I can't remember having any
of those titles. Hmmmm.. Well I had that game when I was in
Europe (1986 i guess) and it was in english so it should be
available here as well.. The thing I can remeber about it is
that there were 2 stages out of those (possibly 10) that were
very simple. You had to navigate your ship thru a tunnel made
of plain lines (and that stage had this strange sound)..
So that stage had no shooting, nothing at all.. just 2 lines
on upper and lower side making up a tunnel.. Anything coming
to mind now? :)

Waiting for any comments, thanks to everyone!!!!!

3426. Historical accuracy

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-09 00:00:00 UTC
From: Michael Current <mcurrent@carleton.edu>
Message-ID: <mcurrent-0904971046060001@mcmdc.library.carleton.edu>
Source record: 73875

I'm looking for some clarification on some points presently mentioned in the FAQ.

When exactly did the 400/800 first appear. It has long been my understanding that they first debuted at the Fall CES in 1978 in November, but didn't actually ship until 1979. Can anyone reliably confirm or refute this?

Who can describe or point me to the best source which describes just how the GTIA was an advancement over CTIA. I know the max number of simultaneous colors increased from 128 to 256, and that gr. 9-11 became available in BASIC. Is that it? Max resolution wasn't increased, was it? (gr.8, at 320x192)

When did machines first start shipping with GTIA installed? I now believe the 400/800 began shipping with the GTIA toward the second half of 1982, about the same time the 1200XL appeared (also with GTIA). Is this right? Does anyone know otherwise? Which came first, 400/800's with GTIA or the 1200XL?

I state in the FAQ that the 130XE has "a few new graphics capabilities", not available in any of the other XL/XE's. What was I talking about? Are there any, or was I making that up? (It was based on postings here, I'm sure.)

Thanks for the help,

Although the subject is starting to drift, I think I can reply to this. Yeah, it is hard on a 6502, but it has been done. Ever heard of LUnix or ACE? Both are unix-type preemptive multitaskers on C64/C128 and modified C= systems. They work on perfectly ordinary C64s, although not exceptionally. I know, I've used both, and I LIKE THEM. BTW, I am writing a preemptive, multitasking OS for the Commie, now. 6510 was too difficult to deal with the fixed SP, though, so I gave up on C64. Now I will only write for the 8502 based C128 with no SP limitations. My primary interest is to incorporate TCP/IP, or more correctly SL/IP. If any of you who've written a Commie OS would like to talk to me, please email (my PC I use for internet news is crapping out on me).

>
> Thanks
> Sean Unruh

...markus should be answering this, but he's a really busy guy...

..First of all, are you turning off BASIC? Very few ".COM" (actually binary loadable) files will work on an Atari (real or virtual) unless BASIC is off. There is an option in the user interface called Environment that will allow you to turn BASIC on & off, among other things. Or, if you've already booted your virtual Atari, hold down F1 (the Option key on the Atari) and press F10 (which reboots the Atari - or maybe it's F9.. one is the RESET key, the other is a real reboot)

As far as your ERROR - 136's go, occasionally you will get a bad binary, but most likely you are trying to run programs from one of Yogi's Mega-Image format .ATR disk images. These will not work properly under any Atari DOS. You need to get the MENU.ATR diskimage and make it drive D1:, and make the megaimage drive D2:, and boot with BASIC disabled (see above); you will see a menu of the games on the MegaImage... BTW I never could get Joust (from Games #1, I think) to work.

Hope this helps.

...You can easily make such a cable, using Radio Shack parts. I have
posted the pinouts on this NG (do a DejaNews search on "Monitor Jack" or
some such in this NG), or else look in the revised (NOT original)
version of Mapping the Atari (that's where I got the info)

I have built several of these cables to use with various Atari's and my
old CBM-1702 monitor, and they work well..

3434. BallBlazer Rumors and facts

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-09 00:00:00 UTC
From: Julian Eggebrecht <julian@factor5.com>
Message-ID: <01bc451b$7354c4a0$1a4db8ce@hal.factor5.com>
Source record: 73883

Hi everybody!

Just to clear up a few things about BallBlazer:

The game was part of a two game deal between Atari and Lucasfilm in 1982. At the time, Lucas searched for funding of a games research group. Atari was high on cash and gave Lucasfilm an enormous amount of cash. Than Rescue and BallBlazer were started, or should we say, BallBlaster and Behind Jaggi Lines. Both were to be developed as cartridge games for the Atari 8-bit computers and the 5200. BTW... Lucas had free reign about the content, so the guys at the games group played around for almost a year with technical tests. Out of these tests came the technical backgrounds for BB and RoF. RoF's concept for Fractals was in fact thought out by Loren Carpenter, then head of Lucasfilms Computer Graphics research division and responsible for the Genesis fractal sequence in Star Trek 2.
Then, both games were programmed and Atari - for the huge amount of cash - got regular updates on the development process. One of these updates - in fact Beta versions of both games - were given out to the pirate community by an Atari employee (the story about the hacker download is completely wrong).
Everybody was upset, and Atari urged Lucas to finish the 5200 modifications to release that version first. Sometime during that phase, Atari also gave Lucas an Atari 7800 prototype - the system was scheduled to be launched in 1984, and special versions of BallBlazer and Rescue were made (the changes were easy to do):
7800 BallBlazer runs in 30 frames instead of the Atari 8-Bit and 5200 versions, which run in 20 frames. The rotofoils and plasmorb are high (or should we say normal) res, due to the better sprite hardware of the 7800... and that's it.
Rescue also has better looking sprites for the jaggis, the shots and stations on the mountains.
The 5200 versions were published on cart mid 1984 - and then Atari's crash came, they were sold, the 7800 didn't come out and Lucasfilm Games was obviously pretty annoyed. At the end of 1984, Lucasfilm struck a deal with Epyx to save the computer versions. At the time, everybody in the games division was already working on Koronis Rift and Eidolon, but the guys still took the time for the disk releases and made those fantastic loading intros. The C64 versions were given to HESWare for conversion - Lucasfilm Games' programmers didn't want to touch the machine at the time.
The story ends in 1987, when the 7800 finally came out and Atari still had legal rights to publish BallBlazer. They did not have the rights for Fractalus, so it didn't come out.
In the LucasArts archives, there are still the following treasures left:
- Rescue on Fractalus for the 7800

- Labyrinth for the Atari 8-Bit (an unfinished Beta)
AND... if I can trust my source, there is a 2600 version of BallBlazer -
albeit a not very nice one.

As always, take this whole thing with a grain of salt, but most of it is true - as might be the fact, that classic BallBlazer is hidden in BallBlazer Champions on the PlayStation.

Cheers,

Julian

: Heck, selling Commodore *monitors* is fair game here, since I think
: quite a few of us use C= monitors with our Atari 8-bits. But I
: don't think many of us can use a C-64 or a Commodore disk drive.

I don't think it's thoroughly unreasonable to think that an 8-bit enthusiast wouldn't be interested in another 8-bit platform. I got my 800 last year precisely because I was going through a 64 revival and thought I had some catching up to do. That also lead to getting a IIc a few months later (although that one hasn't been as cool as I thought it would be.)

Anyway. Don't come down too hard on the guy.

It was CES in January of 1979, but I cannot confirm if this was the
"first" public showing. The first official small shipment of the
400/800 was on August 29th 1979. These were hand built pilot run units
to Sears that needed to be in stock by Sept. 1 so they could be placed
in the big fall catalog. The units were placed in the Sears warehouse
and then immediatly returned to Atari after the "in stock" requirment
had been meet.

The first "real" consumer units were shipped in Nov. of 79 and were
400's to Sears followed very shortly by 800's.

Extra graphic modes and 1 extra Luminance line, hence the doubling of
hues availible.

The very first proto systems did have the GTIA, but it had some
problems and was not released in the consumer version until 1981. The
GTIA was completed before the CTIA.

800's with GTIA's came a year before the 1200XL.

I'm sure there are player/missle bugs in the XLIT emulation. I've mailed
Markus about this, and send him a very very very tiny test programm to show
one of the bugs.

I guess he will fix this problem, in the next version or so...

I've seen many XL-emulators, but XL-it RULEZZZZZ!!

I'm trying to remember a game title. Someone has to remember
this one.

It was a side scrolling game made up of a modified character
set (no pixels). At the start of the game you had several men
in a city on the far left. An enemy ship comes by and picks
them up to drop them into a volcano to the right. You had to
save them by moving them all to another city to the right, past
the volcano. Then the volcano starts erupting and destroying
that city. You had to move the guys again further to the
right to avoid getting killed again. I think you had to
eventually get the people to safety on the far right.

Is that enough info to identify the game. And if you can, is
it available anywhere (like Yogi's).

There was a UK game (or two) that were sideays shooters from about 85/86.
Was it the one with reddish brown GR.9 type graphics? I can't remember the
name but that was a UK game and good fun if a little hard.

Well 2 Jags and 4 games for $20, I think you got a steal. I know some
stores that sell 286 systems complete with 640k ram and a BW monitor for
$15. so yeah, old machines may have sentimental value but they are only
worth what someone is willing to pay for them. I had an offer of $75 for
my entire system (which was more than the one you are responding too, and
I refused)

Back in '87 I had the opportunity to chat with Peter Langston, one of the members of the (then-named) LucasFilm game development group. He related a story similar to the one previously posted here. He also let me know about an easter egg in Atari 8-bit BallBlazer:

During the attract mode, type A U T H O R S . The development team members' names appear, along with descriptions of the work each did on the game.

Sorry if this is old news...man, those were great times...

Yeah, i can remember one or two from mastertronic, just after they
changed there cassette cases to the 'blue' style..

The one i am talking about is Panther, or at least i think thats its
name. It had a cool soundtrack, i dont know if it was in Yogi's or not
though. Just remeber stage 1 had a railway line running up the middle,
and you had to land next to 'huts' to rescue survivors.. and later having
to fly low over a city to dodge the radar, and a ocean stage with oil rigs...

Later,

Richy Boy

Also, neither the 6502, 6510, nor 8502 are responsible for stack and ZP
capabilities as you need them.

None of the three offer relocatable stacks or zero pages, however the MMU
inside the C128 does offer this. In fact I already made use of it's
relocatable zero page, to speed up the code in Modplay 128, a program I
just finished (it should be available NOW, from Arkanix Labs, email to
jonm@arkanixlabs.com).

I needed both Ml and BASIC to have plenty of zero page space, so inside
the ML portions of this program, ZP is relocated, to give the ML plenty of
workspace while keeping it from stepping on BASIC's pointers, etc.

> How can you build a custom megaimage from the game .exe's
> you already have.. so it works with the menu.atr by YOGI?
> How do you create .ATR filesizes bigger than 130kb ?

With APE or SIO2PC you can create such a large .ATR image. Then you should use a dos that is able to format in a high-capicity format. I prefer using SpartaDos, but there are people saying you SHOULD use mydos.... perhaps for games/demo's mydos is better, but with the very good functionating MicroSpartados (kind of gamemenu for spartados), from BEWEsoft... I prefer SpartaDos most.

After booting spartados from a "normal" .atr you must start the HDINIT programm from Fte (belongs to spartados). Load your BIG .ATR image on D3: or D4: and then you can format it. Copy the X3??.DOS file to your LARGE image and on the large image type then:

boot x3??.dos....

After that you have an auto-bootable partition with sparta....

Succes

Marius

p.s. most games/demo's won't run without the MicroSpartados from BEWE....

Actually, with the friendly but powerful text-mode programs like trn
and mush and eep (a .newsrc editor, I only use it to mass-unsubscribe from
tons of new groups that I have automatically added), I'm amazed nobody has made
a curses-based ftp program.

Similar to how ShrinkIt (Apple II 8 bit compression program) does a text-moe
standard file, and things like mush and pine do visual selection of items,
someone could basically write a front-end of ftp that acted like Standard File.
(I don't care enough to write one, as regular ftp is "good enough" and the rare
times I use a GUI ftp it's Fetch at work.. but I use regular ftp much more
often.)

In my opinion, the Atari 8-bit version of Mario Brothers isn't very
good. It's unbearably slow and there's a noticeable lag between when
you move the joystick and having Mario or Luigi change directions.
Completely unlike the regular 8-bit Donkey Kong which had very quick
response......

Hi Greg,

I have heard of OTPROMs but never seen part numbers compatible with
regular EPROMs (like the 27xx or 27xxx series). Would you know who
still manufactures these critters?

Take care, Jon

David,
There is a guy sorta local to me that has redone the Amiga version. His name is Willi Kusche. That file w/original source and other stuff is at the Umich Archive. There were many repairs made the it and it should work pretty well. I belive there is an A2000 compiled version included.

It's probably not worth the effort unless you already have one or more of
the following:
XF551 disk drive
Black Box with floppy board
Percom or ATR floppy controller

Otherwise, you're better off using the drive on an ST or selling it to
someone who has an ST. Or, if it's a double sided drive, and you have an
old PC without a 3.5, you might use it there.

I chalk that up to inertia.

Luigi & Mario have some given mass and it takes some force to accelerate
them from rest. I actually really liked this control--it may take some
getting used to, but it's great once you've mastered it.

My friend & I used to play this game tons in high school and we'd be
laughing our guts out all the way through it, what w/ the bajillion ways
to screw over your opponent.

>If the machine is locked up, hitting Reset SHOULD generate a cold start. Another easy way
to do it, is simply type BYE from Basic, then hit RESET for a cold start.

The kind of "hard" reset I'm talking about is done through hardware.
On the Intel boxes, the reset switch is phsically tied through to the
chip reset line on the CPU. Pressing the "RESET" button on our
beloved Atari 8-bits does not always give you a reset. Some lockups
are such that pressing reset cannot even get the machine to reboot, a
power cycle is then required.

Cheers,

Jon

I don't think it's available any more. I tried to order one a while
ago and was totally unable to contact anyone at the telephone number
listed in the Vendor list. Since then I've seen at least one post
here to the effect that it's no longer sold.

> Also, there is some kind of modification that firms up the keys on a
> 130XE...anyone have this one or know more information about it?

Yes. Best sells it, I can't remember what it's called. Might be
called TT-touch---which is what the ST version is called. I think
it's just a set of replacement springs, but it is cheap, like $10.

Not sure if I remember Way Out, but Capture the Flag (by whom, I don't
recall) was like that too. A plain old DOOM-esque maze w/ you and
your partner chasing each other (well, one chased the other and the
chasee tried to escape the maze before getting caught) but it ran
fast and looked nice and I got a real kick out of it.

Your "characters" were just vertical tubes of shimmering light--kind of
a neat effect.

Actually, a surprising number of people *do* put things in .gz and
.tar.gz format (Unix stuff) for other platforms. I think they probably
have all the source uploaded to a Unix box and then they compress it
with gzip.

In the Mac world, the expanded (shareware) version of Stuffit Expander--
the main Mac tool for decompressing and de-archiving--handles almost
every compression/archival format under the sun.

If a file is small enough to be used by an Atari 8-bit (i.e. not likely
over 100K), which even a 9600 modem (which I have strung up to my 850)
can download in 2 minutes or less, you may be better off taking a small
.gz file and, if you can find a Unix box or possibly even a DOS box,
gunzipping it and then uuencoding it for transfer to the Atari.

3481. 6502 Flag behaviour

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-10 00:00:00 UTC
From: Sasha Cimermanis <scim@erols.com>
Message-ID: <334D7E96.5F9C@erols.com>
Source record: 73836

Hello,

I am attempting to someone regarding a 6502 flag behaviour problem.
Here it is.

I have recently encountered a following piece of code:

```
lda $FE
ora #$08
bne <somewhere I don't want it to bne>
```

From all the sources on 6502 it appears that the Z flag will always be
reset at the time of BNE, as we do ORA with a non-zero number. But then,
this fragment of code loses any sense. Does anyone know how Z flag
behaves
in such situation?

Hopefully someone knows the answer to this.

Sasha

=================================================================
AUCTION START DATE..: 04/10/97 ** <<INITIAL>> ** 04/10/97 **
AUCTION START TIME..: 08:00:00PM EST # MY HOME AND EMAIL ADDRESS IS: ##
AUCTION END DATE....: 04/28/97 LeftyLe5@delphi.com/Larry Lefebvre
AUCTION END TIME....: 08:00:00PM EST 94 Bailey Ave/Lewiston, ME 04240
#################################################################
IMPORTANT: I am having problems posting the entire Auction, so I am only
giving you the hi-lites of it. There is lots more good stuff
besides what is in the hi-lites. There are a total of over
350+ games from various classic and not so classic systems.
This auction may have already been sent to you if I have had
prior dealings with you, but if you are someone who didn't
receive it, let me know if your interested and I'll send you
the latest update. DON'T MISS THIS ONE!!! ***MANY RARES***
#################################################################
#
Welcome to Lefty's Sixth (6th) MONSTER Auction(See NOTE BEL). This Auction
contains many classic items, and some not so classic ones. I have divided
this Auction into sections to make it easier for you to quickly go to the
section that you might be interested in. Any notes shown in these sections
apply to that section only. Below, you will find a quick reference to each
of the sections, including some hi-lites. These will be followed by the
Minimum Bid Increases (placed up front for easier reference), the Special
Announcements area, the sections listing the games, and finally the rules
which are at the end of this Auction. Enjoy!
#
NOTE: If you wish to be on my mailing list for this auction and possibly
others, just drop me an email request. Updates will be sent out
6-times a week (Mon thru Sat) around the 8:00PM EST to 12-Midnight
timeframe, to all those who bid or request to be on my mailing list.
Placing a bid in one of my Auctions automatically places you on my
mailing list, and you will receive updates for that Auction.
#################################################################
#
Quick Reference Guide to the Game Sections:
=========================================
```

6A- NINTENDO Carts (Loose unless noted - 130+ Games - Many **RARES**).
Bible Adv's, Darkwing Duck, D&D: Pool of Radiance, KLAX,
Li-Nemo Dream Master, Treasure Master, Venice Beach Volleyball
---
6B- ATARI 800XL/XE & ATARI ST INFOCOM Games(15+ Games -Boxed/Complete).
Bard's Tale, Powermonger, Shadowgate, Ultima I,II,III, Univited,
>All games by Broderbund, Elec. Arts, Epyx, Microprose,
Mindscape, Origin Sys, and Strategic Sim.

6C- ATARI 800XL/XE & ATARI ST MISC Games (45+ Games - Boxed/Complete).
Lurking Horror, Nord and Bert, Plundered Hearts, Trinity

6D- COLECO Carts (Boxed/Complete - 15+ Games - Some **RARES**).
Gateway to Apshai, Montezuma's Revenge, Sector Alpha

6E- INTELLIVISION Carts (Boxed & Mostly Complete - 20+ Games).
B-17 Bomber, Big League Baseball, Horse Racing, Word Fun

6F- COMMODORE-64 Carts (Loose - 35+ Games - Many **RARES**).
Learning with Leeper, Memory Manor, Wizard of id's Wiztype,
Atarisoft: Battlezone, Dig Dug, Galaxian, Jungle Hunt, Pac-Man
---
6G- COMMODORE-64 Carts (15+ Games - Boxed/Shrinkwrapped/Complete).
Infinity Machine, Pole Position, Time Bound, H.E.R.O

6H- COMMODORE-64 Disks (Boxed & Complete unless noted - 50+ Games).
D&D: Gateway Savage Frontier, Curse Azure Bonds, Dragon Strike
Mindscape: Hig Roller, Spell of Destruction, Infocom: Suspended
---

If you have a Mac, you can use AtariVEdit (available from the Rainbow site). Open a disk image that has the MENU program on it and add/remove whatever binary files you wish. Save it with a different name--voila: custom megaimage.

Ball Blaster was the "pirate" pre-release of Ball Blazer.. it was in file
form with no fancy intro. Ball Blazer was Eyypx/Lucas Film original
release which came after the Ball Blaster. Ball Blazer has more bells n
whistles but the game is the same.

RE : Guy up in Canada using custom BBS software
I think you are referring to Alfred. (He made a special version of ARC called ALF and he was friends with Bob Puff and used BOB PUFFs BBS program) His BBS was the Programmers Aid BBS, but I dont think its still online...

Where is the latest version of Clay Halliwell's FlickerTerm 80 available? The latest I see on UMich is 0.37, but I know there at least 0.51 out there.

Could someone upload the latest release to UMich? (i.e., get it to Bill Kendrick at kendrick@zippy.sonoma.edu)

Thanks!

Why didn't you say so? Protector (or Protector II) from Synapse - the game I first saw on an Atari, that convinced me that I wanted an Atari. Excellent game.

Yogi (noone@nowhere.com) wrote:

: Ah, the bad old days. Hearing the printer print out a call at 3:30 AM,
: rushing to see who it was, what he was going to u/l.

Brings back memories as well. I went through a few BBS programs before running Forem XE. The interesting thing is that I was waiting for a call, and went to sleep, setting up my phone flash unit to my lamp, since I took off my hearing aids. I didn't have to wait long.

: Fielding requests for stuff. (wish I had a zip drive connected to the
: bbs then!)

I remember a BBS out in Ohio, Cleveland I think, called Dr. Download. I'd call every now and then, and even pissed off the sysop at one time.

: The flame wars over "WWF Main Event" every saturday.

One particular board had a rather interesting discussion called "New Clear Fizz Iks," and was one of the longest-running threads in BBS history. It went from a subject line to becoming a message base. It's still there, *11* years later, though not as much is posted there.

: I missed more sleep then then ever......

...and it was the going to sleep at 3am, and having an 8am class the next day. 4 hours sleep doesn't do you good at all.

Lord Spatula (Urchlay@bell***south.net) wrote:

: As far as your ERROR - 136's go, occasionally you will get a bad binary,
: but most likely you are trying to run programs from one of Yogi's
: Mega-Image format .ATR disk images. These will not work properly under
: any Atari DOS. You need to get the MENU.ATR diskimage and make it drive
: D1:, and make the megaimage drive D2:, and boot with BASIC disabled (see
: above); you will see a menu of the games on the MegaImage... BTW I never
: could get Joust (from Games #1, I think) to work.

I mostly see the 136s when I use MyDOS and the H: handlers, including the megaimages. What I've done is type the entire filename, rather than wildcards. Seems it's looking for the filename which has the wildcards. Weird. It doesn't do that with the other DOS programs.

One question... In the listing of what's in the megaimagees, there's a little something that says "copy to dosmenu." If I'm understanding this right, I should copy it to an H: device? There's conflicting stories on this every now and then.

Also, sometimes I get a trashed .ATR file when I try to run some of these "copy to..." files. What causes it to be trashed, and unloadable? I have backups of that file, so it's no problem to overwrite it with a good copy.

Oh, definitely! Asteroids on the 7800 is almost worth the price of the
system alone! (Well, at the price you can pick 7800's up for, they're
worth it ANYWAY)

> : While I'm at it-- WHY are the 7800 Donkey Kong games so hideous!? (DK, DK

I'm pretty sure the DK games were post crash (I.e., Tramiel era).. maybe
they just didn't want to pay someone to do it right? I MUCH prefer the 1st
generation 7800 games (Joust, Asteroids, Food Fight, Ms. Pac., etc) to the
DK's. ;) Of course, the later 7800 games, when it was "too little too
late" are also quite good. (Ninja Golf's quite fun, if a little repetitive
after a few holes)

That would be Protector and Protector II, by Mark Potter of Synapse Software. Both are really more or less the same gameplay wise, although Protector II is waaaaay more playable (IMO). ;-)

Files with the extension .gz are GNU Zip archives, NOT to be confused with PKZip. GNU Zip is native to Unix/Linux, and files archived with .GZ are rarely of any use to Messy-DOS users, let alone Atari 8-bitters.

A price on the whole package? Oh, lets see....how about $5000.00
whoa, that's way too much...let's bicker this down a bit or two.
it would probably have to be at least $300.00., if you look at systems
going for $100 and more, Magazines being sold for 6,7, 8 bucks apiece,
books for 5-15$, game cartridges for 5-20, etc, etc.
I will put a list up over the weekend with some pricing. I've gotten a few
requests and will honor those folks first. I'm not trying to rip anyone
off, but I don't want to be ripped either. If there's a market for this
stuff, I want a fair price, and I see stuff being sold on this newsgroup,
auctions, and web sites for what I consider reasonable.

Source record: 73912

Just to set things straight, I realize everyone wants to get the most bang for their buck, that this Atari stuff has great sentimental value, etc, etc, and it is still widely used, especially in Europe...therefore what I want is a fair offer for my stuff. Someone already offered $100 for the system, and several folks are interested in the rest.
Looking at other messages on this newsgroup would leave me to believe that my stuff is worth a bit. I see magazines being sold for 5-10 bucks each, games for 3-15, etc.
I don't really want that much for my Atari stuff, Just a fair deal. I will throw in whatever extras I have to the person that wants to purchase, as once the system is gone, I have no use for the goodies.

I will post a list over the weekend. For the people that have emailed me..you will get a personal response and first choice of the goods in the order the mail was received. And the price will be reasonable

Source record: 73915

Well, Glenn (Krishna), you are absolutely right that I have not changed the Intro Screen/Copyright date in quite a while. That does not however mean that the BBS itself has not changed. I guess I
should track down that 2400 baud upload message though, since that problem was solved within about 2 months from the time it first started appearing.

As for your connect and throughput rates, all I can say is that your modem doesn't like mine, or your settings are screwy. I have callers at full 28.8k every day, and in the past 5+ years, I can
only only remember about 4 people who had problems like you do. None of my 100+ regular users ever has a problem, with throughput, uploading, or downloading.

Since my BBS is one of the most popular in the Portland, OR area, it must not be nearly as bad as you would have everyone to believe. Granted, I have never had very many message posters, but I get
many file transfers, and many callers.

According to many other Sysop's in the area, my BBS has experienced a far less cutback of callers than most of them have, so I am obviously doing something right.

Bottom line here, is if you don't like Carina, or me, that is your opinion, and you are entitled to that. But have maliciously stated many things as facts which are simply un-true, and that my friend
is wrong. My callers like Carina, and 50+ Sysop's like Carina. You don't, fine, but let's stick to the facts here, which are exactly as I have stated.

Obviously you didn't download Carina and run it, or you could have seen first hand just how much HAS changed since you were a Carina Sysop!

If the machine is locked up, hitting Reset SHOULD generate a cold start. Another easy way to do it, is simply type BYE from Basic, then hit RESET for a cold start.

To get over 128 Megs of HD space, you swap out your partitions. In Carina BBS using an MIO, you can have up to 128 megs per message/file base by using this method. If I can ever get the info for
how to do it onm a BB, I will write that into the software as well.

In the preface of the Atari Basic Source Book by Bill Wilkinson, Kathleen O'Brien and Paul Laughton it is indicated that they were involved in a deadline to produce a basic for the Jan 1979 CES. I cannot remeber reading anywhere else that the system appeared before this.

In the original Mapping the Atari by Ian Chadwick if memory serves he talks about the GTIA in machines produced in the latter half of 1982.

>

The only difference between the 800XL anf the 130XE is the extra memory and the Freddy chip. Antic and GTIA are the same, but the Freddy does support the extra memory, without losing the graphics. (at least as far as I can remember on the subject.)

>Is that it? Max resolution wasn't increased, was it? (gr.8, at 320x192)

The maximum number of simultaneously available colours did increase from 128
to 256 (although you needed DLIs to display them all), bit that was because
the number of available colours increased from 128 to 256. This was due to
an extra bit added to the luminance. Now there were 16 hues and 16 (as opposed
to 8) luminances. I think (but I'm not sure), that the extra luminances were
only available in the GTIA modes (9, 10, 11).

With the CTIA, the Antic was entirely responsible for deciding how screen
memory was translated into a screen image (although the CTIA was responsible
for players and missiles). The GTIA added three extra modes that read four
bits of data from the Antic and combined them to make a single pixel.
These were known as modes 9, 10, and 11. The Antic chip treated these modes
just like mode 8, but the pixels were combined to produce more colours at the
cost of horizontal resolution. It was because of this that modes 9,10,11 did
not have the ability to have a text-window like the other modes (unless some
DLIs were used). It was theoretically possible to activate the GTIA's
capabilities from other Antic modes, but this wan't much use (Do you remember
typing "POKE 623,64" from basic? Nothing would happen with a CTIA, but with a
GTIA, the text would look weird).

The GTIA also corrected a bug the CTIA had in aligning players and missiles
with mode 8 graphics (I think the graphics were shifted by half a colour clock).
This also had the effect of changing the colours of images where colour
artifacting was used to create extra colours.

>When did machines first start shipping with GTIA installed? I now believe the

Just out of curiosity, were any CTIA Ataris ever shipped to Europe?

>I state in the FAQ that the 130XE has "a few new graphics capabilities", not
>available in any of the other XL/XE's. What was I talking about? Are there
>any, or was I making that up? (It was based on postings here, I'm sure.)

I believe the 130XE doesn't have extra graphics capabilities. Perhaps
the person who told you this could have meant that more graphics can be
stored in 128K than in 64K.

AE.

>
> Hmm... I missed that. MyDOS was and still is my favorite AtariDOS, though
> I switched around with Sparta and 2.5, and a few others.
>

...my favorite Atari DOS was Sparta 3.2d (I never had an X-cart though,
I would have liked that better..)

...unless I was using Turbo BASIC, which didn't work with Sparta. Then I
would use SmartDOS 8.5 (or was it 5.8?) or SuperDOS (the only one I ever
found that would run in 1050 US Doubler high-speed mode besides Sparta)

...and for games, Fenders 3-sector loader...

3519. Jeff-Gamer's Classic Computer Items Auction! Part 1

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-11 00:00:00 UTC
From: Jeff Rothkopf <JeffGamer@ipof.fla.net>
Message-ID: <5im3gv$h3a@ipof1.fla.net>

** Jeff-Gamer's Classic Computer Items Auction! 8) -- Initial Posting **
** PART ONE **

===> TO SUBSCRIBE, WRITE TO JeffGamer@ipof.fla.net <===

Hi! Welcome to Jeff-Gamer's computer-based auction...! This auction contains a few hundred new-in-the-box and loose cartridges, disks, tapes/cassettes, systems, books, and hardware peripherals for the following systems:

* Amiga * Commodore 16 & Plus/4
* Apple 2 * Commodore 64
* Apple Lisa * Commodore Vic-20
* Apple Macintosh * IBM
* Aquarius * Radio Shack's Tandy/TRS80/Coco
* Atari 400/800/XE * Spectravideo SV316
* Atari ST * Sperry
* Coleco Adam * Texas Instruments TI99

Many of the items in the auction are from my own collection, many others (particularly the new-in-the-box items) are being offered for a local dealer who wants to liquidate his stock.

==========
THE MAIN DETAILS
==========

The regular part of the auction will run for ten days, from Tuesday, April 9 until Thursday, April 18, followed by a ONCE-TWICE-SOLD portion.

VIDEO GAME TRADE BIDS ARE *VERY* WELCOME: There are two ways of bidding: the main way, obviously, is with cash offers. Alternatively, I'm interested in trading for classic video games (Atari, Adventurevision, Vectrex, Colecovision, Atari Video Music, Intellivision, Odyssey, Phillips Videopac, Bally, Fairchild, Microvision, Texas Instruments, RCA Studio II, Turbografx, Sega Master System, and others), as well as select electronic handhelds and *cartridges* for the other classic 8-bit computer systems. If you have items for these systems and want to talk about potential trade bids, let me know, and feel free to send over lists of any length that include cartridge/box/manual/peripheral/system information! Trade offers that include items I need and really want for my collection will get priority, and will be valued accordingly... ;) Also, please ask for a copy of my full "availability" list if you're interested in trading and have items I'm interested in. I have over 2000 items available for swapping, including many cartridges, systems, and peripherals for classic and modern video game and computer systems that aren't listed below. I also have some board games, electronic

handhelds, and records (LPs and 45s).

MINIMUM BIDS INCREMENTS: $1 on items up to $14.99, $2 for items $15-29.99, and $5 for items $30 and higher. In case of duplicate bids being submitted by two bidders, the first bid received is the bid accepted.

*** Please always read the "New Notes" section...it sometimes contains information that bidders really do need to know... ;) Also, I strongly urge you to read the RULES AND GUIDELINES section at the end of the second half of the updates at least once, since I assume if you place a bid that you've read and agree to what the rules say.

================================ NEW NOTES ================================

** PLEASE remember to provide your name, address, and phone number when you place your first bid, even if I already know you. I will keep all personal data confidential, and will provide my own address/phone number info to the subscribed bidders. For my own protection, I can't accept bids if I don't have information on how to contact you off-line.+ (see full rules at the bottom of this message).

** Full rules/guidelines will be e-mailed to all bidders and subscribers when they receive their first update. If you'd like to see the rules/guidelines again, just ask, and I'll send 'em right over! :)

** I may be adding a number of additional boxed cartridges and books for a few of the classic computer systems -- I'll let you know if/when this happens...!

==

If you'd like to be subscribed to this auction so that you receive all updates via e-mail, or if you'd like to make an offer or place a bid, send an e-mail message to JeffGamer@ipof.fla.net. If you will not have access to e-mail for any length of time, I *will* accept phoned-in bids and will provide verbal updates...contact me to arrange it. The auction will be mostly held via e-mail, with very occasional newsgroup postings.

I also plan to begin a board games auction this week...let me know if you'd want to be subscribed to that, too...!

In advance, good luck in the auction!

==
ADAM/COLECOVISION COMPUTER CASSETTES (all come in the case with the cardboard insert)

AD1: AdamLink.. -- In the case with the cardboard insert!
...MINIMUM BID $3
AD2: Buck Rogers.... -- In the case with the cardboard insert!
...MINIMUM BID $3
AD3: Dragon's Lair. -- In the case with the cardboard insert!
...MINIMUM BID $3
AD4: Electronic Flashcard Maker -- In box!

...MINIMUM BID $3
AD5: SmartBasic.. -- In the case with the cardboard insert!
...MINIMUM BID $3
AD6: Zaxxon -- In the case with the cardboard insert!
...MINIMUM BID $3

AMIGA DISKS -- All are New In The Box!

AM1: Aegis Animator (Next Frontier Corp., 1985) -- Shrinkwrapped!
...MINIMUM BID $5
AM2: CFC Championship Football (Activision/Gamestar, 1986) --
Shrinkwrapped! For Amiga AND Commodore 64.
...MINIMUM BID $5
AM3: Defender of the Crown (2 disks, Adventure Entertainment, Master
Designer Software, 1986). -- Shrinkwrapped in a pressed-in box!
...MINIMUM BID $5
AM4: Feud (Mastertronic). -- Mostly Shrinkwrapped!
...MINIMUM BID $5
AM5: Financial Cookbook (Electronic Arts) -- Shrinkwrapped!
...MINIMUM BID $5
AM6: Flight Simulator II (SubLogic Corp., 1984). -- Shrinkwrapped in a
pressed-in box!
...MINIMUM BID $5
AM7: Hacker II: The Doomsday Papers (Activision, 1986) -- Shrinkwrapped!
...MINIMUM BID $5
AM8: Hunt For Red October, The (Datasoft, 1984). -- Shrinkwrapped!
...MINIMUM BID $5
AM9: Logistix (Grafox/Progressive Peripherals & Software). -- Mostly
shrinkwrapped in a notebook-style box/manual! -- Spreadsheets,
time management, database, graphics
...MINIMUM BID $5
AM10: Silent Survivor (MicroProse, 1985) -- Shrinkwrapped in a pressed-in
box!
...MINIMUM BID $5
AM11: Space Ranger (Mastertronic) -- Shrinkwrapped in a *slightly*
pressed-in box!
...MINIMUM BID $5

APPLE 2 DISKS -- All New In The Box!

AP1: Bureacracy (Doug Adams/Infocom, 1987)
...MINIMUM BID $5
AP2: Demon's Forge (Mastertronic) -- Shrinkwrapped in a somewhat
pressed-in box!
...MINIMUM BID $5
AP3: Easy Working Tri-Pack (Spinnaker, 1987) -- Contains "The Writer"
word processor, "The Filer" spreadsheet, and "The Planner"
data base.
...MINIMUM BID $5
AP3a: Karate Champ (Data East, 1985) -- For Apple II AND Commodore 64!
-- Shrinkwrapped!

...MINIMUM BID $5
AP3b: Kung Fu Master (Data East, 1984). -- For Apple II AND Commodore 64!
-- Shrinkwrapped!
...MINIMUM BID $5
AP4: Practicalc II (Practicorp, 1984) -- Shrinkwrapped in a pressed-in
box! -- A spreadsheet with word processing, database, and
graphics capabilities
...MINIMUM BID $5
AP5: Robotron: 2084 (Atarisoft, 1983)
...MINIMUM BID $5
AP6: The Works! (First Star Software, 1985) -- Home Software -- letter
writer, typing teacher, math, graphics, music composer,
and more...!
...MINIMUM BID $5

AQUARIUS HARDWARE:

AQ1: Aquarius SYSTEM (with plugs and hand controllers)
...MINIMUM BID $15
AQ2: Aquarius DATA RECORDER
...MINIMUM BID $10
AQ3: Aquarius MINI EXPANDER
...MINIMUM BID $15
AQ4: Aquarius PRINTER
...MINIMUM BID $20

AQUARIUS SOFTWARE:

AQ5: 16K Memory Cartridge
...MINIMUM BID $2
AQ6: FileForm (complete in box with spiral instruction book)
...MINIMUM BID $4
AQ7: FinForm (complete in torn box with spiral instruction book)
...MINIMUM BID $4
AQ8: Night Stalker
...MINIMUM BID $2
AQ9: Tron Deadly Discs.
...MINIMUM BID $2
AQ10: Utopia
...MINIMUM BID $2
AQ11: Data Recorder dox
...MINIMUM BID $1
AQ12: Aquarius "Simplified Instruction Cards" manual
...MINIMUM BID $1
AQ13: FileForm Page Editor manual
...MINIMUM BID $1
AQ14: FinForm Worksheet manual
...MINIMUM BID $1
AQ15: Program catalog (includes unreleased games & hardware)
...MINIMUM BID $1

=====> ATARI COMPUTERS: 400, 800, XE, ST <=====

ATARI SYSTEMS, HARDWARE, AND BOOKS:

AT1: Atari 400 computer system.
...MINIMUM BID $20
AT2: 32K Ram Board (by Mosaic Electronics). -- New in the Box!
...MINIMUM BID $5
AT3: Atari BASIC reference manual (332 page book)
...MINIMUM BID $2

ATARI 400/800/XE CARTRIDGES & CARTRIDGE/PERIPHERAL COMBINATIONS:

AT10: Alien Garden
...MINIMUM BID $2
AT11: Alphabet Zoo (dox only)
...MINIMUM BID $1
AT12: Astro-Grover
...MINIMUM BID $2
AT13: Atari Light Pen (including AtariGraphics cartridge)..
-- New in a damaged box!
...MINIMUM BID $5
AT14: Ballblazer (XE)
...MINIMUM BID $2
AT15: BASIC
...MINIMUM BID $2
AT16: Centipede
...MINIMUM BID $2
AT17: Demon Attack
...MINIMUM BID $2
AT18: Donkey Kong
...MINIMUM BID $2
AT19: Donkey Kong Jr.(?)
...MINIMUM BID $2
AT20: Ernie's Magic Shapes ("B" written on label, slight label wrinkling)
...MINIMUM BID $2
AT21: E.T. Phone Home
...MINIMUM BID $2
AT22: Flight Simulator II (XE)
...MINIMUM BID $2
AT23: Frogger..
...MINIMUM BID $2
AT24: Kindercomp
...MINIMUM BID $2
AT25: K-Razy Antiks (by CBS)
...MINIMUM BID $2
AT26: K-Razy Shoot-Out (by K-Byte)
...MINIMUM BID $2
AT27: Math Mileage
...MINIMUM BID $2
AT28: Miner 2049er
...MINIMUM BID $2
AT29: Ms Pac-Man (has a loose board inside)
...MINIMUM BID $2

AT30: Music Composer
...MINIMUM BID $2
AT31: Pac-Man.
...MINIMUM BID $2
AT32: Qix.
...MINIMUM BID $2
AT33: Space Invaders
...MINIMUM BID $2
AT34: Star Raiders
...MINIMUM BID $2
AT35: Submarine Commander (by Thorn EMI)
...MINIMUM BID $2
AT36: Whiz Kid (by Romox) -- New in a pressed in box, Shrinkwrapped!
...MINIMUM BID $5

ATARI 400/800 DISKS -- ALL NEW-IN-THE-BOX!

ATD1: Atari Music I -- New in the box!
...MINIMUM BID $5
ATD2: Atari Music II -- Shrinkwrapped in a slightly pressed-in box!
...MINIMUM BID $5
ATD3: AtariLab Starter Set with Temperature Module.. -- New in the box!
...MINIMUM BID $5
ATD4: Castle Wolfenstein (Muse Software) -- Shrinkwrapped in a pressed-in box!
...MINIMUM BID $5
ATD5: Chipmunk Atari Disk Copier (by Microdaft) -- Copies protected software! (New, Shrinkwrapped!) Disk-based
...MINIMUM BID $5
ATD6: ET Phone Home (1986 version) -- New in the box!
...MINIMUM BID $5
ATD6a: The Eidelan (Epyx & Lucafilm, 1985) -- For Atari AND C64 computers! --- New in a pressed-in box!
...MINIMUM BID $5
ATD7: Facts In Five (Avalon Hill/Microcomputer Games, 1982) -- New in the Bookshelf-Style Box!
...MINIMUM BID $5
ATD8: Home Fim Manager. -- Shrinkwrapped in a somewhat pressed-in box!
...MINIMUM BID $5
ATD8a: Walt Disney's Mickey in the Great Outdoors (New In The Box!)
...MINIMUM BID $5
ATD8b: Micro League Baseball (1984) -- For Atari AND C64 computers! --- Shrinkwrapped!
...MINIMUM BID $5
ATD9: Paint -- Shrinwrapped!
...MINIMUM BID $5
ATD10: Silent Service (MicroProse, 1985) -- Shrinkwrapped in a somewhat pressed-in box! -- Submarine simulation!
...MINIMUM BID $5
ATD11: Spy Vs. Spy: Volume I & II (Avantage/First Star, 1986) -- Shrinkwrapped in a pressed-in box!

...MINIMUM BID $5
ATD12: Tanktics (Avalon Hill/Microcomputer Games) (New in the box -- all
cardboard pieces unpunched!) -- Big boxed board game/disk
combination program!
...MINIMUM BID $5
ATD13: The Top Gunner Collection/3-in-1 (Microprose, 1986) -- Shrinkwrapped!
-- contains Hellcat Ace, Air Rescue, and MIG Alley Ace
...MINIMUM BID $5
ATD14: Timewise. -- Shrinkwrapped! -- A time management program
...MINIMUM BID $5
ATD14a: Video Poker (Mastertronic) -- For Atari AND C64 computers!
--- New in the Box!
...MINIMUM BID $5
ATD15: Virtuoso Desktop Performance Studio (Virtuoso Software, 1987).
-- Shrinkwrapped!
...MINIMUM BID $5

ATARI 8-BIT -- CASSETTES

ATCS1: States & Capitals
...MINIMUM BID $2
ATCS2: Atari Minicrossword/24k -- New in the plastic container!
...MINIMUM BID $5

ATARI ST - DISKS -- ALL NEW-IN-THE-BOX!

ST1: A Mind Forever Voyaging (an Infocom adventure, 1985)
-- Box is water-damaged
...MINIMUM BID $4
ST2: Data Manager (TimeWorks, 1982)
...MINIMUM BID $5
ST3: DataTrieve (Abacus). -- Shrinkwrapped!
...MINIMUM BID $5
ST4: Dos Shell (MichTron). -- Shrinkwrapped!
...MINIMUM BID $5
ST5: Easy-draw (Migraph, 1985). -- Shrinkwrapped! -- A Gem program
...MINIMUM BID $5
ST6: Enchanter (Infocom, 1984)
...MINIMUM BID $5
ST7: Exodus: Ultima III (Origin Systems/Electronic Arts, 1985)
-- Shrinkwrapped!
...MINIMUM BID $5
ST8: Flight Simulator II (SubLogic, 1986)..
-- Shrinkwrapped in a pressed-in box!
...MINIMUM BID $5
ST9: GFC Championship Football (Gametar, 1986). -- Shrinkwrapped!
...MINIMUM BID $5
ST10: HabaCom (HABA) -- Shrinkwrapped in a slightly pressed-in box!
...MINIMUM BID $5
ST11: HabaView (HABA).. -- Shrinkwrapped!
...MINIMUM BID $5

ST12: HabaWriter (HABA). -- Shrinkwrapped in a pressed-in box!
...MINIMUM BID $5
ST13: HabaWriter II (HABA) -- Shrinkwrapped!
...MINIMUM BID $5
ST14: Hex (Mark of the Unicorn, 1985) -- Shrinkwrapped in a pressed-in box!
...MINIMUM BID $5
ST15: I. S. Talk: Telecommunications (Modern Imageworks)..
-- Mostly shrinkwrapped!
...MINIMUM BID $5
ST16: King's Quest (Sierra, 1984) -- Shrinkwrapped in a slightly
pressed-in box!
...MINIMUM BID $5
ST17: Mercenary: A flight simulator with vector-like graphics! (Datasoft,
1986) -- Shrinkwrapped in a pressed-in box! -- a Gem program
...MINIMUM BID $5
ST18: PaintPro (Abacus) -- Shrinkwrapped!
...MINIMUM BID $5
ST19: Rogue (Epyz, 1985). -- Shrinkwrapped!
...MINIMUM BID $5
ST20: Solutions: Haba Check Minder (HABA, 1985). -- Shrinkwrapped!
...MINIMUM BID $5
ST21: Solutions: Habadex Phonebook (HABA) -- Shrinkwrapped!
...MINIMUM BID $5
ST22: Solutions: HabaMerge (HABA) -- Shrinkwrapped!
...MINIMUM BID $5

ST30: Winter Games (Epyz, 1985) -- Shrinkwrapped!
...MINIMUM BID $5
ST31: WordWriter ST (TimeWorks, 1983) -- Shrinkwrapped!
...MINIMUM BID $5

=====> COMMODORE COMPUTERS: C16, PLUS/4, C64, C128, VIC-20 <=====

COMMODORE VIC-20 CARTRIDGES:

VIC1: Cave In. (Spectravideo) -- NEW in box with manual!
...MINIMUM BID $5
VIC2: Gorf.
...MINIMUM BID $2
VIC3: Omega Race.
...MINIMUM BID $2
VIC4: Q-Bert.
...MINIMUM BID $2

COMMODORE 64 *AND* VIC-20 ITEMS:

64VC1: Epson Printer Interface Cartridge (for Homewriter Printer). -- New!
...MINIMUM BID $5
64VC2: Cassette Interface for the Vic20 & C64 -- New in a pressed-in
box, shrinkwrapped!
...MINIMUM BID $5

COMMODORE 16/PLUS CARTRIDGES:

16C1: Calc/Plus -- New in the box! (small box tear where box was
originally opened)
...MINIMUM BID $5
16C2: Financial Advisor -- New in the box, Shrinkwrapped!..
...MINIMUM BID $5
16C3: Viduzzles -- New in the box! Still sealed!
...MINIMUM BID $5

COMMODORE PLUS/4 DISKS:
PLD1: Accounts Payable. -- Shrinkwrapped with a notebook-style manual!
...MINIMUM BID $5
PLD2: Accounts Receivable -- Shrinkwrapped with a notebook-style manual!
...MINIMUM BID $5
PLD3: General Ledger. -- Shrinkwrapped with a notebook-style manual!
...MINIMUM BID $5
PLD4: Loans and Investments -- Shrinkwrapped!
...MINIMUM BID $5
PLD5: Payroll -- Shrinkwrapped with a notebook-style manual!
...MINIMUM BID $5

COMMODORE 16 & PLUS/4 CASSETTES (All New In The Box!)
16PL1: Math Games and Word Problems -- New in a slightly pressed-in box!
...MINIMUM BID $5
16PL2: Money Decisions.... -- Shrinkwrapped!
...MINIMUM BID $5
16PL3: Starter Productivity Software
...MINIMUM BID $5

COMMODORE 16 & PLUS/4 CASSETTE *AND* DISKS IN ONE PACKAGE:
16PL4: Letter Match/More Or Less -- Shrinkwrapped!
...MINIMUM BID $5
16PL5: What's Next Letters/What's Next Numbers -- Boxed (box has a tear in it)
...MINIMUM BID $5

COMMODORE 64 CARTRIDGES

64C0: Battlezone (by Atarisoft) -- Complete and New in a pressed-in box!
...MINIMUM BID $5
64C1: Big Bird's Special Delivery (by CBS). (Complete in box with manual and
instruction card and foam insert!)
...MINIMUM BID $5
64C2: Centipede.
...MINIMUM BID $2
64C3: Clowns.
...MINIMUM BID $2
64C4: Fast Load.
...MINIMUM BID $2
64C5: Frogger.
...MINIMUM BID $2
64C5a: International Soccer -- New and Shrinkwrapped, in a pressed-in box!
-- Note: I have two versions of the box: blue on gold writing
on medallion, and white on gold writing on medallion. If
anyone cares which one they get, let me know. ;-)
...MINIMUM BID $5
64C6: Kickman..
...MINIMUM BID $2
64C7: Kids on Keys.
...MINIMUM BID $2
64C8: Kindercomp.
...MINIMUM BID $2
64C9: Number Tumblers (by Fisher-Price).
...MINIMUM BID $2
64C9a: The Pit (by HesWare).. -- New in the box, shrinkwrapped!
...MINIMUM BID $5
64C10: Sea Speller. (by Fisher-Price)
...MINIMUM BID $2
64C11: Star Post.
...MINIMUM BID $2
64C12: Tapper.
...MINIMUM BID $2
64C12a: Viduzzles (New in a pressed-in box, shrinkwrapped!).
...MINIMUM BID $5
64C13: Webster: The Word Game (by CBS Software).
...MINIMUM BID $2
64C14: Commodore 64 cartouche generic box
...MINIMUM BID $2

COMMODORE 64/128 - DISK-BASED - ALL ARE NEW IN THE BOX!

64D1: 64-Pac (Computer Software Associates) -- New in slightly squished box!
...MINIMUM BID $5
64D2: Adventureland: Saga #1 (Thunder Mountain, 1981) - New in plastic case!
A Scott Adams adventure--supports Votrax speech synthesizer
...MINIMUM BID $5
64D3: Assembler Monitor - The Complete Machine Language Development Package
(Abacus) -- Shrinkwrapped!
...MINIMUM BID $5
64D4: BASIC-64 (Abacus Software) -- Notebook-style box

...MINIMUM BID $5
64D5: Better Working (Spinnaker) -- Shrinkwrapped! -- Power C language
...MINIMUM BID $5
64D6: Business Systems - Expanded Version (Timeworks, 1983) -- Mostly
shrinkwrapped in a VCR-style case!
...MINIMUM BID $5
64D7: Cadpak-64 - Enhanced Version (Abacus) -- "The Full Featured Design &
Drawing Program"
...MINIMUM BID $5

...MINIMUM BID $2
TX26: Super Demon Attack..
...MINIMUM BID $2
TX27: TI Invaders.......
...MINIMUM BID $2
TX28: Tombstone City....
...MINIMUM BID $2

RULES & GUIDELINES:

1) DEADLINES: The regular part of the auction will run for nine days, from Friday, April 11 until Sunday, April 20, followed by a ONCE-TWICE-SOLD phase. In the once-twice-sold phase of the auction (which commences after April 18), all items are marked as GOING ONCE. If they do not receive any bids before the next update, they'll move to GOING TWICE, and then will be SOLD in the successive update if no bids arrive beforehand. New bids reset the countdown on that item to GOING ONCE.

2) UPDATES: I will post updates on-line once or *maybe* twice a week. I will also e-mail updates to all e-mail subscribers and bidders. E-mailed updates will be sent _on_average_ once a day (expect only one update on the weekend).

3) INTEGRITY, AND HONORING YOUR BIDS: Do NOT bid on an item unless you are prepared to honor that bid and buy what you bid on at that price. I expect bidders to act honorably--bids not made in good faith hurt all others involved in the auction--so if you don't intend to honor your bid, don't make it. If you do not honor your high bids, you will be barred from any future auctions I intend to hold in the very near future, and I will make your name and e-mail address available to anyone who requests the list.

3a) WITHDRAWN BIDS: Bids may only be withdrawn if I have not yet sent out an auction update that includes the bid. Otherwise, once a bid is submitted, it may not be withdrawn and I expect that it will be honored in the event that it is the high bid. So please don't bid on an item and then change your mind a week later, even if you found someone else who had the same item for less than you already bid. I've had the same thing happen to me in auctions, and if my bid still comes in as high bid, I buy it and wind up with two, because in an auction this is only fair.

4) CONDITION OF ITEMS: All items in this auction are in good condition...I've tried to give detailed descriptions of particularly assets or flaws. Expect that some items may have *minor* flaws (an ink spot on a box, a small scratch on a cartridge), but major flaws such as pressed-in boxes, torn labels, pen marks, or multiple personalities will be noted next to the item. Although some items note particularly excellent conditions in their listing, all items are in good condition and may range from good to near-mint, those ones just stood out as strikingly good to me while I was sorting through what I have. Please feel free to ask if you need more information--I want everyone to be pleased with what they win, so better to know in advance.

5) SHIPPING: Buyer pays shipping, which is not included in placed bids. Shipping will be determined at the end of the auction, when I box everything up and run to the post office to figure out approximately what shipping will cost. Some of the programs are particularly heavy, while others are light. Shipping will be fair--I have no intention of saying, "Oh, yeah...that Spectravision game will cost over sixty bucks to ship...snicker snicker..." Payment is by cash, check or money order in US Funds, and should be sent within 5 days of the auction's end. If payment is by check, I'll need to wait for my bank to tell me it cleared (usually 7-10 days after deposit...). Bidders from outside the United States should send a

postal money order, payable in U. S. Funds, or cash.

6) HOW TO PLACE A BID, AND NAME/ADDRESS/PHONE NUMBER INFO: Place a bid by item number and/or description. Your first bid must include your name, address, and phone number (I will provide same to all bidders when they send that info to me--this is for both your protection and for mine). I will use the first part of your E-mail address when listing bids. If you wish to remain anonymous, tell me what pseudonym you would like to use and then remind me of it each time you bid (my memory is absolutely, uh, what was I saying...?). For people who will have difficulty getting access to e-mail, bids *will* be accepted by phone, as long as we pre-arrange it. Let me know if you need to do so. ;)

7) MINIMUM BIDS: Minimum bids are listed for each item.

8) MINIMUM BID INCREMENTS are $1 on items up to $14.99, $2 for items $15-29.99, and $5 for items $30 and higher. In case of ties, the first bid received is the bid accepted.

9) TRADING: Trade offers are encouraged. I collect cartridges, manuals, boxes, and hardware mainly for the following: Adventurevision, Atari 2600, 5200, 7800, Atari Video Music, Colecovision, Vectrex, Fairchild, Intellivision, Odyssey, Texas Instruments TI99, some pong systems and other standalones (particularly if they relate even in name-only to older video games & companies), Bally, Turbografx, Microvision, Sega Master System, and Atari & Commodore computers. However, the full list of systems I collect for is considerably larger than *that*! E-mail me with your list of items available for trade (or we could chat via phone, I'm reachable from 10 pm to midnight most nights). Note that since I don't think it's fair to simply remove an item from the auction when I get a trade offer I like, I will follow one of two routes (or a hybrid of the two): #1: a suitable cash-equivalent value for the trade offer based on my particular desire for the item (if I really want it, this will be higher than normal!) and on its estimated value will be set and entered as the bid. #2: I'll let the rest of the bidders know about the offer and set a time-limit on a counter-offer.

10) REMOVAL OF AUCTION ITEMS: Items may be removed at my discretion, although since I don't particularly like the idea of suddenly pulling something out when people are bidding on it, I will usually give notice to affected bidders before doing so.

11) HUMAN ERROR: Auctioneer reserves the right to make changes or correct mistakes made in the posting of this message or along the way.

3521. FS: Atari 8-bit Software, Games, Books, Magazines

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-11 00:00:00 UTC

This is last post, unless something dramatic occurs,
but... frankly Miss Scarlet, this is is beginning to
bore me. And I don't know nothing about birthin' no babies...
then again neither does Planned Parenthood.

If you see anything you want, need, etc MAKE an offer.

If anyone wants to make an offer on the lot, go ahead....
people won't laugh at you (much!).

Buyers will be responsible for all shipping/handling charges.
Sales to contiguous US only.

DID YOU REALIZE THERE IS A RUMOUR CASSETTE TAPES MAKE EXCELLENT KINDLING!

Atari Games for Sale

(All complete with boxes and documentation, unless otherwise noted)

Cassette Tapes
~~~~~~~~ ~~~~~
**AIM Software

t X-Ray Art construction game

**Atari Corp

t States and Capitals Program cassette ONLY, Instructions and
game on tape.

**Cosmi

t Aztec Challenge Seems to be "Mountain King" type game.

t Caverns of Khafka typical cavern-tomb danger graphics
game

t The Crypts of Plumbous A lot like "Defender", as I recall.

t Forbidden Forest Find your way out of a deadly graphic
forest

t Galactic Avenger "Space Invaders" type game

t Professor IQ Series of educational learning games

t Slinky You've played with the springs, now try
them on the screen!!
~~~~~~~~

t Spider Invasion Destroy deadly spider mutations, their
eggs and nest. Are you getting as
itchy as I am?

**Edu-ware Services

t Compu-read 3.0 Tool for improving reading speed and
comprehension. NOT boxed, but in it's
own folder including docs.

**EPYX

t Curse of Ra Expansion module for "Temple of Apshai"
adventure game. Book of Lore missing.

**Program Design, Inc.

t Addition with Carrying Math games for the young. In clear
plastic sleeve.

t Sam the Sea Serpent Sammy will devour your child if he
gives the wrong answer! (Just Kidding
!!). A story and game for your young
ones.

**Thorn EMI -- love their packaging....beta-like plastic containers
(and we all know where beta is)

t Compute 4 & Reversi Connect-4 game and "Go" type game

t Cribbage & Dominoes Cribbage & Dominoes...get the idea?

t Darts So safe, you can even throw them at
your Mother-in-Law

t European Scene Jigsaw Like those plastic toys where you
Puzzles Vol2 slide the tiles to get the picture
together.

t Figure Fun Two games to teach multiplication,
division, etc. Five levels, cover most
ages

t Owari & Bull and Cow Computer renditions of traditional folk
games

t Pool Everybody in the Pool !! No, not that
kind -- tournament and eight-ball,
practice included.

t Snooker & Billiards Pool with fewer balls and no numbers.

t Super Cubes and Slip Rubik's Cube and marble maze in
computer form.

DON'T TELL *ME* YOU HAVEN'T SNUGGLED UP TO YOUR HONEY AND WISHED YOU
COULD OFFER HER A 5-1/4" DISKETTE!!!

5-1/4" diskettes
~~~~~~ ~~~~~~~~~
**Activision

d Master of the Lamps Riddles of music memory and color,
album type packaging

**ALA

d Dragon's Hideaway Gather the Dragon's eggs...make a
medieval omelet??

**Atari

d Caverns of Mars Primitive Zaxxon in a Martian cave

**Atari Program Exchange

d Galahad and the Holy Grail Fairly well known adventure game, in
ziplock packaging.

d Seven Card Stud Monty Webb's poker game. Ziplock
packaging.

**Avalon Hill

d Divex Another darned "teach your kid" number
stuff... don't YOU ever sit down with
him??

**CBS Software

d Success With Math: Math for grade levels 5-8
Fractions

d Success with Math: Grade levels 7-11
Linear Equations

d Success with Math: Grade levels 9-12
Quadratic Equations

**Cosmi

d The E Factor Save your planet against mimes, aliens
and asteroids!! Sorry, Marcel, oops,
that's "Mines"

**Crystalware

d Imperial Walker Idiotic robot elephant from Star Wars

**DataMost

d Ardy the Anteater Anteater slurping up those ants !

d Night Raiders Blow up the alien spaceships
again...don't they ever give up?
~~~~~~

d The Tail of Beta Lyrae Lyrae is blow up the spaceships you
& Round About missed before, Round About .. blow up
strange shapes. Two games in one
ziplock. ~~~

**EPYX

d King Arthur's Heir Camelot adventure game. Has nothing to
do with Royal toupees.

d Temple of Apshai Base for other DUNJONQUEST games.
Includes both cassette version and
5 1/4" disk.

d Upper Reaches of Apshai Another expansion module for Temple of
Apshai. Book of Lore missing.

**Hayden Software

d Final Conflict Futuristic tank warfare game

**K-TEK

d Gorgon Rescue the Golden Fleece with Jason,
beware Medusa, beware this game... it's
Booorrrrriiiinnngggggg.

**KeyPunch Software

d Strategy Simulations Robot Patrol, Star Merchant, Civil War,
Convoy. Sure sounds like public domain
games to me ! In plastic sleeve.

**Learning Company

d Word Spinner Basic building blocks of reading, ages
6 - 10. In cardboard folder.

**Main Street Publishing

d Ardy the Aardvark Same game as above, repackaged in
ziplock.

**Penguin Software

d The Quest Fairly decent graphic adventure game

**Scholastic

d Agent USA Educational puzzle solving adventure
for ages 9 to adult. Nice, but heavy
packaging.

d Turtle Tracks LOGO-type graphics language program
for ages 9 to adults. Also nicely but
heavily packaged.

**Sirius

d Blade of Blackpool Illustrated myth and magic graphics
adventure game. Not bad.

d Fast Eddie Jumpman, Donkey Kong type arcade game.

d Wayout Colorful elaborate maze game. Still
has the CLOWN glasses !!

**Spinnaker (Heavy plastic box packaging...nice, but probably
expensive to mail !)

d Kinder Comp Collection of six educational games.
Boy, are your kids going to be smart !!

d Snooper Troops, Case #1 Kids detective game. Teaches problem
solving, deductive skills

d Snooper Troops, Case #2 Are your kids skilled yet? If not, try
this one too.

**Thorn EMI

d Home Financial Management If you buy all the above, this will
help tell you how much over budget you
are!!

**Walt Disney PC Software

d Mickey & the Great Outdoors If your kid can only learn from a
mouse, this is the one to do it.
More math and literacy skills.
By the way,
BOYCOTT DISNEY/ABC !!!

Cartridges

**Atari

c Centipede Zap the worm and all his parts. Arcade
game.

c E.T. Phone Home Help E.T. find the parts to make
his phone.

c Missile Command Save your cities from alien attack.

c Star Raiders Some more stupid spaceships!

**Imagic

c Atlantis Missile Command under water.

c Demon Attack Space Invaders with flapping wings.

**Spinnaker (once again, nice but heavy premium plastic packaging)

c Fraction Fever Shouldn't 98.6 be 98 3/5 ?

c Story Machine Kind of a "mad lib" for your kids.

**Thorn EMI (Once again, neat little BETA boxes)

c Kickback A soccer-like breakthru game.
Did I mention soccer is like unto
great gasping intakes of air!

c Jumbo Jet Pilot Take your seat at the controls of
a jumbo jet. Fly it upside down...
see passengers grab for Gravol...
mess up the President's $200 haircut..
console Bobby because they shot his
dog before boarding.... JUST KIDDING!

OK! I KNOW A SMALLER PERCENT OF OUR POPULATION IS LITERATE,
TEST SCORES HAVE FALLEN, WE'VE DROPPED TO 17TH IN EDUCATION...
SINCE THE ESTABLISHMENT OF THE DEPARTMENT OF EDUCATION and
CONTINUAL NEA 'STANDARDS'.
IT DOESN'T MEAN *YOU* CAN'T TRY READING!!!

If you need any further info, heck I don't have much to say.
Haven't played most of these more than once or twice, and
certainly not in the last 5 years!

If you have problems with any descriptions or comments, don't
blame me, I'm from Arkansas... oops, I lied... proving I'm from
Arkansas. I just spell it with different letters. Besides, P.J.
O'Rourke is the ONLY thing worth reading in 'Rolling Stone'....
and the most beautiful face on television belongs to Odalys Garcia
on 'Lente Loco'!!! So there!

Again, will likely not post again, unless someone shows interest.
This is not a newsgroup I normally spend time on, and peak activity is
well past. THANKS to all who have paricipated! ----and to those who
have reneged on deals... well, may you STILL NOT go the way of Jocelyn
Elders, Webster Hubbell, Arkansas troopers, Lannie Guinere(sp?),
Mina airport, a coupla hundred Haitian boat people, a score of
GI's dragged through Mogadishu, Les Aspen, Vince Foster, some retired
folks savings on land deals..... or whatever is our daily shame.

"tomorrow we shall discover what our God in Heaven has in store..."
---Les Miserables

...actually, I've had no problem running files from the H: device under AtariDOS 2.5... haven't tried it with any other DOS (the docs say the H: device is designed specifically for AtariDOS 2.5)

The PET didn't come with a speaker, but there was such a thing as "CB2"
sound, which was a "hardware hack" published in many magazines back
then. And yes, I have a Compute! magazine, circa '81, that has a program
& schematic to build a sampling device & sample from the cassette
recorder (or I guess any audio input) on the PET...

...all this ancient history... I miss those days.

3527. Looking for: Transmutter!

Newsgroup: comp.sys.atari.8bit

Someone identified my "best shooter" game as
Transmutter.. I'm not sure about that one yet
but that name really reminds me of something :)

Does anyone have that game or something?
I think Yogi doesn't have that yet, it kicked!

thanks, and later!

Hello ALL Atari 8-bit surfers on the WEB,

What is NEW on "Beco Tel" HomePage ?

Date Desc.

7 April 1997 - Changed Main index page to a hopefull better looking layout.
- Add a ATARI / Hardware page with some great pictures like,
BlackBox, 130XE, 800XL, XF551 and 1050 drive.
- Links page is changed to a other layout and NEW links are
added.

So if you liek to take a look to my HomePage go to :

http://www.becotel.demon.nl/

And please sign my Guestbook......

Gtx. Bernard Kok (Sysop of BECO TEL bbs)

GNU just happens to be a piblic liscence software organizaton. Free
software. While it is true that GNU Zip is the archiver of choice on
UNIX systems (maybe cuz' they haven't got too many choices), GNU Zip
is avaialable for many platforms, including but not limited to Messy
DOS & MAC. Often times files that have G-zipping applied also have
been TARed too. For those of you that may use a crappy windows PC
besides an Atari, I suggest Winzip from Nikomak Computing. It can do
PK style Zips and GNU zips. Plus untaring etc.

Cheers,

Jon

Hey folks...

You are all talking about error 136 with the H: device... I think that is VERY unusual and NOT the PROBLEM. If that's happening you have a larger problem (and not especially with XL-it!!!) Check out your PC harddisk.

NO I guess you a dealing with ERROR 146; that's another story. That IS actually a little communication failure between the ORIGINAL atari 8bit OS and the emulation of some hardware device of XL-it. I'm not sure it is possible to fix that easy (guess it IS possible; look at the APE-mirror function, it works great... but that is a very strange way of emulation.... the directories are not changed with the CD or CWD command.... but only to "load" a directory by typing its name and press return (and ofcourse with a dot at the end of the name...)

Error 146 : not existing function. The programm tries something like: WRITING to the KEYBOARD or READING from the PRINTER.

That kind of strange stuff. Also; ONLY use the H: device to COPY from to ATR images and WRITE to! Don't try to run files from it.
==========
==========

You must know it's very hard for the DOS (sparta/mydos etc) to handle the high capacity itself... it's programmed for those 16mb partitions (max) and you PC-users (1997) perhaps can't imagine, but running software from a H: device is in that CASE almost impossible. I think it might be interesting someone writes a special (NEW?!) atari DOS (perhaps in a XL-it .ROM file)... that IS able to run files from h:....

I'm almost sure it requiers a new dos for ATARI 8bit.

(BTW the FACT the name is H: is already VERY difficult for the OS...)

At last bot not least: I'm using the H: device with very much success:

I programm all my stuff in MAC65 by using XLIT (!!!). The compilation goes VERY VERY VERY fast. I compile to the H: device. Because of multitasking (ehh more taskswitching on Windows) I switch then to APE and that's configured with an MIRROR drive. I start on my REAL 8bit with sio2pc the file just compiled with XL-it. That is a great way of using the H: device with XLit, and I'm very happy with it.

Marius

> 130XE
> 400

I would agree with this ranking, though I have never used a 1200XL.
I prefer the feel of the 800, but I have a 130XE on my desk for its
(much) smaller size and increased memory.

>

All of my knowledge about light pens is second- or third-hand, but I
understand that the light pen works on the basis of precise timings
between the pen and the electron beam drawing on the screen.
Intelligent
programs allowed the user to calibrate the light gun to provide maximum
correlation, but dumb programs and games didn't. Atari's light gun
(it came with the XEGS) was really just a light pen. There are a couple
of memory locations from which you can read the light gun position
(horizontal and vertical), and the whole thing is automatic.

I also understand that a bright screen is more easily detected by the
light
pen, which makes sense if the pen merely senses the timing of the
passing of
the screen's electron beam at a particular point on the screen. Bug

hunt,
which used the light gun, made the screen flash whenever the trigger was
pressed
to increase accuracy. I guess it's up to the application to flash the
screen,
though. I don't think it happens automatically.

3540. Information for magazine article

Newsgroup: comp.sys.atari.8bit

I am writing an article for Electronic House Magazine regarding using older computers for home automation applications. The type of applications we are talking about include lighting control, HVAC control, security monitoring, even sprinkler monitoring.

If you have any information on using the Atari machines for these applications, or can point me in the right direction would be greatly appreciated. Or if you know of anyone using their machine for this purpose, I would be very grateful for that information as well.

Thank you for any help you can offer,

Thomas Havemeister wrote:
> [Stuff about dropping characters on modems and the at&k4
> modem command]

I looked in my modem manual, and the at&k4 command enables XON/XOFF flow control, which is a form of software flow control. As I understand it, when a XOFF is sent by the receiving end of a line, the sending end holds off sending for a little while to give the receiving end a chance to catch up. When the receiving end catches up, it can send a XON which tells the sending end to continue sending. Using this should reduce the liklihood of dropped characters. It's not as good as hardware (RTS/CTS -- check out the FC light on most high-speed external modems on fast transfers) flow control (enabled by default or the at&k3 command), but it's good enough for the Atari, which as I understand, doesn't normally allow hardware flow control, unless using such a device as the Black Box.

Leo,
That's easy, There are a few items that show how to do this type of thing, not to mention the commercially available adaptors that Radio Shack sells. I forget the name, but BSR came out with them about 15 years ago and there was an interface for it for the Atari 8-bit. Anyway, there are two kits for education that include an interface, some experiment hardware/software and manual. One if for light and the other is for temperature/weather. There was a great little book with software (gees I wish I could think this morning...) that showed how to build many types of interfaces for analog and digital input, and analog or digital output via the joystick port. I think it was called "Your Atari Comes Alive". These last three items are very educational and easy for beginners to do, yet useful for advanced project builders. They are(were) available from B&C Computervisions.

Ken,
If the BBS can run external DOS command files, this could be done with multiple MI/O saved
config files and MIOSAVE.COM and MIOREST.COM. An example would be A:>X MIOREST MIO-01.CFG,

which would load MIO-01.CGF configuration into the M/IO. (I think it was called MIOREST.COM, it might be MIOCGF.COM or MIOCONF.COM... I forget at the moment). I had a few different config files for different situations. This should work as long as you are not running an MI/O RAMdisk, as this would probably reset it and clear out everything in it. The nice thing is that this does work on the fly.

Try JACS at 609-346-1224. It's not an 8-bit, but it is an Atari (ST) and does support Atari 8-bit! JACS is the Jersey Atari Computer Society. The board has been up since 1982! It's located in South New Jersey.

Just a quick addition. If you are using a modem at 9600bps or faster, don't use xon/xoff, use the RTS/CTS. Since you can do this with the MI/O and BlackBox, use it for all it's worth. If you are on an 850 or P:R:Connection, you won't be able to deal with it and probably won't be going at or above 9600bps anyway.

Hi XL'ers!

I tried to load XL-it 0.20 from the site Markus gave us
here, but I could not get a connection, not even the name
was resolved. Is there a german/european site which offers
it for download? I feel it is time to upgrade my 0.16 ... :-)

Any other well reachable mirror would be fine too...

Thanks, Stefan.

Anyone remember an old demo, you'd use the joystick to move a cursor around, pressing the button would drop a box, and as it fell and bounced it would make noises. You could build a stack of boxes, and then (I think) delete the bottom box, and the rest would come bouncing down, making lots of interesting noises.

I think I got at the same time as a "3D Pong Demo" a 3D view looking down a cube with a bouncing ball. Actually there may have been two versions of this demo, one interactive, one not.

And are either of these available and workin for any emulators?

> Hopefully someone knows the answer to this.
>
> Sasha

...you are correct.. the Z flag will be cleared.. the point to this is that BNE is a relative jump. The programmer could have used JMP, but in order to generate relocatable code, no absolute jumps were used. He could just as easily have written SEC, BCS <wherever>, but as long as he knew the Z flag would be cleared there, might as well save a byte.

...I think...

3559. Atari 130XE mods

I'm compiling a list of modifications for the 130XE. Heres what I've
got:

```
Pokey Stereo Upgrade.....................C. Steinman.....12/16/89
The Ram-Disk LED Mod v1.0................Guy Ferrante....1994
Internal Speaker.........................???.............???
The Freezer--cold boot & protect ram-disk...Bob Woolley.....???
Dummy Cartridge..........................???.............???
Atari OS Switch..........................Dave Paterson...???
576K upgrade.............................Dave Paterson...???
1088K upgrade............................Dave Paterson...4/86
Newell 256k mod..........................???.............???
```

have I missed any? If anybody has any more or knows any URLs that have
some that I don't have, PLEASE let me know. Also, if I decide to try
to cram all of this into a 130XE, does anyone forsee any problems?

Thanks,
Chuck "$29.95" Sumner

No. Ballblaster was a pre-release beta version of Ballblazer. I don't think it was supposed to go out of the hands of the testers but virtually every Atarian in the world has it.. Anyways, Ballblazer is better. There is more variation in how good the computer is and there are some neat graphical effects that aren't in Ballblaster.

Micheal,

You info about the Candy/Colleen release is correct, at the 1978 CES the 400/800 were shown along with DOS 1.0 which is HORRIBLE (I'm fortunate enough to have a copy) OSS was signed on to do DOS 2.0

One interesting note: the life & death of the 850. Did you know the 850 was cancelled over a 1/2 dozen times and restarted again. Never at anytime was an XL shell ever designed for it and the original 850's were in black steel cases.

Just a note of interesting history.

Sadly, I forgot most of it. Killing the dragon involved using the correct colored crystal to shoot it. The last dragon in the game had one head of each color and took quite a long time to kill. Don't expect too much from the ending, though. :)

Killing the creatures must be done by using the right crystal, too, I think... I can't get Eidolon to work on XL-it. The archive I got from Yogi's just hangs in a loop at

```
1056: LDA $80
1058: CMP #$01
105a: BNE $1056
105c: RTS
```

This is with the Lucasfilm logo still on screen. Oh... I just put a zero in $80 and it worked. Hmmmm.

The Eidolon works fine. Maybe you haven't waited long enough. It
takes a bit longer than usual (because of direct SIO-access) until
the game starts.
The loop that you qouted waits until an interupt-controlled loader
has finished it's work. Maybe you just put 0 there as it was
nearly finished.

Bye,
Markus

Source record: 73803

Greetings all,

Picked up an unfamiliar device. It's an Atari 850. It has a jack for a power supply (any idea what type?) and a red power light and then a power switch on the front, as well as two I/O ports. The right side has a parallel interface and the left side of the unit looks like it could have a port, but is solid plastic. The back has 4 serial interfaces labelled 1-4.

I am familiar with the 800XL and 1050 and its stuff, but this looks to be the color of the Atari 800 casing, and I've no idea what it does.
Can anyone help?

Thanks!

: ...my favorite Atari DOS was Sparta 3.2d (I never had an X-cart though,
: I would have liked that better..)

Same here. I loved that DOS, and still do. It was the first intro I had to the command line interface. I only wish that the ATR versions, not from FTE, would work fine, unless I've missed something.

: ...unless I was using Turbo BASIC, which didn't work with Sparta. Then I
: would use SmartDOS 8.5 (or was it 5.8?) or SuperDOS (the only one I ever
: found that would run in 1050 US Doubler high-speed mode besides Sparta)

AtariWriter XE was a word processor I used often, and transferred it to a Sparta-formatted disk. It's still working today. I never used T-BASIC, though I did use Basic-XE, and regular BASIC. When DOS 4.0 first came out, and made a copy of a friend's copy, and played with it. It was formatted an hour later, since it wasn't even compatible with the other DOSes, not even reading them.

I had the same problem once. I had this game for the Apple II in the
mid-80s (I had already sold my 1200XL and bought an Apple IIe--but when I
got nostalgic in later years, guess where I returned?) and I had the
same experiences.

I didn't even know there *was* an Atari version. I'd like to find it
again, assuming anyone could tell me what to do about that stoopid
dragon.

I thought i had the instructison manual lying around, but I couldn't find it so here's what I can remember and just from playing aroudn with the game now.

The goal of the game is to explore the caverns and collect three diamonds (the ones you have already will be displayed in the lower left corner of your dashboard), once you have those three diamonds you go to the end of the maze and you have to kill the dragon, when you kill the dragon you go to the next level. (Acutally, you don't HAVE to have all three crystals to get to the dragon, just now I managed to get to him with only the red and green ones. But I remember there was somethng in the manual about the reasons for having all of the crystals....) If you don't have the right crystal, when you get close to the dragon, a force field blocks you.

The cavern is a big maze with little creatures, crystals, and fireballs floating around (more on the fireballs later).

The dashboard. In the centre of your instrument panel is a clock looking thing which serves as a compass (teh arrows for N,S,E,W just outside the outer diametre, the corresponding one blinks depending on which direction you're facing), but you'll notice that it counts down.......it's a time limit, but I think that if the time runs out before you can fiinsih the level, you don't die, you just don't get bonus points at the end. I think. You can see four round circles filled with red, yellow, green, and blue around the timer. One of them will be blinking. The blinking one is the colour and type of fireball that you will shoot when you press the fire button on the joystick. By pressing the number keys 1, 2, 3, or 4 on the keyboard, you select the type of fireball you want to shoot. The fireballs have different properties when you collect them (they can be found floating around in the caverns) and different effects when they hit the differenet creatures you meet.

Pressing 1 selects the red fireball
2 selects the gold (yellow) fireball
3 selects the green fireball
4 selects the blue fireball

Any fireball cuases damage when it hits you (it can hit you if you fire and it misses your target and it bounces off the cavern walls, or if it's already flying and bouncing around), but if it's just floating there and you move your vehicle into it, you go right under it and don't take damage. I think you take the most damage from the blue fireball, then the green, then the yellow, then the red.

The red fireball causes damage to your enemy when you hit him with it, and gives you energy (I think) when you collect it.
Not sure what the yellow one does right now, I think it also just cuases damage to your enemy, but gives you energy when you collect it......
The green fireball, when it hits your enemy, transforms it into a different enemy (which could be good or bad). Not sure what it does when you collect it.
The blue fireball, when you hit your enemy with it, causes him to freeze temporarily (which is good in a fight cos you can use other fireballs on him when he's frozen, but firing a blue fireball uses up a lot of energy). When you collect a blue fireball, it freezes the countdown of the timer temprorarily.

Each fireball you shoot takes away a bit of your energy, the blue and green ones more than the yellow and gold ones, that's why if your energy (gauge on the upper right hand corner of dashboard) is low, some of the fireball indicator lights are blacked out, which means you don't have enough energy to generate those fireballs.

Keep in mind that these different effects don't work on the big dragon (in other words, if you shoot a green fireball, it doesn't turn the big dragon into a little bug), with the big dragon, you have to find the right combination of coloured fireballs to defeat him, and the big dragon on each level is different. I say 'big dragon' cos there's also a little dragon who is a regular enemy (like the troll or dragonfly) that you come across exploring the caverns.

One thing that's sort of confusing with the fireballs is that you _don't_ need to pick up a fireball of a certain colour before shooting it. Your vehicle can genreate any coloured fireball, as long as you have enough energy (generating a blue fireball takes up about 40-50% of your total energy, I guess because it's has a pretty pwoerful effect on the enemies). Collecting the fireballs just restores some energy and has some other effects on you. You can collect a fireball that is moving and bouncing off the walls, but it's tricky cos you have to manoeuvre your vehicle so that the big diamond outline appears (explained below).

When you come across an enemy, it is usually like asleep or something (grey colour), but when you move closer to it, it wakes up and starts attacking you. Except with hte big dragon, you need the right crystal to get through the force field to wake him up, that's why you can't just start off the level and go immediately to where the big dragon is and finish the level just like that.

Like I said, the lower left of the control panel shows you which of the three crystals you have. Rigth above that is like a temp gauge from C to H, this tells you how close you are to the dragon (and the end of that level). H stands for hot (you're close), and C stands for cold (you're far away). On the upper right hand corner of the instrument panel there's another meter that goes from - to +, that is how much energy (and thus life) you have.....when it goes down to -, you die if you take further damage (from an enemuy.....you can't shoot with no energy, it just makes a clicking sound) and you start the level over.

There are also two numbers on the lower right hand corner, I don't know what the left one is, but the right one is the level you're on.

When you approach a fireball or crystal (fireballs tend to be floating high up in the air, whereas crystals tend to be sitting there on the ground) and it's centred on your viewport, you see this big diamond outline surrounding the fireball/crystal, that means that if you press the space bar, it collects that item. As i mentioned bbefore, you can do this with moving fireballs (apparently not the red ones, however), but it's very tricky.

Pressing P pauses the game.

Sorry this was so hard to read, i was just typing what I could remember and from playihng around with the Eidolon on my 8-bit as I was typing. If I find the instruction manual, I'll type it up and post it.

> Chuck "$29.95" Sumner

Thanks for the compliment, but I never did the RAM upgrades; I beleive
those were Scott Peterson. And I ripped off the OS Switch from an old
Antic. Check out the URL below for the hardware add-on and modification
FAQ; there's lots of wild, Woolley and wonderful stuff out there.

You left out Super Video (Atari Classics 2/5). As well, you may have to
look at a new power supply.

: I'm looking for some clarification on some points presently mentioned in the
: FAQ.
<snip>

: When did machines first start shipping with GTIA installed? I now believe the
: 400/800 began shipping with the GTIA toward the second half of 1982, about the
: same time the 1200XL appeared (also with GTIA). Is this right? Does anyone
: know otherwise? Which came first, 400/800's with GTIA or the 1200XL?

I got my Atari 400 in September 1982 and it did indeed have the GTIA chip
in it. The Atari 1200XL showed up shortly after (a few months).....so,
according to my memory, the 400/800 with GTIA's came before the 1200XL.

Don't Fear's Huge Second Auction (Update 19)

Part 1: 2600/5200/7800

Notice there are some new items!

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

Don't Fear's Huge Second Auction (Update 19)

Part 2: Everything Else

Notice there are a few new items!

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

That `s Transmutter by the sound of it, great game really addictive
weapon power-ups etc. but the cavern bits were bloody hard.

-

Uhh.... they should work the same.....
Look at the first 2 bytes of the file, are they FF FF?
If so, just binary load it. If its a newer game, you might have to use
XE emulation on xlit.

Hello all,

A long while back I made up an 8bit page and requested
manuals and easter eggs, etc... i got less than an enthusastic
response...

Since I am almost done with college for this semester I
thought I would try again... I want to set up my 8bit page(s)
again and offer a database of program reviews, manuals, cheats,
easter eggs, and FTP links to/for 8bit software.

If you are interested e-mail me at blackat@direct.ca or
simply post messages here as I am always here or in c.e.m

-Will

It lets you connect up to 4 serial devices and one parallel device through
the "disk" port connector on the Atari 800 series. Wayne

It gives you four serial ports and a parallel port, although ports 3 and 4 are very seldom used, and the pinouts are not "standard" (there was no standard for 9-pin serial ports when the 850 was introduced, before the IBM AT computer). You can get serial and parallel cables from B&C or other vendors, or one of the FAQs or web pages should have information to make your own cables. The power supply is the same 9 volts AC used by the 400, 800, 810, 1050, etc.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 800XE, 65XE, 130XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

though,
->I would have liked that better..)
->
->...unless I was using Turbo BASIC, which didn't work with Sparta.
Then I
->would use SmartDOS 8.5 (or was it 5.8?) or SuperDOS (the only one I
ever
->found that would run in 1050 US Doubler high-speed mode besides
Sparta)
->
->...and for games, Fenders 3-sector loader...

I have a small patch, which when placed as an AUTORUN.SYS file on any DOS disk, enables the US Doubled High Speed. It is actually a boot disk that I converted into a DOS file that I got with my Duplicator Clone 1050 drive software. Of course I havent actually tested it with EVERY DOS, but I would assume that any standard Atari DOS (2.0, 2.5 etc) would run just fine. The only DOS I'm sure it won't run with is SpartaDOS, but that already has High Speed IO anyway...
Not much help for XLit tho, I know... but for REAL Atarian's- MyDOS never worked so fast even on 16mb Double Density images! It also works great with SIO2PC, and APE loves it too..... I hope to have it soon on my home page, but if anyone wants I can email it to you....

I wanna
->upload Ballblazer (full intro) bu can't.....

Transdisk!! If you want to email it to me, I should be able to convert it to a DOS Binary file. Some time ago I wrote a program specifically to convert TRANSDISK format to DOS format. BUT, because any games that are in TRANSDISK format usually have multiple parts, I would have to manually go through each part and adjust it accordingly. Anyway, it should boot using the TRANSDISK Menu loader (have you tried it yet?), but if it won't boot then it HAS to be converted to DOS format run. BTW, for anyone who hasn't heard of it, TRANSDISK is for running BOOT TAPES from a DISK DRIVE. It copies all the parts it finds of a specific tape game to a DOS file, but like TURBO BASIC COMPILED programs, it requires a "Loader Menu". To load these "tape files" the loader sets up the operating system to read a DOS file as a CASSETTE LOAD. Of course this requires modifying the OS, so it won't run on 400/800 computers. If anyone has the actual software to make TRANSDISK files, please let me know..... I have been after this for quite some time.

I think this may be inaccurate (no big deal) but I don't believe a
working 810 existed at the first showing. I believe it was only shown
as a shell, all software was on cartridge.

Since I was not involved in any shows at the time I can't say for
certain. But if memory serves me correct a working disk drive was not
availible until spring of 79.

As always..... my 2 cents

3590. How to use *.ATR files?

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-13 00:00:00 UTC
From: pnguyen@ucla.edu
Message-ID: <5ir4iq$d8i@uni.library.ucla.edu>
Source record: 73731

Hi, I'm using XLIT020 and I'm trying to use these ATR files I downloaded off of Yogi's site but none of them work. You set up the ATR file in D1 and leave the other slots blank, right?

I want Hardball on my PC! Karateka! etc.

Otherwise, I need to find a monitor cable for my 1200XL. The output through the switchbox is horrible. Some combination of colors or higher resolutions cause the screen to bend and stretch at certain areas. The interference is noticeable.

3591. megaimage help

is there any other sites that have megaimages.atr apart from jellystone, as
I find that one incredibly slow..

yours
margaret
p.s. I have rescue on fracs working but the keys dont seam to work i.e...
power on/off etc..
any help on that toooo...

3592. Kai's Rude Quantites Closet Clearance, New upd.

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-13 00:00:00 UTC
From: kickass@users.jaxnet.com
Message-ID: <5irdq3$jo@news.southeast.net>
Source record: 73733

I've been collecting massive quantities of carts for quite a while now, and my women will no longer allow me to fill the closets to bursting, so I have to clear out all my extras or clear out myself!

I don't want to get rid of my collection like this, but it seems as though I have no choice. I hope these go somewhere where they can be enjoyed. Long live the classics.

I would like to do this as one BIG auction of the whole lot...

These are all loose carts. They were all tested when I first aquired them, but have not been tested since. This is all as is. I have many references of people who I have dealt with if you have any questions (jerry g, dan mowczan, many others, the guy who puts a fat squirrel on all of his stationary (grin) etc.)

The winner has the option of donating his Pac Man carts to rufbo (I think that's his handle (or ruffin) the guy trying to get to 2000 pac man carts.) The winner pays shipping, of course.

Auction rules:
Everything is up to me.

This is for 2600 & Colecovision carts.

Coleco:
Colecovision.

You mean someone actually managed to crack that game? That had to be the hardest game to copy I ever had, as it required a happy drive and modifications to the RPM to get it... however, my copy died from bit rot, and i'd love to get a copy of it, especially if its unprotected! Is it available at yogi's site? I haven't visisted that site for months.

...yeah, I had atariDOS 4.0, kept it as a curiosity... Also had DOS 3.0
(the one that shipped with the first 1050's), but upgraded to 2.5 as
soon as it came out...

Never did get to play with Basic XL/XE much... but Turbo was great..
found it on the Web in ATR format and it works fine with XL-It...

Yep it is Transmutter, THANKS for the info, now I remember :)

I spend like hours a day playing that one, and finished it.
Well not really finished but went around the levels and
started back at the first one, heheh.. Really cool game..

You wouldn't have an ATR image or EXE of the game, would you?

thanks..
bye!

OK thanks,, yeah I got it to work...
I had problems because I was using Lynx to d/l the file
and it was corrupting it, FTP binary works all the time :)

But anyways,, is there a difference between a .com and .exe
(just like in ms-dos) or are they the same thing pretty much?

thanks.

Uh. I thougth the Atari 8bit version of Ballblazer, Koronis Rift, Rescue on Fractalus were the best versions out there. The 7800 Ballblazer was just as good as the 8-bit version also. I think that the C64 versions were a joke, tho.

On April 9, Janice in NYC wondered if anyone had noticed that the control detents on a C= 1702 monitor seem to be WAY off. Well, I have a 1701 on my 130XE and the answer is yes...and no. It seems to depend on the particular software I'm running. With a colorful display, yes. - but with a text application like Bobterm, no - at least with the background/text color combination I use.

I use mostly split video, but have found one condition where it's actually better to use composite. When a program uses artifacting to acheive color (Hi-res games, mostly), the colors are much more vivid with composite. Also, the split video artifacts seem to be 1/2 color clock or so from that of composite, so the colors are wrong, to boot.

Wayout and Capture the Flag were both done by the same people. I remember hearing or reading about Capture the Flag, but never played until recently. I was really hooked on Wayout for a short time way back. It had 26 mazes of increasing difficulty which you had to find your "way out" of (get it?). An annoying character called a Kleptangle would periodically steal your map or compass. You would either try to retreive them by cornering the Kleptangle or try to do without, neither of which was easy. After a while I was able to find my way around fairly well using only the visual cues provided in the 3d view. There was also "wind" blowing in from the exit sometimes which made it hard to get out even when you did find the exit. I think both games were also done for the Apple II, possibly earlier, and (I think) used wireframe graphics and 3d glasses.

The 850 is the original port device for at 8bt computers. It has 1
parallel port and 4 serial ports of varying degrees of functionality.
only the first port is standard rs232, the others are missing various
outputs.

does have a collection on floppy. Mike, if you're listening, see what you
could do about posting them to Bill Kendrick to be placed at the Unich
Archive. Bill is at kendrick@zippy.sonoma.edu.
>

I'm listening, or lurking.. Made some progress.. I found the 5" disk they
were on. Now to connect the modem to the 8 bit again.

One problem with viewing the files themselves occured to me. Back In The
Day, 2400 baud was max You could see the atascii animation at a smooth
pace. Reading it with a high speed modem, or straight from disk, it would
be too fast. It would appear like a blur. The only way of viewing them
would be to log on a bbs at a certain speed (like 2400) and read the files
directly, or through some kind of program that reads them from disk at a
certain speed. (slow).

What was the name of the word processor that I used to make these atascii
movies? It looked an acted like a text editor, but it would record all of
the backspaces, arrow keys, control keys, etc. When you really wanted to
backspace, like if you entered something by mistake, it would redraw the
entire document and eliminate that last character.

Yes. You need different coloured crystals to kill each dragon. I think it's Blue for the first some and then red for the second, but I'm not sure. I know the one on leven 8 (?) needed all fout colours, then you faught the space dragon.

3605. Disk based software for sale/

I have the following tapes for sale:

Target Practice ----Gentry
Moon Shuttle-------Datasoft
Blue Max------------Synapse
Zaxxon---------------Datasoft....this is a great one. I wish someone would
port it to the pc
Into to Graphics-----Atari
Writing Programs One--Atari
Writing Programs Two-Atari

Darts-----------Thorn EMI
Cribbage and Dominoes--Thorn EMI
pool--------------------------Thorn EMI

Atari Speed Reading--5 cassettes

Stratos---Adventure International--includes Rear Guard

Because these are tapes and I haven't used the cassette "drive" in quite a
while, I have no idea if they work...they all did the last time I used
them. As a Collector item in a display..they're great.

I will sell all these for-------$30.00

soumis@ix.netcom.com

3608. For Sale...Disk software

I have the following Atari disk software for sale:

Summer Games------------EPYX
Maniac Miner---------------Gentry
Zeppelin----------------------Synapse
Dimension X----------------Synapse
Shadow World-------------Synapse
Genesis-----------------------Datasoft
Caverns of Mars-----------Atari
O'Riley's Mine--------------Datasoft
The Cranston Manor Adventure---Artworx
Spider-Man------------Green Valley Publishing
The Sands of Egypt-----Datasoft
Survivor-------------------Synapse
Fantastic Four------------Green Valley Publishing
Bruce Lee-----------------Datasoft
Rescue on Fractalus-------Lucafilms....they were great even back then
Koronis Rift---------------Lucasfilm
Mickey in the Great Outdoors(Mickey goes Hiking)--Disney

Temple of Apshai----------EPYX
Curse of Ra----------------EPYX
Sargon III-------------------Hayden Software

ZORK I------Infocom----highest bidder gets this one!!!!!
Deadline------Infocom

Again, I can't vouch if these work or not. They all worked the last time
they were used. They've been away from magnetic fields. The best bet would
be to offer on the whole bunch.

I have some other stuff as well that I will throw in, and I also have some
other disk based games somewhere...now where did I put that box???

3611. 800 system and stuff for sale

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-13 00:00:00 UTC
From: "David A. Soumis" <soumis@ix.netcom.com>
Message-ID: <01bc47c1$90046a80$98f31fcc@default>
Source record: 73821

Ok..this is what I have the high offer is $150. I originally tried to sell
all my stuff as a big bundle, but there were too many offers for individual
things that I had to split it up.
ALL THE BELOW WILL BE SOLD AS A UNIT(the fine print)>>unless someone makes
an offer that can't be refused on a specific item :) HOWEVER, I don't want
to break up what is necessary to keep this a complete useable system.

I will also throw in whatever software I have left when the system sells.

Amdek Color Monitor+
810 disk drive (2)
410 tape drive (2)
1030 modem
800 computer..working and 1 for parts
operating system rom cart (2)..1 seems a little flaky
16k Ram module (5)..1 in machine
10k Ram module
32k Ramcram by Axlon in machine
numeric keypad
paddle set
numerous joysticks..atari, kraft, and a couple others.bunches of sticks
that need repair

there's also a Star/Gemini dot matrix printer and printer interface.

The necessary operating manuals for the stuff800/810/410/1030 user
guides/Basic cartridge&manual..cabling, etc.

I also posted some other stuff for sale..check it out.

If you're still interested, I would like to be paid by money order, COD via
UPS..so send your shipping address and whatever other info is pertinent.

Thanks
Dave.

Ps the system was working great when I used it last..about 8 months ago. I
think one of the tape drives is malfunctioning, may need head cleaning I
havent used them for a long time disks work much better.

Don't Fear's Huge Second Auction (Update 20)

Part 1: 2600/5200/7800

Notice there are some new items!

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

Don't Fear's Huge Second Auction (Update 20)

Part 2: Everything Else

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

: add too much to the retail price of the unit......

Atari did not design the Maria chip, which is the main graphics chip in
the 7800. They bought it from a 3rd party who engineered it to have a
2600 compatible mode.

If my memory serves me right, the Atari 850 was a RS232 serial emulator (or something like that). You connect it through the 4th joy-stick port in the front of your 8 bit Atari computer. You can connect up to 4 serial devices. I'm not too sure about the parallel interface.

Jeff Klug

: ...yeah, I had atariDOS 4.0, kept it as a curiosity... Also had DOS 3.0
: (the one that shipped with the first 1050's), but upgraded to 2.5 as
: soon as it came out...

I remember 3.0, though never used it much. There were a few other variations of 2.0 and 2.5. How about SmartDOS? I used that quite a bit so I could format in double density, as well as MyDOS. There were more than one versions of MyDOS that I have, and still do have.

: Never did get to play with Basic XL/XE much... but Turbo was great..
: found it on the Web in ATR format and it works fine with XL-It...

Something to play with, this Turbo Basic. I located also a copy of the Atari version of Microsoft Basic, which was a slight variant of TRS-80 Basic, which I first programmed in. It had that weird defdbl and other kind of commands, that I only saw in the TRS-80 computers and a few other older 8bit systems.

I was talking earlier with someone about the TRS-80s, and an *OLD* game that was one of my favorites, called Empire. I located it through a link in Node 99, and located the file. I got everything else, so all I gotta do is install and play it again. Jeez... Last time I played it was *WAY* back in 1984. Brings back a junkload of memories of these classics. But of course, I have a place for the 8bits as well.

Well, you'd have to find an outdial. Remember PC-Pursuit? Well outdials work similarly to that. You telnet onto the outdial's server and it allows you to make local outgoing calls in that area code... There aren't too many, but if you can find some good ones, you can connect to virtually any bbs in the country.

I think there's a FAQ that has a list of some outdials somewhere...

>Jeff Klug
>skyklug@inav.net

Well, actually, the 850 hooks on the standard serial bus just like
disk drives and the 4xx cassette drives. It has (or mine has) 4
serial ports and a parallel port. The serial ports are each different
(different numbers of control lines, etc.) so port 1 is useful, 2 less
so, etc. As someone mentioned, the pinout is not the standard
PC 9-pin pinout, but I have a manual, so if you need it, I can dig
up the details.

You hit it on the nose -- I did this a lot in MYDOS and in the
Fastchip code. The missing unconditional relative branch made
a lot of code less clear.

>
>--
Track doubling problem, perhaps? Some disks that read fine on a 40 track drive would not be readable on an 80 track drive.

Another issue is the double sided one. When I wrote the Atari disk emulation code for the ATR8000, there were no (easily available) double sided drives for the Atari 8-bitters, so I make the drive work as compatibly as possible with single sided drives. Data was written on side 0 from track 0 to 39 and then back from track 39 to 0 on side 1.

But I botched it -- so the early systems only used 79 tracks, from 38 to 0 on the back side. So there may be an issue there if the disk is really using both sides.

And of course the newer double sided drives used the faster technique of writing to both sides before stepping to the next track, so such disks are completely alien to the ATR8000.

>Also, the split video artifacts seem to be 1/2 color clock or so from that
>of composite, so the colors are wrong, to boot.

I use split video on my 1702 as well. I recently picked up the Tower Toppler cart and it plays in black and white on my system. I sent it back and had them replace it, but they said it played fine on their system. So they sent me another and it also plays in black and white.

The cable I use for split video has 4 RCA jacks coming off of it. Is the 4th jack composite video? I've never tried hooking it up to the composite jacks in front (but will tonight!).

3627. Ballblazer & Ballblaster

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-14 00:00:00 UTC
From: Keatah <Keatah@worldnet.att.net>
Message-ID: <3352CE25.5DCE@worldnet.att.net>
Source record: 73758

I found (and verified) both my copies.. BallBlaster and BallBlazer. The title screen text / graphic is different for each version.

I can run both on xl-it 0.20 with no problems and no funny shit. I just use the options like this: Atari -oldmode -nobasic -file gamedisk.atr. So if you're having any problems, you probably have a corrupt image or something else screwed.

And 2 player mode works perfectly. I use a joystick for one player, and the keyboard for the other player. You have to use the F6 key to swap joyports, sort of. Use the number keys to change options and such. I guess "0" means 2 players. and either 5 or 6 makes the system play against itself. Well play with those number keys across the top of your keyboard and see what you come up with.

Keith

BTW: This is definitely ona' the better classic games, don't you think? And thanks to Julian for the bit of history, that was a choice posting!

3628. Ballblazer keys

Newsgroup: comp.sys.atari.8bit

I found that the following keys do something in ballblazer..

1-4 difficulty for rotofoil computer opponent 1
5-8 difficulty for rotofoil computer opponent 2
9 and/or 0 , computer does not play.
f5 or f6 swap joysticks/keypad so 2 people can play on xl-it.

BTW, are there any 'official' docs for this game ??

Keith

I believe that on an Atari, they are identical in format as that is
a format that DOS expects. On ms-dos, they are different, but I think
the main difference is that a .com file can't be larger than 64k.
(either the small or medium memory model, i think)

They are the same thing. On the 8 bit you can name the files whatever
you like, all the matters is that its in the right format. It will try
to binary load text files..... if you tell it to. (Of course, they
wont do jack)

A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said youu could make thousands of dollars within weekswith only an initial investment of $5.00! So I thought ,"Yeah, right, this must be a scam", like most of us, but I was curious, like most of us, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and address staetd in the article. You then place your own name and adderss in the bottom of the list at #5, and post the article in at least 200 mewsgroups.(There are thousands) No catch, that was it.

So after thinking it over, and talking to a few people first, I thought about trying it. I figured what have I got to lose except 5 stamps and $5.00, right?

Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161)and they confirmed that it is indeed legal!

Than I invested the measly $5.00.....

Well GUESS WHAT!!... with in 7 days, I started getting money in the mail! I was shocked! I still figured it end soon, and didn't give it another thought. But the money just coming in. In my first week, I made about $20.00 to $30.00 dollars. By the end of the second week I had a mad total of over $1,000.00!!!!!! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still comming in .....

It's certainly worth $5.00, and 5 stamps, I spent more than that on the lottery!!

Let me tell you how this works and most importantly, Why it works....

also, make sure you print a cpoy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pices of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 5 envelopes andd seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PREFECTLY LEGAL!

Mail the 5 envelpoes to the following addresses:

#1 Steven Roper

86 Finch Roper

Ball Ground, GA 30107

#2 Michael Henry

518 West College Ave.

Salisbury, MD 21801

#3 Kent

27 Vicar Road

Anfield

Liverpool

L6 0BW

England

U.K.

#4 David West

6020 Danube Way

Orlando, FL 32807

#5 Karine Ng F
P.O.Box 14066
Minneapolis
MN 55414

USA

STEP 2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS,

1) Click on any newsgroup, like normal. Then click on "To News', which is in the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, somethig to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with exception of your few changes. (remember to add your name to number 5 and move the rest up)

4) When your done typing in the WHOLE letter, click on 'FILE' above the send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTILL YOU SAVE IT. (so you don't have to type this 200 times :-)

5) Now that youu have saved the letter, go ahead and send your first cpoy! (click the 'SEND' button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and click the 'TO NEWS'button again. Type in your flashy subject in the 'SUBJECT BOX', then go to the message and place your cursor here. Now click on 'ATTACHMENT" which is right below the 'SUBJECT BOX'. Click on attach file then find your letter wherever you saved it. Click once on your file then click 'OPEN' then click 'OK'. If you did this right , you should see your filename in the 'ATTACHMENT BOX' and it will be shaded.

NOW POST AWAY!!

IF YOU'RE USING INTERNET EXPLORER:

It's just as easy, holding down the left mouse button, highlight this entire article, then press the 'CTRL' key and 'C' key at the same time to cpoy this article. Then print the article for your records to have the names of those you will be sending $1.00 to.

NEXT

Go to the newsgroups and press 'POST AN ARTICLE' type in your flashy subject and click the large window below. Press 'CTRL' and 'V' and the article will appear in the message window. **BE SURE TO MAKE YOUUR ADDRESS CHANGES TO THE 5 NAMES.** Now re-highlight the article and re-cpoy it so you have rhe changes.... then all you have to do for each newsgroup is 'CTRL' and 'V' and press 'POST' . It's that easy!!

THAT'S IT! All you have to do is jump to differnt newsgroupes and post away, after you get the hang of it , it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200**

That's it! You will begin reciving money from around the world within day's! You may eventually wany to rent a P.O.Box due to the large amount of mail you receive. If you wish to stay anonymous, you con invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now the WHY part:

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to eachh of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM postswith my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200with my name at #2 and only receive 5 replies each,

I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With a original investment of only $5.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $5.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people whoare joining the internet and newsgroups everday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure youu print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remenber, HONESTY IS THE BEST POLICY. Youu don't need to cheat the basic idea to make the money!! GOOD LUCK to all and please play fairly and reap the huge rewards from this, whick is tons of extea CASH. **By the way, if you try to deceive people by posting the messages with youe name in the list and not

sending the money to the rest of the people already on the list, you will NOT get as much. Someone Ii talked toknew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world with costing anything but our time!!! YOu also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again...

Why not?? ?? I don't think my copies HAVE a menu to use. I've never seen a menu on any 8-bit versions. Damn, now I need to look around for another copy :-)

Keith

Not bloody likely. Every time I find an outdial FAQ, it's the same one I
saw in 1994, and even then none of them worked. I bet NONE of them work
now.

I did find one that worked and I did call a BBS with it, but I couldn't
get through since then.

Why not use the Option and Select buttons to select that via the menu?

Bye,
Thomas

3642. Printer for 800XL?

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-15 00:00:00 UTC
From: Robert Fadrowski <robert88@earthlink.net>
Message-ID: <3354170F.3D54@earthlink.net>
Source record: 73685

I have a Xetec printer interface connection from my 800xl to my
daisy-wheel printer. I want to replace my old daisy wheel printer.
Will the Xetec printer interface work with an
Ink-jet printer from Hewlett Packard or Epsom?
Or would I have to get another printer interface to make the
connection to an ink-jet printer?
thanks
bob

```
The Swedish Atari Club (SAK) 970104
and NoCrew proudly present...

-------------------------------------------
T H E N O R D I C A T A R I S H O W '97
-------------------------------------------
```

Dear Atari friends,

It's once again time for the Nordic Atari Show, the annual get together which has rapidly become a fixture for all Atari users.

Third time lucky, so they say, and as we are arrange the show for the third straight year we hope to fulfill everyone's expectations and that this will result in the best possible atmosphere. We've gotten a certain amount of criticism, both positive and negative, from those who have attended the shows in '95 and '96. We've taken heed of the suggestions made and we're once again off and running!

- WHEN AND WHERE?

This year the show will begin on Friday, June 13 and end on Sunday, June 15. This is the weekend following the beginning of the summer school holidays as well as the weekend prior to the Swedish Midsummer celebrations. We'll open at 1 p.m. on the Friday and close at 6 p.m. on the Sunday.

The show will take place in Gothenburg, just has it has in previous years. The exact venue has not yet been established. We're still looking for the cheapest location. The likeliest possibility is Kortedala gymnasium, where it was held last year or some other venue, nearby.

- WHAT ACTIVITIES WILL BE HELD?

* There will be an Exhibition Hall will dealers, distributors, ShareWare programmers and a host of other interesting personalities. The usual meeting place for all those not wanting to "hack". This is also where the Swedish Atari Club will be found supplying information, sale of PD-disks, the club magazine's TT, the BBS, etc. We'll also have an area reserved for a swap meet where you can buy, swap or sell single copies of Atari related material and a "soldering corner" for those of you wishing simple repairs done.

* A "Hacker Hall" where demo and other programmers can gather for competitions and swap demos and all kinds of code. NoCrew is the Swedish demo group who will see to it that everybody takes part and enjoys themselves. Those of you hungry after rewards in the form of

prizes will be well taken care of. Exactly WHAT prizes these will be hasn't been established, as yet.

* Seminars with a number of well-informed lecturers. Last years seminars were very much appreciated, something of which we naturally have taken notice. The seminars will cover a variety of subjects (i.e. MIDI ercording/editing, DTP, hardware, programming) where the above mentioned "well-informed lecturers" will demonstrate his subject directly on a computer in order to provide the audience with practical examples. We'll also hold the seminars on different days and at varying times so that you won't have to miss the chance if you don't attend on a particular day.

* Minor competitions such as "A-Z on the Keyboard" (a much appreciated contest last year), hard disk throwing (this year we WILL succeed!), network games, juggling, etc. Everything depends on our finding volunteers to act as game leaders and judges. There will be prizes for the winners.

* A refreshment stand will sell non-alcoholic drinks, sweets, chips, etc. We may be able to arrange quantity discounts at the local pizzeria as well as other bonuses.

- WHAT WILL IT COST?

If you intend to attend all three days, you cheapest solution is the Three Day Pass otherwise a Single Entry ticket will do:

* Three Day Pass ... SEK 100:- (about UKP 8.50)
* Single Entry ..... SEK 50:-

These prices include full access to all the activities being held during NAS97.

- WHY SHOULD I ATTEND NAS?

The answer is simple: because you care about the TOS platform. We Atari owners are becoming fewer and fewer and a get-together like NAS is a simple way of seeing what's happening in the Atari world (no, it's not dead!) and meeting like-minded Atarians and hearing what kind of tips, ideas and visions they have.

- HOW CAN I FIND OUT MORE?

Information will be distributed regularly in the same way as this text file. In addition, we have a number of other sources of information where you can find out more about the show depending on your own resources.

* Our mailing list (E-mail). This will provide the very latest information to those on the list. To have yourself put on the list you MUST have an E-mail address. Send us a message on "nas-users-request@tripnet.se" with "subscribe nas-users" in the body of the text. Don't forget to include your E-mail address.

* Our home page on the World Wide Web. This has been in existence since last year and we'll try to update it as often as the information for the mailing list. The home page will contain more detailed information concerning times, schedule of events, directions on how to get there, competitions and housing.

The address is "www.tripnet..se/sak/nas".

* STraight BBS. This is the Swedish Atari Club's home BBS. Information concerning NAS will be included in the SAK menu. You can also use this BBS to ask any questions you may have. The telephone number is: +46 31-336 39 73.

* Our club magazine, "AtariMagasinet", will contain adverts with more detailed information concerning NAS97 in issues 1/97 and 2/97. This is the largest mailshot we will send to our (SAK's) members.

* Our show co-ordinator is Rolf Johansson. He's supposed to know everyting there is to know about NAS97. If you have questions to which you've been unable to get answers anywhere else you can send him a message at "rojo@tripnet.se" and you'll get your answers. If you wish to get into direct contact with him, he can be reached on his mobile 'phone on +46 70-669 52 35.

WE'RE LOOKING FORWARD TO SEEING YOU AT THE NORDIC ATARI SHOW 1997!

```
Don't Fear's Huge Second Auction (Update 21)

Part 1: 2600/5200/7800

Notice there are some new items!

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

"The Seasons don't fear the reaper" - WQQT56A@prodigy.com

3648. Don't Fear's 2nd Auction (Update 21) Part 2

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-15 00:00:00 UTC
From: WQQT56A@prodigy.com
Message-ID: <5iuk7r$ppm@newssvr01-int.news.prodigy.com>
Source record: 73763

```
Don't Fear's Huge Second Auction (Update 21)

Part 2: Everything Else

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

Mike,
Good to see you here! I got the XF551 working last night. I now have a chance to go through my 8-bit files (Thursday->Saturday). The program was from Antic Magazine (or was it Analog (one of them, anyway)). If I come across it, I'll call you.
Could you post the files to JACS? I'll grab them then make an ARC file with them AND the program and post it to Umich (via Bill Kendrick).
I'll be copying as much of my 8-bit files to my ZIP drive during that time. Should be good!

On the Atari 8-bit, .OBJ, .COM and .EXE filrs are the same. MS-DOS makes a differentiation between .COM and .EXE. .COM files are commands like CD. These are also only up to 64KB. EXE files are regular programs that generally have screens, like menus, or other applinacion stuff. These files can be any size.

Given a decent look at a "TRANSDISK file," it probably wouldn't be TOO
hard to reverse-engineer the format and come up with something to write
it... DEFINITELY with a decent look at a file AND THE LOADER...

The simplest hypothetical format for a "TRANSDISK file" would be a simple
"image" of the original tape, as the tape format itself contains all
information necessary for booting the tape...

3655. Re: 6502 Flag behaviour

>reset at the time of BNE, as we do ORA with a non-zero number. But then,
>this fragment of code loses any sense. Does anyone know how Z flag
>behaves in such situation?

Zaks' PROGRAMMING THE 6502 indicates that the N and Z flags will be
"changed" (i.e. "affected") by the ORA instruction. Presumably you knew
this and are saying to yourself, "$FE or'd with $08 is always non-zero, so
it's pointless to TEST for zero!"

However, there are always possibilities...

First, if you've correctly transcribed the code above, note that you're
not OR'ing a VALUE of $FE with a VALUE of $08 -- you're OR'ing the
contents of _address_ $FE with a VALUE of $08. So, the state of the Z
(and N) flag(s) will differ depending on the contents of address $FE.

Second, if you've mistranscribed the code, and the original code really
does OR a VALUE of $FE with a VALUE of $08, well, it's always possible
that some OTHER piece of code might branch to the ORA instruction,
performing the OR operation with accumulator-contents OTHER than $FE...

I've got it sitting here, and I love to type... so clip and save, Eidolon
lovers!

First, from the back-of-the-box:

LUCASFILM GAMES
The Eidolon

Scientific Curiosity or Passport to a Magical Dimension?

Discover the secrets of _The Eidolon_, a mysterious 19th century
machine powered by the forces of magic. If you can control the powerful
energies of this ancient apparatus, an unseen world is yours to explore.
The Eidolon lets you teleport and transform enchanted creatures --
Greps (TM), _Biter Birds_ (TM), and _Bottlenecks_ (TM). ANd challenge
the "intelligent" _Guardian Dragons_. You can create and capture magic
fireballs... perhaps even alter the flow of time itself!
And whatever happened to the machine's mysterious inventor? Only the
adventurous of spirit will know his fate. _The Eidolon_ -- scientific
curiosity, or passport to a magical dimension?

And now the manual...

[illustration - looking up at dark figure silhouetted in doorway at top of
stairs; dusty, cobwebby desk and stuff in bottom foreground...
caption - "Alone at the bottom of a narrow stairway, in a deserted mansion
at the edge of town, you come upon an ancient mystery - and the beginning
of a strange new adventure...]

The Agon Mansion

More than a hundred years ago, the eccentric scientist and inventor Dr. Josef Vincent Agon lived here -- a recluse who shut himself up behind the locked iron gates and the tall shuttered windows of the great Victorian mansion. In his studies of the powers of the human mind, Agon distinguished himself as one of the world's greatest scientists. But the nature of the experiments conducted in this mansion remains a mysterious secret. Was he exploring the powers of the mind... or the powerful and dangerous forces of the occult? Was he a genius... or a madman?

No one ever knew. Agon disappeared without a trace. His relatives closed the mansion, and it has remained locked and deserted.

Until now.

For tonight, walking nearby, you discover to your surprise that the iron gate stands ajar. Curious, you push the gate open and cross the front path. As you touch the brass knob, the door yawns open with the groan of rusty hinges.

At the end of the front hallway you discover a secret passageway. A mysterious glow emanates from below -- a pale, haunting light that draws you, almost against your will. Step by step you descend the long, narrow stairs, where no one has ventured in over a hundred years...

Dr. Agon's laboratory!

Among the dusty equipment stands a mirror, aglow with pale light. A fantastic machine faces the mirror, a device that looks as if it may have been designed for travel -- but what kind of travel? THe ornate timepiece in the center of its control panel is frozen in time, both hands at twelve o'clock.

On a small writing desk nearby, you discover an old leatherbound diary. Perhaps this will explain the mysterious device. Breathless with curiosity, you begin to read the yellowed pages....

April 21, 1850

My hands still tremble with excitement as I write these words. For today I have tested "The Eidolon" -- the device that represents the sum of a lifetime's research into the mystical powers of mind. Whether I have failed or triumphed I cannot say. I can only describe the strange mysteries I have seen.

Seated in the Eidolon, with the power reserve at its peak, I pressed the trigger at the side of the main operating lever. Across the room I had set up a mirror to view whatever changes might occur during the experiment. To my surprise, the mirror itself began to glow. The light grew brighter and more inviting until it seemed to envelop the room. I found myself within the light, transported by it, until suddenly I seemed to enter a mysterious landscape -- a series of cavens that opened in many directions.

Strange glowing spheres of energy -- some red, some blue, some green or gold -- rushed past. I hardly knew whether to dodge or chase them! Then

the strangest vision occurred: a statue of a troll-like creature appeared, then came to life and began to walk towards me. No sooner had this curious apparition appeared than I found myself back in the laboratory, the power reserve of the Eidolon abruptly depleted.

Have I discovered some alternate mystical world that coexists with our own? Or have I inadvertently _created_ some new and frightening world by unleashing the powers of nightmare and fantasy?

Tonight I am exhausted. But tomorrow, with the Eidolon's power reserves replenished, I shall attempt to find out.

April 22, 1850

I have no explanations for the mysteries I have encountered. The Eidolon was designed to tap the limitless energies of the mind. Instead, I find myself transported into a world of vast strangeness inhabited by creatures of the most extraordinary kind. Are they simply the shadows of the mind made substantial? Or are they denizens of a world as real as our own, but made up of energies and forces of a very different nature?

For now, I can only describe these strange inhabitants. I have attempted a few rough sketches of those I have encountered.
[illustration: short, squatty humanoid troll/devil w/horns on head, pot belly, three fingers/toes on each limb, and a general look of power and mischief]

Most frequently I have seen these troll-like inhabitants, who seem quite content to let me pass. But I must be careful not to touch them, lest they drain the Eidolon's power reserve.

[illustration: short, squatty "baby dragon"-looking critter]

The Biter Bird is quite different. These creatures attack without provocation -- although once or twice I have managed to scare them away.

[illustration: top, front, and side "technical drawings" of The Eidolon (NO callouts of components etc. -- just pretty pictures]

[illustration: six-legged, four-body-segmented insectoid with helicopter blades (!)]

This creature, the Rotofly, is less dangerous than annoying. I have found that they scare easily -- all I have to do is approach one and it gets out of the way. But no sooner do I turn around than I find it behind me, still whirring and hovering.

These various inhabitants appear to be attracted to the power of the Eidolon. Indeed, they seem almost to feed off the Eidolon's energy. Thus, if one touches the device, the power is depleted and I am transported back to my laboratory.

May 1, 1850

I have begun to investigate the strange physical nature of the spheres of energy. Their colors appear to indicate something of the type andlevel of their energy:

RED: The red fireballs are the most destructive. When a red fireball strikes the Eidolon, its destructive energy drains the device's power qreserves. When I launch a red fireball at one of the underground inhabitants, the creature is thrown backwards by the impact, its powers weakened. The effect is only temporary, however, for the creature soon recovers and attacks with renewed vigor.

GOLD: Gold fireballs, rather than endangering the Eidolon, actually recharge its power reserve. I have encountered them at irregular intervals throughout the caves - fireballs the same color as the Eidolon, suspended in the air. To tap their energy, I must simply approach and collect them.

BLUE: These fireballs have the astounding power to alter the flow of time. When I have managed to catch one, the Eidolon's clock suddenly lights up with blue energy, and I gain time to explore the caves. The Eidolon itself can also generate blue fireballs, which have an even more amazing effect. Creatures struck by a blue fireball immediately freeze in their tracks. The effect lasts only a short time -- although long enough, perhaps, to deal with troublesome creatures.

GREEN: Green fireballs have the most extraordinary power to transform one creature into another. When an inhabitant of the caverns is struck by a green fireball, it instantly changes into a creature of a different shape! There is no way to know whether the new creature will be more or less dangerous than the one before.

Although the Eidolon is capable of generating fireballs exactly like those that course through the caverns, the process quickly drains the device's power reserves. But I have learned that I can target and capture the energy of the fireballs -- with the exception of the destructive red fireballs, to be sure -- and thereby recahrge the Eidolon's power reserve.

[illustration: screen-shot from the game; Eidolon control-panel, with callouts:
A: (upper-left "C...H" meter) : Proximity Meter -- Shows how close you are to the dragon.
B: (upper-right "-...+" meter) : Energy Meter -- Shows your energy reserve.
C: (central clock : Time Clock -- Shows remaining time in fractions of a minute.
D: (leftmost of two lower-right cirles-with-numbers-in-them) : Time Counter -- Shows whole minutes left.
E: (rightmost of two lower-right circles-with-numbers-in-them) : Level Counter -- Shows which level you are on.
F: (small circles to upper AND lower, left AND right, of central clock) : Fireball Indicators -- Shows which colors are available; flashing indicator shows which color is selected.
G: (lower-left bank of three diamond shapes) : PowerJewels --

Indicators glow when jewels have been collected.
H: (outer rim (?) of central clock) : Direction Indicator -- Shows which direction you are facing.
]

May 14, 1850

Today, I encountered a creature I have never seen before. When I directed a red fireball at this guardian of the caverns, the creature disappeared -- and in its place, a mysterious glowing jewel of energy appeared. I collected the jewel and stored it in the Eidolon. Exactly what it is or how it functions I don't yet know.

[illustration: The Dragon ... well, it's a dragon...!]

May 21, 1850

There are mysteries within mysteries in the world I have discovered. Having reached the end of the cavern, I came upon a stone statue of a dragon. The statue was protected by a mystical barrier of energy, shimmering red. All my attempts to breach the barrier so far have failed...

May 25, 1850

I have discovered a way to capture red fireballs! Launching a red fireball at another causes their energies to combine to form a gold fireball which is then safe to capture. In general, fireballs of equal energy will combine, but higher energies always absorb lower energies.

One by one I have gathered up the mysterious glowing jewels of energy, until I now possess three of them -- red, green, and blue. Today, as I approached the statue of the dragon at the end of the cavern, I tried ramming the barrier. Suddenly it glowed red, my red jewel vanished, and the barrier of mystical energy dissolved! The dragon was awakened. In a moment its furious attack depleted the reserves of the Eidolon, and I found myself back in the laboratory.

Tomorrow I shall confront the dragon again...

May 27, 1850

Again I faced the dragon. With all the energy I had left, I attempted to subdue the writhing creature with fireballs. I tried every combination of red, green, blue, and gold. Suddenly the energy from one of the spheres I fired overwhelmed the creature.

In that instant I experienced a great surge of energy, not unlike the flash of light that occurs each time I enter the mystical realm, and I was transported into another level. Before me stretched caverns even more twisted and maze-like than before, with fireballs even more numerous than before, and strange new creatures. I shall attempt to describe them.

[illustration: globular creature with suction-cup/hose-like snout, and side and tail fins/wings] These odd inhabitants, which I call Puffer Birds, have the ability to catch the glowing spheres of energy and blow them back.

[illustration: two-toed/fingered humanoid insectoid] This is a Grep. The Grep is extraordinarily curioius and alert. It is best to remain perfectly still when one approaches, for they frighten quite easily, and they can be very unpredictable.

[illustration: one-eyed, four-fingered, no-toed, pot-bellied humanoid (head is the single eye, on a long neck)] This odd apparition, which I call the Bottleneck, is one of the more dangerous guardians of the underground caverns. There are ways to maneuver the Eidolon around a Bottleneck, but it isn't always easy.

June 2, 1850

It has been more than five weeks since I first tested the Eidolon.

The mystical world is composed of many levels, each a maze of caverns. The caverns become more twisted and complicated the deeper I go. The entrance to each level is defended by a fierce dragon. No two dragons are alike. Each has its own vulnerabilities, which I must discover in order to pass.

Each level has its own guardians as well, strange creatures that hoard the glowing jewels of energy. Only with the power of these brilliant jewels have I been able to breach the mystical barriers that protect the dragons.

So far I have counted five levels. If my suspicions are correct, there will be seven levels -- seven the mystical number. Past the seventh level, who knows what awaits!

June 13, 1850

Last night, I had a strange vision -- half dream, half fantasy. I imagined I had made it through the seventh level, past the final guardians. Suddenly, against an immense and limitless sky, I beheld a many-headed dragon more fearful than anything I have encountered.

With the light of morning, the vision lingers, too vivid and haunting ot be dismissed.

As I face the unkonwn at each level, I find myself less afraid. It is as if, in confronting these fierce guardians, I am confronting my own fears. Today I intend to set out to discover once and for all the great secret so fiercely guarded by the dragons. My excitement combines with a strange sense of dread, for each time I venture into the mystical realm, I find it harder to return to the real world. Something irresistable and compelling awaits me. I have no choice but to follow, wherever it may lead....

QUICK START

Loading Instructions

Set up your computer as shown in owner's manual. Turn on drive and TV. Plug joystick into first port. (Commodore 128: set system to Commodore 64 Mode.) Insert game diskette with the label for your computer facing up and turn on your computer. Atari: the program will autoload. Commodore 64/128: type LOAD "*",8,1 and press RETURN.

Commodore 64/128 with Epyx Fast Load (TM) Cartridge. Turn computer off. Insert Fast Load Cartridge into the cartridge slot and turn computer on. Hold down Commodore (C=) key and press RUN/STOP key to load game.

1. Begin Game. Press the red button on the joystick or Atari: press START. Commodore 64/128: press FL.

2. Move Through The Caverns. Push joystick in desired direction: forward, backward, left or right.

3. Shoot Fireballs. First choose the color of fireball b pressing 1 Red, 2 Gold, 3 Green, or 4 Blue. To fire, press the red button on the joystick.

4. Capture Fireballs. Approach fireballs, centering them in the diamond-shaped cursor, and press the SPACE BAR.

5. Collect Jewels. Approach jewels, centering them in the diamond-shaped cursor, and press the SPACE BAR.

6. Release Jewels. Approach the dragon barrier. If you have the correct jewel, the barrier will dissolve; if not, the barrier will glow the color of the jewel you need.

7. Pause and Restart Game. Pause - Press P. Restart - Atari: While paused, press RETURN. Commodore 64/128: Press RESTORE.

8. Reboot Game. Atari: Press SYSTEM RESET.

Hints

Red fireballs are deadly! To avoid them, try to move out of their way or shoot a fireball at them to discharge their energy.

When you have defeated the guardians and collected as many of the jewels as you can before your time runs out, approach the energy barrier in front of the dragon. When you have defeated the dragon, the gate behind him will open and you may proceed to the next level.

To replenish the Eidolon's energy reserves, capture as many gold fireballs as you can.

Enjoy!

Chris Chiesa

Hallo !

I&#65533;m a little bit worried about these endless auctions in this group.

F.e. don&#65533;t fears auctions takes app. 35 kB every day , and I couldn&#65533;t
imagine that most of the people are very interested in.

Could this only be sent to people who are interested in by mail ?

I think, it&#65533;s o.k. to make an announce, that an auction is started, but
leave the rest ...

How is your opinion ?

Matt

Here's what I think about multiple, frequent postings of stuff
for sale on the usenet.
(Following is the 'Advertising on Usenet: How to do it, how not to
do it'. It is an official Usenet document. It is useful for new
people especially, that may not understand some of the underlying
principles of the usenet. Many may ignore it, and we'll continue
to see rude multiple postings of stuff for sale. For rudeness,
we all get trash e-mail. 'Auctions' fall under the same category
of trash rude excessive 'bandwidth' that ruins the usenet and
internet for responsible, considerate usenet/internet users.
The best response is not to purchase or participate in 'Auctions'.
And to e-mail the posters of multiple for-sales with your displeasure.
Russ Gilbert)

Introduction

Advertising on Usenet is a frequently misunderstood subject. The purpose
of this message is to explain some Usenet conventions regarding
advertising to new users and, hopefully, spare everyone involved a lot of
needless worry.

To start with, let's define the term. "Usenet" is *not* synonymous with
"Internet." Usenet is the system of online discussion groups, called
"newsgroups," e.g. rec.humor, comp.misc, news.announce.newusers,

talk.origins, misc.rural, alt.sex, and so forth.

This FAQ does not attempt to describe in detail all the various ways in which one can conduct commercial activity over the Internet and attempts simply to explain the issues involved in advertising in Usenet newsgroups.

The philosophy of Usenet

Usenet started out in 1980 as a UNIX network linking sites which needed to talk about and receive prompt updates on UNIX system configuration and other UNIX questions. Message traffic started out at a few messages per week, but the system was so useful that traffic quickly boomed and Usenet almost immediately expanded to include forums on science fiction, humans and computers, and other subjects.

In the beginning, Usenet was largely confined to educational institutions such as universities and colleges, and to research companies and other commercial enterprises with UNIX machines on-site. It has now grown to include millions of users at commercial sites such as America Online and at companies around the world involved in every sort of business imaginable. Nevertheless, many of the customs found on Usenet today have their origins in the days when Usenet was very small and most Usenet sites were universities.

That these customs and traditions began when Usenet was much smaller and quite different in nature in no way lessens the anger many users feel when these customs and traditions are violated.

One such custom is the tradition and belief that it is rude to advertise for profit in Usenet newsgroups.

Advertising is widely seen as an 'off-topic' intrusion into the discussions of any particular newsgroup (newsgroup is the Usenet word for discussion group or bulletin board). Each newsgroup has a specific set of subjects it is intended to cover, and in order for newsgroups to function as effective discussion forums, it is important that people stay 'on-topic'. If everyone disregarded the particular topics each newsgroup is intended to cover and simply posted whatever they wanted wherever they want, the entire system would break down.

Due to the decentralized nature of Usenet, there is no one person or body which can "enforce" the custom of staying on-topic. It falls on each user to help preserve the culture of open discussion and free speech that Usenet has come to embody by not posting off-topic material.

This, of course, includes advertising. Advertising is by far the most pervasive form of off-topic posting, and therefore, gets most of the heat.

An analogy

If an analogy will help you to visualize the situation, imagine a meeting at your workplace or school.

At this meeting, people are discussing a certain issue -- for example, getting new sidewalks installed downtown or getting new schoolbooks for the elementary school, or what to do about the new product your company is planning on introducing.

In the midst of the discussions on the new sidewalks or textbooks or product, someone walks into the room, interrupts everyone, then reads an advertisement for a local restaurant. He or she then leaves without waiting for comment.

Now imagine if this happened over and over again each time your group tried to hold a meeting. Every time someone tried to make a point, in walks some other stranger who reads an ad for some business that has nothing to do with the subject of the meeting.

It would soon become rather difficult to hold effective meetings, wouldn't it?

Similarly, it's very difficult to keep Usenet newsgroups interesting and useful when people deluge newsgroups with advertisements.

The hidden cost

One of the things that attracts some people to the idea of advertising via Usenet is that it costs so little to do it. You pay $20 or $30 per month for an Internet account, and you can post literally *millions* of advertisements at no additional cost.

But there *is* a cost. Each message you post takes up disk space on each site around the world where it lands. People don't much mind paying for disk space to hold Usenet discussions since they know that people like taking part in those discussions and since they know that it's sort of like mutual backscratching: "I let your messages reside on my site for free, and you let the messages I post reside on your site for free." Everyone benefits from interesting, informative, or amusing discussions, so no one really minds paying for the space.

But there's only one person who benefits from advertising: the advertiser. Sure, you can say that the people who see the ad benefit from the product or service advertised, but when you balance that against what they lose when their favorite discussion group is taken over by non-stop advertising, it's a poor trade.

No one wants to give their disk space for free to someone who selfishly posts a copy of an advertisement to every newsgroup on Usenet.

How to advertise on Usenet

There *are* acceptable ways to advertise in Usenet newsgroups.

1. The on-topic notice

If you have a product or a message that is specifically related to a particular Usenet newsgroup, and you want to let people know about it, it's *usually* all right to post *one* notice about it.

Note the word "notice." A notice is a brief mention of the product with information about how interested persons can find out more. It's not a sales pitch. It's not an advertisement. It's not a "BUY BUY BUY" sort of message. It's a notice.

You are encouraged to make such postings one-time-only. When your polite informational notice starts getting posted every week, people are going to start getting irked at you.

You are also *strongly* encouraged to keep such postings hype-free. What often works very well is to post information about your services or product and include a contact address, World Wide Web site, or phone number for people to use to get more information.

For example, if you want to post a notice about your immigration law services, you could post a message to alt.visa.us or the various misc.immigration.* newsgroups, where you'd find a large population of people interested in that or related subjects. Posting the same ad to rec.sport.football.college would *not* be appropriate because rec.sport.football.college has nothing to do with immigration law, visas, or becoming a citizen of another country.

One way to tell if a post is appropriate is to look at a newsgroup's charter. The charter is the formal declaration of what is on topic and what is not, and was generated at the time the group was created if the group was created in the so-called Big 7 hierarchies of comp.*, soc.*, rec.*, talk.*, misc.*, news.*, sci.*, and humanities.*. Some other groups have charters as well, but not all -- and if they do, they're often one or two lines in length. Where can you find a charter? Well, in some cases the charter is regularly posted to the newsgroup or is contained in the newsgroup's Frequently Asked Questions files. In other cases, the charter has been all but forgotten. Charters can occasionally be difficult to locate, so you may have to use your best judgment and/or ask someone who's been reading the group for a while if a particular message would be appropriate.

This is not to say that on-topic notices will always be welcome; the proliferation of inappropriate advertisements (ads posted in the wrong way to the wrong place) has resulted in *all* ads, even informational notices posted to appropriate newsgroups, tending to get a cold shoulder. You can help by limiting your ads to *informational* postings posted *only* *where* *appropriate*, and abiding by any local restrictions a given newsgroup's readers have placed on advertising.

2. *.forsale and *.marketplace newsgroups

There are many newsgroups directly involved in selling. You can generally spot them by the word "forsale" or "marketplace" in their names.

For example, rec.games.board.marketplace is a newsgroup where people post for-sale and want-to-buy notices about board games they want to buy or sell.

Similarly, the misc.forsale.* hierarchy is full of newsgroups for buying and selling various computers, monitors, printers, devices, and so forth, as well as misc.forsale.non-computer.*, for selling stuff that's not computer-related. However, the misc.forsale.* policy is rather resistant to *commercial* ads -- the hierarchy is intended as a place to post classified-style ads.

Many parts of the Net have local hierarchies as well where you can post for-sale and want-to-buy ads.

For example, in central North Carolina, the triangle.* hierarchy has triangle.forsale and triangle.wanted, where classified-style advertisements are the rule of the day.

It's generally considered rude, though, to crosspost a notice about your product to every forsale newsgroup, even ones on the opposite side of the country or world. Post your notice only to your *local* forsale newsgroup, if one exists.

3. comp.newprod

If and only if you are with a computer company which is releasing a new product and you want to make word of this new product known to the computing community, you can post a notice to the moderated newsgroup comp.newprod. The moderator of comp.newprod requires submissions to be informative and hype-free so people will use comp.newprod as a reliable way of gaining information.

4. biz.*

There is a hierarchy of newsgroups called "biz.*" which exists mainly for announcement from companies of new products, fixes and enhancements, postings of demo software, and so forth. If your site carries biz.*, and you feel that a biz.* hierarchy group would suit your purposes, go to biz.config and ask for it.

Be warned, though, that if your goal is to create a biz.* newsgroup for posting hype-filled advertisements, no one would read such a newsgroup. People only want to read newsgroups that are of benefit to them; they're not about to subscribe to a newsgroup that's nothing but ads for Bob's Bait and Tackle.

There are a few dozen biz.* newsgroups, some of which get used regularly and some of which are essentially defunct. If your site carries biz.*, you can find out more about the hierarchy by asking in biz.config, biz.general, and biz.misc.

How *not* to advertise on Usenet

Unfortunately, there are just about as many *inappropriate* ways to advertise on Usenet as there are appropriate ways.

1. Posting off-topic messages in unrelated newsgroups

Each message you post to Usenet, regardless of its content, should only be posted to related newsgroups.

For example, you run a rug company. You want to sell lots of rugs. So, you post an advertisement about your rugs in sci.physics. Not surprisingly, a lot of people send you email telling you what a jerk you are.

Why'd they do this, you ask? It's simple: sci.physics has nothing to do with selling rugs. Your ad was as off-topic as if someone had tried to get a discussion going there about the upcoming football season or started posting a lot of messages about their recent vacation.

Suppose you own that rug company, and you regularly read rec.crafts.textiles.weaving. Would you like it if someone started coming in and posting a lot of ads to the newsgroup about ginseng tablets, and then someone else came in and started trying to sell magazine subscriptions, and before you knew it, it became hard to find any actual discussion of weaving going on?

Try to look at it from the other person's point of view. If you'd resent someone posting an ad for *their* product to *your* favorite newsgroup, why would you post an ad for *your* product to thousands of other people's favorite newsgroups?

Remember the Golden Rule: "Do unto others as you would have them do unto you."

2. Spamming

Spamming is defined as posting identical or nearly-identical messages (not just ads, although ads are usually what spammers post) to a lot of newsgroups, one right after the other. Since it's really not that difficult to write a program that will post the same advertisement to dozens, if not hundreds or thousands of newsgroups, a lot of people have taken to doing this.

What's happened to people who've spammed?

They've lost their accounts, been mail-bombed (had thousands of pieces of junk email sent to them), had people call up and yell at them in the middle of the night, had people forward their mail (by this I mean paper mail, not email) to someplace strange, had people sign them up for thousands of unwanted magazine subscriptions, had people send them thousands of pages of condemnatory faxes, and so forth.

Nothing is as hated on Usenet as spamming. It's extremely, unbelievably rude and if you do it, you *will* come to regret it.

This is not a threat -- it's an observation. Any benefits spamming might have brought you will be more than counteracted by the intense public outcry against you in every newsgroup you posted your ad to.

Some members of the media have gotten the mistaken impression that spamming is hated because it's *advertising*. While it's true that Usenet users don't have much fondness for advertising, the real reason spamming is hated so much is because it's unbelievably *rude*.

If you don't regularly read a newsgroup, why would you post an ad to it? In so doing, you're basically saying that you don't care what the people in that newsgroup think or whether your ad might inconvenience them; you're out to benefit yourself. When you spam by posting the same advertisement to hundreds or thousands of newsgroups, you're saying that your personal profit is more important than the discussions of millions of people.

Would *you* like it if someone came by your house day after day and shoveled several thousand copies of an advertising circular through your windows?

Each copy of the ad takes up disk space on thousands of machines around the world -- and if you post the ad 1,000 times, that's millions of copies of your message that *you* are making other people pay to store copies of. When you spam, you're hogging hundreds of thousands of dollars worth of other people's storage space.

So please, don't do it. I've already explained that *one* copy of an off-topic ad is rude because it has nothing to do with the group it was posted to. Multiply that by a thousand times to get an idea of how rude it is to spam.

A quick note about what happens to spam:

Another consideration against spamming is that Usenet readers developed defenses against it, so it's not very effective. There are quite a few spam detectors running on Usenet, and if one of them detects that the same message has been posted repeatedly to multiple newsgroups, the humans who run those spam detectors will step in and actually *erase* the spamming messages with 'cancel' messages which are honored at most sites around the world.

A common misconception shared by many members of the media is that spam is bad because it's *advertising* and that people who cancel spam are doing so to get rid of *advertising*. In actual point of fact, most Usenet users consider cancellation to be extremely bad manners and something to be done only as a last resort. When spam-cancellers cancel spam, it's done because of the *volume* (posting hundreds of times), not because of the content.

The analogy that's often used is that yes, you have the right to walk down the street and say whatever you like -- but you do NOT have the right to stick your head in someone's house at 3 am and shout through a bullhorn.

So if you *do* spam, you're likely to lose your account, have your personal life made a living hell, possibly get sued by people whose storage space you're taking up, and in the end, not very many people are even going to see your advertisement. It's just not worth the grief you'll get.

Sorry to be unpleasant about it, but spam's a really bad idea.

Finally, if you're wondering where the term "spamming" came from, it came from a Monty Python sketch in which the characters were in a restaurant which mainly sold Spam. Items on the menu included things like "Spam, Spam, Spam, eggs, ham, and Spam." Whenever the waitress recited the menu, a group of Vikings in the corner would chime in with her, chanting the word "Spam" over and over, drowning out everything else.

Some members of the media have spread the explanation that the word "spamming" derives from throwing chunks of Spam into a fan. This is not where the term comes from.

3. Unsolicited junk email

Another often-practiced and often-punished scheme is to send email to thousands of strangers whose addresses you found in various Usenet newsgroups. In the last year, dozens of people have lost their Internet access after sending thousands of strangers ads for timeshare condos in Cancun or dubious credit schemes, and yet, the junk email continues to flood in.

Suffice it to say that junk email, using Usenet posters' addresses, is a really bad idea. Most sites will yank your account if you do that kind of thing.

4) 'Mail-Merged' ads

Some advertisers noticed that it was only *identical* postings that were getting cancelled by the spam cancellers, and cleverly came up with a way to post their ad to dozens of newsgroups while varying a line or two to make it look sufficiently different to avoid being cancelled.

For example, one book editor posted ads to dozens of newsgroups about his book, essentially giving a sales pitch for said book, while adding a paragraph to each article that purported to contain the text that had been printed about each newsgroup in said book.

It was rather obvious that the editor wasn't interested in getting feedback on the text since the book had already been published; eventually an employee at the company admitted that the technique had been used to try to avoid triggering the spam cancellers -- and that the point had indeed been to broadcast the ad widely without getting cancelled.

Don't do postings that say things like "Congratulations, REC.FOOD.DRINK.BEER reader, you are among the lucky few to be included in this amazing offer." Spam that makes a token effort to relate to each newsgroup it's posted to is still spam, and will still be erased on sight.

Conclusion

To make a long story short, off-topic advertising and advertising that equates to a bullhorn stuck into someone's window in the middle of the night are bad ideas.

Please exercise restraint and don't make the mistake many have of thinking that just because there's no central authority that can punish you for spamming newsgroups, that there will be no consequences if you do.

There will be consequences if you spam -- and you might be surprised by the lengths that vengeful Usenet users can go to when someone spams their favorite group with yet another off-topic advertisement.

If you want to advertise on Usenet, you can, but please follow the tips contained in this document's "How to" section and don't make the mistakes listed in "How not to do it."

Stay on topic; keep your notices hype-free; only post your notices to newsgroups where they are appropriate.

Do unto others as you would have them do unto you.

Afterword: Advertising on the Internet

It should be noted that there are many ways to advertise on the Internet that don't involve Usenet at all.

Usenet, you see, is NOT the same thing as the Internet. Usenet is transmitted via the Internet, but is also transmitted via other means (see "What is Usenet" in news.announce.newusers for more information). The Internet also includes services like ftp, telnet, gopher, and the World Wide Web.

A World Wide Web page allows you to put up graphics, text, and sound in an interactive hypertext format that's remarkably easy to set up and use. Many thousands of companies and individuals and organizations have put up World Wide Web pages that can be viewed by anyone around the world with a Web browser such as Mosaic or Netscape.

Since the only people who see a Web page are people who *choose* to see it, and since the person who pays for the storage space necessary to hold the Web page is the person or business or organization who put it up and designed it, a Web page is a *much* better way than advertising on Usenet to put your company's information up on the Internet.

If you need help getting going, ask the people who run your site for help on getting started; usually, all you really need to do is go buy a book on basic HTML (Hyper-Text Markup Language) design and/or scout out the newsgroup comp.infosystems.www.authoring.html. It's really not that hard to set up a Web page, and it's much, much, much more neighborly to put your advertising message on a Web page than to barrage the readers of Usenet.

IF YOU HAVE FURTHER QUESTIONS:

A board of experienced Usenet users stands ready to help suggest
non-destructive ways to use Usenet for your commercial purposes. Send

Don't Fear's Huge Second Auction (Update 22)

Part 2: Everything Else

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

Yep, and also there are aictions that have other computers and software of so,
and they put it in een atari group...

And they do not reply with any comment, I already have write some message
about this to those people..... No answer or any comment....

There are also people that have to pay for every 1kb or so they download from
the net.... Well hope someone knows how to get right of them.....

T'will work, in text mode. Careful about line feeds. Most printers have the option in hardware (dip switch) or software (send a certain code... be sure to send it!) to add linefeeds to carriage returns automatically (default is not to, since IBMs send both). Some interfaces add the LF to the CR automatically (that is, convert an Atari EOL (end of line) to a CR+LF) some only convert the Atari EOL to CR. (check... does your interface add them? can the printer be configured to add them? Can your software be configured to add them -- I believe TextPro has a command to enable it to add the LineFeeds). Careful about graphics programmes. Many only have Epson dot matrix graphics. Even if they support the graphics mode of the printer, it would be best to have the PRINTER add the LF (with a DIP switch setting) rather than the interface (for some graphics programmes, like PrintPower, can send a 155 as a bit pattern... converting that to CR+LF can change the number of bytes received, so that the number of bytes is different from the expected of graphics bytes and can lead to difficulties). Other programmes (like DaisyDotIII, and, I believe, PrintShop) do not send 155s (best) (but I doubt they will have a graphics driver for the new printer... but maybe it has an Epson dot matrix/9 pin emulation mode... most no longer have that). Also be careful if you use software to configure the printer, since some programmes may send a printer reset code (changing your setting) (you may have to check the manual on sending the codes to change the printers defaults if it does not have a hardware switch).

You can use the text modes, though... however, you may have to write your own printer drivers (I had written a complicated one to use my old StarNX10, for example, in TextPro... a long set of defined codes and macros to load RAM fonts, change to italic, bold, large size, math characters, mail merge, etc.) and modern printers come with little (if any) documentation (got a HP 600... the "manual" is basically a disk with a Windows print driver and a booklet on how to install the driver... that's it! -- however, I did get the codes to use the printer from the HP web site... however, I am using an IBM now, my sister having the Atari 800XL -Rambo upgrade- and NOT using it <damn>)

The HP box says it requires 3 Meg (even on an old 286 computer). Bull.

It has a plain text mode (with printer commands for vertical print, envelopes, bold, italics, different fonts, etc.) and one can use it without using their memory hog of a driver. As long as printers handle ascii, you can use them (if they have a standar parallel port) (I am waiting for someone to come out with a graphics only printer, demanding the Windows printer driver and forbidding the COPY of a text file to the printer and where pages HAVE TO BE drawn using the Windows driver... all printers, so far, except for special ones, like PostScript, STILL support ASCII and still have enhancements to their ascii mode -- like italics, several fonts, etc.)

So... you can pretty much forget what it says on the display or the box (this printer requires Windows 3.x and three megs of memory) for plain text (even with enhancements). You may not have a graphics driver for it, though (and the dox I found on the HP site did not describe the graphics dump format or the RAM font format) but you may be able to write one.

So... plain text... fine. Enhanced text? Find the dox for the printer's text enhancements and you may have to write a set of macros/printer codes for, say, TextPro (my favourite Atari word processor... but I had that jumping through hoops... too bad I don't have the computer here now <damn>).

In short... go for it.

looking for Saigon: The Final Days ?
you will find it at "Jellystone", megadisk no.4

ftp://ftp.hackerz.com/hackerz/atari/web/index.html

go to "Atari Archive" and choose "megaimages".
the file "games004.zip" is the right one ...

bye, sven.

3669. ANTIC Mode 3

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-16 00:00:00 UTC
From: Michael Current <mcurrent@carleton.edu>
Message-ID: <mcurrent-1604970911200001@mcmdc.library.carleton.edu>
Source record: 73700

I was building a chart showing ALL the various ANTIC graphics modes, based on several sources. I discovered that even within De Re Atari I have conflicting information about ANTIC Mode 3, the only one not directly accessible from BASIC via the GRAPHICS command.

Here's my chart. Is Mode 3 40x19 or 40x20? How many colors are there?

Is there an easy way to demonstrate this mode from BASIC? (Then I could confirm these things myself!)

Thanks!

```
ANTIC OS Display Resolution Number of
Mode # Graphics # Type (full screen) Colors
-----------------------------------------------------------------
2 0 Char 40 x 24 1 *
3 - Char 40 x 20 ??? ???
4 12 ++ Char 40 x 24 5
5 13 ++ Char 40 x 12 5
6 1 Char 20 x 24 5
7 2 Char 20 x 12 5
8 3 Map 40 x 24 4
9 4 Map 80 x 48 2
A 5 Map 80 x 48 4
B 6 Map 160 x 96 2
C 14 ++ Map 160 x 192 2
D 7 Map 160 x 96 4
E 15 ++ Map 160 x 192 4
F 8 Map 320 x 192 1 *
F 9 + Map 80 x 192 1 **
F 10 + Map 80 x 192 9
F 11 + Map 80 x 192 16 ***

* 1 Hue; 2 Luminances
** 1 Hue; 16 Luminances
*** 16 Hues; 1 Luminance
+ require the GTIA chip, not present in earlier 400/800's.
++ Not available via the BASIC GRAPHICS command in 400/800's.
```

>devices. I'm not too sure about the parallel interface.
>
>

Nope, the 850 goes into the SIO. It emulates one full (or nearly full) RS-232 port, two less complete ones, and one for current-loop devices. None follow the IBM "standard" for pin assignments,
even though the connectors are DB-9's. There is also a parallel port, which has the VERY strange configuration of coming out as a DB-15!

The 850 served me very well for many years before I got my P: R:. The P: R: burnt out its parallel connection one day, and was replaced with another. That one never was used as a parallel
connection, however, because I was able to get a Grafix AT. The Grafix AT made it possible to print out ATASCII graphics at the flip of a DIP. It also took some load of the P: R:, which had R2:
going to a null-modem cable to my clone. When I added an early SIO2PC later, I found that while it was working the P: R: wasn't getting enough power to run, even though it was first in the daisy
chain. The solution at the time was to buy a Switched Quintopus and put the P: R: and the SIO2PC into the switched ports. If one was on, the other was off. Later SIO2PC's came with diodes to
eliminate that problem.

But I recently dug out my 850 again, when a friend asked me to configure a modem for him. It was a 14.4Kb external, and it wouldn't go beyond 4800 baud through the P: R:. The 850 showed that it
could work at 9600, and my friend was advised to use his 850 as an interface. To my knowledge, however, he never tried out the modem.

Hang on to your 850's, especially if you don't run a Black Box or MIO. They and the homebrew R-Vertors are the only interfaces I know of that reliably go to 9600 (the Black Boxes and MIOs go to
19.2.)

I was wondering how to start a new set of newsgroups. They need ones with auc.* They could post here that they are starting an auction, and put the actual content in auc.video.games.classic or auc.sys.atari.8bit or auc.whatever. Trying to find posts with actual content is a real pain. I was looking in rec.games.video.classic, and those auctions are coming at you like bullets, and they are hard to dodge. Some of them have 4 or more segments. I don't pay by the K, but I would be really pissed if I did. As it is, they are just annoying. If anyone knows how to start new newsgroups, get after it, or let me know and I will do what I can. Lets give these auctions some place to go.

Anybody with me???

3674. Retriving old Atari Writer files to PC?

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-16 00:00:00 UTC
From: SpencerH@cc.usu.edu
Message-ID: <861216647.30380@dejanews.com>
Source record: 73705

I have a quick question. Back in the old days we had a Atari 800xl and a program called atariwriter. My mom gave the old computer away, but we still have the discs that we saved everything on. She wote her Journal on these disks and I was wondering if there is any way to retrive that data from the old atari disks and change the atari format into a fomat that I can save and use on a PC like a text file or something. Any Help would be greatly apreciated.
Thanks
Blake Hale

Hi! I'm currently mid-way through an auction that has a LOT of cartridges, disks, and hardware, many very rare, for all the classic computer systems, such as

Atari 400/800
Atari XE
Atari ST
Commodore 16
Commodore 64
Commodore Plus/4
Commodore Vic-20
IBM
Apple 2
Amiga
TRS-80/Radio Shack Coco
Texas Instruments TI99
Adam/Colecovision computer
Spectravision
Sperling

And more...!

If you're interested in checking out the list of games, please send me a message at JeffGamer@ipof.fla.net. The auction goes into once-twice-sold on Sunday, April 20th, and a couple of items have buyout offers on them too, which I'm considering, so please let me know ASAP if you're interested...!

Thanks a lot, and happy hunting! :-)

>
..there were a couple of weird things... "black screen" Atari DOS 2.6f
(I was told the f stood for fast, but on my 1050 the speed was the same
as 2.5), and another similar atari DOS.. Smart DOS was great cause it
could test drive RPM & a couple other things.. I think it could
dynamically reallocate disk buffers (great for saving RAM), and it gave
me the most free RAM under Turbo BASIC of all the double density
DOS'es.. any old SmartDOS users out there? I never could figure out how
to use wildcards in a directory listing (like DIR *.COM)

> Something to play with, this Turbo Basic. I located also a copy of the

>
I have that one on a 1050 disk, and it still worked about a year ago..
but it gave you 8K less free memory than Atari or Turbo BASIC did.
Haven't played around with it very much... I know that it doesn't allow
abbreviations for commands (POS. for POSITION, O. for OPEN, etc) which
to me outweighs any advantages there may be to using it.

> via the GRAPHICS command.
>

Mode 3 is weeeeird! It's an 8x10 character cell (like GRAPHICS 0, but 2
pixels taller) which is defined by an 8x8 character (like GRAPHICS 0)..
the extra lines are used for true descenders on lowercase characters.
The ANTIC chip automatically draws descenders for characters in a
certain range (CHR$(96 to 127, probably))... I forget all the details,
but I do remember you have to define your own character set for this
mode, and that usually only 18 or 19 mode 3 lines will fit on the
screen. BUT, the OS doesn't support this mode, so you will have to take
a Gr.0 standard display list, change all the MODE 2 instructions to MODE
3, and then blank out (set to 0) the first 5 or 6 lines of mode 3... or
the last 5 or 6... otherwise you will get screen garbage, as the ANTIC
will tell the GTIA to display a screen that is taller than the available
number of scan lines (on my monitor the screen "flipped" like it needed
V-hold adjustment, but could not be fixed with that knob)...

When I dig out the Atari again (which better be soon, as often as I keep
starting sentences with "When I dig out the Atari again...") I'll write
you a short demo of this graphics mode & post it (the BASIC listing)
here (I'll keep it short enough to type in, since I still have no way to
read Atari disks on my PC)

hope this is of some help to you...

3680. Who can fix my 800XL?

Well, Matt, as long as it pertains to 8-bit Ataris, I think it belongs here. Anything is better than only having one or two items listed in a group you're interested in. Don't Fear's auction does attract some folks . I admit to bias, since I have bid on a few items. But e-mail is used anyway, I get updates every day, so you have a point. James.

Does anybody know this game Swordquest : WAterworld? The reason I ask is
I see people bidding $95 for this game when the rest of the bids for Atari
games are like 2 or 3 dollars. What's the big deal with this game??

Matthew, the Atari 850 is a 4 port serial, 1 port centronics parallel
interface, it will work on any Atari 400/800, XL/XE system. All you
need is an Atari 9v power supply, an SIO cable. The cables on the
other hand you may want to order from an Atari retailer, then you can
make up more if you need to. Call B&C Atari Sales & Service, they
stock both the 9 to 25 serial and 15 to cetnronic printer cables for the
850 (if your luck, maybe they have ORIGINAL Atari cables still in the
original packaging, now that would make for a nice addition to your
collection.

Curt

3685. 8-bit forever

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-16 00:00:00 UTC
From: Garry <gtphoto@borg.com>

Hello. Just found your group!

A lot of people just don't get it... why have an interest in such old and less powerful computers? I get alot of grief from my co-workers about my C-64, C-128d, and Atari 5200. What they don't understand is that this is just another hobby or special interest.

For the first time in... about 9 years or so... I got my 5200 working and played some games. I built a simple, but sinister-looking converter which allows the use of an IBM joystick with the 5200. (Big step for a non-hardware guy). A keypad built into the converter box makes it look like a bomb. Anyways, the games brought back memories. And they were even fun. They don't take 32 MB of RAM to run, operation is fast, and I've never seen a game "hang" on the 5200. The Atari also costs about $2,000 less than your average new IBM clone, too.

What about doing work? Ok, I use a Pentium at home. How about at work? SGIs, SUNs, and a Paragon. Sure they are great, but with complexity comes problems: compatability, high costs, and BUGs. Try playing a game on a Pentium and feel good about the fact that you've dropped $2,000+ on a gaming system, with games costing $100 and up.

I think the old 8-bit machines are still a lot of fun. And they'll be around for a long time.

There. Just wanted to get that out.
Thanks

Garry

wasn't Zeppilin Games from UK? They made some Gr.9 type graphic Shooter.
It was Zybex afaik...but it was several years later developed.

btw, "Zeppilin Games" - games were just as good as some really cool Lucas games. (think of Draconus & Blinky Scarry School ... in Gr.9)

: If I can remember... it changed one of the sweep frequencies that
: caused a transformer in the monitor to fry.

No. There was a VIA input bit which was read to determine whether the video was in flyback or not: the ROM code which wrote to the screen buffer waited for flyback. By reprogramming the input bit as an output bit, the ROM could be fooled into thinking that the video was always in flyback, so screen output was much faster. However, you then had two outputs connected together...

Andrew.

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" PD/freeware/shareware developers should also be listed.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No product can be developed by more than one
developer. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete
subscription or ordering information should be given, including prices.
```

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Super-Brief Copyright Primer

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware -protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required for continued use
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

Software is protected by copyright from the moment of creation. No copyright notice is required for copyright protection.

Software does not enter the Public Domain unless explicitly released to the PD *by the copyright owner*. If there is no copyright notice, software must be considered Freeware rather than in the Public Domain.

My article "Intellectual Property Protection for Computer Software" appeared in Atari Classics, 3(1), 1994, pp. 4-7, or see:
http://www.library.carleton.edu/staff/michael/acarticle.html

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of my more prominent sources:
- Atari Classics, published by Bob Woolley
- New Atari User, published by Page 6 Publishing (Les and Sandy Ellingham)
- Classic Computing, published by the Historical Computer Society

"Hi!" to Marek Tomczyk, who has supplied SO much information from Germany.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

3690. Don't Fear's 2nd Auction (Update 23) Part 1

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-17 00:00:00 UTC
From: WQQT56A@prodigy.com
Message-ID: <5j5nqr$1njc@newssvr01-int.news.prodigy.com>
Source record: 73625

```
Don't Fear's Huge Second Auction (Update 23)

Part 1: 2600/5200/7800

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

"The Seasons don't fear the reaper" - WQQT56A@prodigy.com

3691. Don't Fear's 2nd Auction (Update 23) Part 2

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-17 00:00:00 UTC
From: WQQT56A@prodigy.com
Message-ID: <5j5nuu$uda@newssvr01-int.news.prodigy.com>
Source record: 73626

Don't Fear's Huge Second Auction (Update 23)

Part 2: Everything Else

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

In a nutshell, I plugged it in a few weeks ago, the printer correctly went thru its self test and SmartWriter showed on the screen. It has connectors, two joysticks/game controllers and books as follows: Adam SmartBASIC Programming Manual Revised Edition, Typing with Adam, and The First Book of Adam the Computer. I'm in central Jersey and do not want to be bothered boxing it for shipping. Besides its big, heavy and would probably cost a small fortune for shipping and handling.

I have no carts, but did make a couple of tapes for data storage.

Getting grief from your co-workers about your old atari system? What, are
you taking your games to work? I would give you a hard time too!!!
Otherwise, I don't see how its their business what you do after hours.

Glenn,

With the new design we are working on, the system will have built in
PBI slots, one of the features of PBI is the ability is turn off the
processor and allow a PBI card to take control of the system. This
could lead to a later advancement of a 65816 card, but that remains to
be seen. The 2 big parts to this project are RGB output to Atari SC1224
color monitors and working out the details of 2 PBI cards, one is a
parallel/serial, the 2nd is a modem card based on the serial section of
the PBI parallel/serial card. Another project which we may make public
is a VCS 2600 card that is being worked for myself and the other
engineer right now. We're trying to create an 8bit with lots of
expansion and flexibility, adding on more powerful features later will
be made a little bit easier simply by the systems design.

>auc.whatever.

I agree with you, except for the fact that if there are newsgroups which
are for auctions, then there is no need for people to even post here
that they are starting an auction in another group. People interested
in auctions can search the appropriate group and find them for
themselves. It makes no sense to have a post in one newsgroup which
says to look for my post in another newsgroup. Besides, isn't that what
.marketplace newsgroups are 'Supposed' to be for?

> Andrew.

Note that this POKE was a common method for speeding up the screen
display and scrolling on the earlier PETs and had no problems... in fact
it made a significant improvement in alot of games and animation
displays.

It was on the newer 'fat forty' models that the 'problem' appeared. I
guess the larger 12" display controller didn't like it. So beware on
running some of the PET games and scan for that POKE. Some of the
early Cursor games have the POKE in it, JOUST comes to mind. I think
Cursor coded in a 'fat forty detection' in later programs.

I actually put in the POKE a few times on a Fat Forty PET, I didn't
let it run for very long, and fortunately it didn't blow anything.
Those wondering what it looked like, the display was normal for the
first few scanlines and then gradually compressed and not too far down
stopped (was really bright there, since many of the scan lines were
being displayed on one another). The programs would continue but the
keyboard was locked out.

3697. Classic Games For Sale New Item - Space Hawk

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-17 00:00:00 UTC
From: glens@natinst.com
Message-ID: <5j6psi$37e@falcon.natinst.com>
Source record: 73632
Cross-posted to: rec.games.video.marketplace,rec.games.video.classic,alt.games.video.classic,rec.games.video.atari,rec.games.video.misc,alt.games,alt.games.lynx,comp.sys.atari.8bit,comp.sys.atari.st,austin.forsale,dfw.forsale,tx.forsale

I have the following games for sale:
Quantities vary from 20 to 400.

Prices are for 1 to 9 $2.00ea. + Shipping & Handling
10 to 20 1.70ea. + S&H
21 to 50 1.50ea. + S&H
51 to 100 1.25ea. + S&H

For Intellivision:

Space Spartan
Tron Deadly Disks
Star Strike
Beauty & the Beast
Astrosmash
Stampede
Space Armada
Dragonfire
Sharp Shot

Space Hawk (price is $3.00ea. for this game)

For Coleco:

Fraction Fever
Defender
Tournament Tennis (No box or label, new never wrapped)

Centipede (price is $3.00ea. for this game - quantities limited)

Controllers for Coleco original style -
$2.00ea., 5 or more $1.00ea. No boxes, cables are stretched out.

For Atari 2600: (No Quantities)

Asteriods
Astroblast
Space Attack

For Atari 5200:

Pitfall
River Raid

The next 2 games say 2600 on the boxes but are actually for 5200:
Space Shuttle

Zone Ranger (instructions are for the Atari 400)

For Atari 7800: (No Quantities)

Asteriods (Some have no shrink wrap)
Xevious
Robotron: 2084

Hat Trick (price is $3.00 ea.)

All 7800 games have minor dents in boxes from shrink wrap.

For LYNX:

These games are priced at:
1 to 9 $5.00ea. + S&H
10 to 49 $4.00ea. + S&H
50 to 149 $3.00ea. + S&H
150 or more $2.00ea. + S&H

Double Dragon
Qix

New original LYNX power supplies $10.00ea. + S&H
New Rechargeable Battery Pack & Power Supply By GP
$15.00ea. + S&H
This works on Lynx or Turbo Express

* Special Price *

For Intellivision:
Space Spartan in quantities over 100 are $.50ea + S&H

Shipping & Handling Prices:

1 = $ 2.00
2-3 = 4.00
4-6 = 5.00
7-9 = 6.00
10-13 = 7.00
14-18 = 8.00
19-24 = 10.00
25-32 = 11.00
33-42 = 13.00
43-55 = 15.00

So you got it out and there are a lot of users out there digging them out and even going so far as having them fixed..Great for me if it dies on you I can and will fix them as long as I am able..

I keep finding interesting things to do with the comuters just wish I had the time to persue some of the special projects going on from the past.

There is nothing wrong with a computer with 64k or even more as long as it performs for the user. Price on the Atari Software has come way down from $200.00 for Peach Tree accounting package to a respectable price today when you can find it..nothing wrong with that.

Did anyone mention PowerDown yet? :)
That game was great!!

3700. Re: ANTIC Mode 3

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-17 00:00:00 UTC
From: kenneth@daffy.aatech.com
Message-ID: <3355d0fe.347982888@news.aatech.com>
Source record: 73719

On Wed, 16 Apr 1997 09:11:20 -0500, "Michael Current"
<mcurrent@carleton.edu> wrote:

>I was building a chart showing ALL the various ANTIC graphics modes,

[snip]

>Here's my chart. Is Mode 3 40x19 or 40x20? How many colors are there?

A mode line 3 is a 10 san line version of mode line 2. Antic displays
two scan lines od the lowercase characters in the font shifted to
the bottom of the cell. With a properly redefined character set
you can display real descenders on the lower case chars.
There was an word processor (PaperClip?) that utilized this.

The number of colors is the same as antic mode 2.

Since the lines are 10 scan lines tall, the number of lines of this
mode don't evenly divide into 192 (the number of scan lines Atari
decided to use as the limit for the OS generated display lists.)

Actually, that's the only reason it's limited to 192. Most TVs can
handle more and the monitor I used would display ascreen built with a
diaply list of up to 28 lines of mode 0 (text) [or 224 scan lines]
that were still visible on screen. (At 30 lines of text the TV
rolled.) I had some hacks that could display date time, etc in those
extra 8 lines, since the screen editor was limited to 24 lines.

>Is there an easy way to demonstrate this mode from BASIC? (Then I could
>confirm these things myself!)

ummmm....

```
dl= peek(560) + (256 * peek(561));

poke dl+10, 3;
poke dl+11,3;
```

You should now... If I remember what 560, 561 did correctly... have
two lines of mode 3 text on your display.

>Thanks!

Take a look and compare your chart to mine at:
http://www.xmission.com/~trevin/atari/antic_insns.html

BTW, I didn't include the vertical resolution for each mode, since that
can change by adjusting the display list. The horizontal resolution can
also change somewhat. But any change (and using modes not supported by
BASIC) requires writing your own display handler routines instead of
using the OS.

: but it gave you 8K less free memory than Atari or Turbo BASIC did.
: Haven't played around with it very much... I know that it doesn't allow
: abbreviations for commands (POS. for POSITION, O. for OPEN, etc) which
: to me outweighs any advantages there may be to using it.

No matter. That was one fun program to use at times. If you didn't mind typing out the commands, you could program in it. Today's programming packages don't even have this sort of feature. If there was one that had keystrokes that would pop up the command, it would be nice! If you forgot to shorten the commands before you tapped return, then BASIC would give you an error, forcing you to shorten it, and add on the stuff that was cut off when it errored. Drove me nuts.

Does anyone remember a UK Atari 8bit BBs in Birmingham called the Ark ?

Must have been about 10 years ago.

I used to connect up quite a lot, I think the sysop was a guy called James Bastable although I may be wrong, he used to have some funky stuff on the BBS,

All those nights at 300 baud..........

If anyone in the UK is looking at making themselves an SIO cable for the
APE software
I've recently ordered some bits from RS-components and have the part
numbers,

Bit RS part number
14C89 633537 about 80p
UKprice

5.6kohm 0.5 watt resistor 149789 (10 pack)

5.1v zener diode 283659 (5 pack)

If you want any more info drop me a line.

feel free to take a look at my homepage for a complete (i hope
so...) antic-description and other informations for coding
the xl...

http://iraul1.ira.uka.de/~s_tomczy/heaven.html

bye heaven/taquart

ps. why should we not define 1 place for all docs avaible for the xl?
so... all interested people can look at them and do not have to
search the whole web...

example on other platforms:

pc: ftp://x2ftp.oulu.fi
c64: ftp://ftp.funet.fi
amiga: aminet
...
so... should we put all informations on umich-archive???

From: remler@ll.mit.edu
Message-ID: <remler-1804970826170001@macferranti.atc.ll.mit.edu>
Source record: 73642

I have a complete Atari 800 system -- the 800 with 48K RAM, 810 disk drive, 1020 printer/plotter, P:R: Connection serial interface, joysticks, paddle controllers, cables, power supplies, and all original documentation. With this system comes many business programs and zillions of games, many still in their original boxes with documentation. Plus many indexed reference articles from the old 8-bit Atari magazines. The system is in excellent, working condition.

I'm "selling" the package at the MIT Radio/Computer flea market on Sunday, April 20th, corner of Albany and Main Streets in Cambridge, MA. Doors open at 9:OO a.m. If you can tell me a good story on what you'd use this thing for, it's yours for the taking! Look for a beige '92 Camry.

Whilst reading the usual rubbish I find here, Andrew Buckle wrote something=
interesting to about The Ark BBS:

Hello Andrew,

AB> Does anyone remember a UK Atari 8bit BBs in Birmingham called the Ark=
?

Yes, indeed I do. It later became known as The City.

AB> Must have been about 10 years ago.

I first started there about that time. I think it had been running for
quite a while already, though. One of the users Nitram (Dr. Martin
Holland), was the bloke that discovered that the 850 *can* do spit baud
rates.

AB> I used to connect up quite a lot, I think the sysop was a guy called

What was your handle?

AB> James
AB> Bastable although I may be wrong, he used to have some funky stuff on

Bastable is definitely correct, I can't remember his first name for sure,
though. :-(

I am sorry to all of the respondents to my origial posting. Me and my dad have so much stuff, it took a while to compile all of it together in the basement, write a list, and type it! anyway, to those four who first responded(or anyone else) I am selling all of this for $500:

Games
Cartridges-
-(3) donkey kong
-reactor
-frogger
-alien ambush\
-missile command
-twerps
-ms. pac man
-food fight
-star raider
-dig dug
-astroids
-super breakout
-----On Disk-----
-exodus ultima 3
-match racer
-pole position
-wheel of fortune
-flight simulator
-flight landing simulator

*****Misc-*********
-over 34 SPACE disk of the months, w/ utils, games, graphics,
SPACE is still active and has lots o' stuuf availabe 4 cheap. ask for more info.
-10 issues of ANALOG 6 of atari explorer, 10 of ANTIC, over 30 blank disks, disk filers(storage boxes) cables

********Poductivity software**********
-Broderbund SYN-calc(2 copies) SYN file+, SYN chron, SYN trend
-File writer- automatically codes in basic
-home financial management(tape)
-Financial cookbook
-advanced calculator program
-atari writer
-MS BASIC 2
-VisaCalc
-bond analysis

-Print shop, and PS companion
-cardware
-B-graph
-atari basic 1

**********educational*****************
-Delta Drawing epyx fun w/ art
-the graphic magician
-picture painter
-typing tutor
-atari education system
-programming in basic
B*(something)as soccology(probaly Basic socialology, my dads writing hard
-2 read)
- US government
-intro to sound
-joystick sketch pad
-turtle track programming

*******HARDWARE******
(MOST HARDWARE IS IN ORIGINAL BOXES(!!))
1- 130XE
1-800XL w/ 256 k memory

M. Current asks about Antic mode 3. A funky mode AFAIcansee.
2 colors, just like BASIC mode 0. Hit RETURN and only goes
20 spaces. My proggy won't go past line 12. You can type it
in, it is short.
10 scan lines per mode line, instead of BASIC 0 8 scan/mode line.
Thanks M. Current for getting me to clean my workbench a bit.

Don't Fear's Huge Second Auction (Update 24)

Part 1: 2600/5200/7800

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

...yes... but under SmartDOS you press the number of the drive that you want a directory of, and it shows you the directory, without asking you if you want to use a mask (*.COM to only see files ending in .COM, etc..)

BTW, I finally set up the Atari 800XL, and actually was able to transfer files from it to the PC using ATARIDSK... which means all kinds of cool things, one of which is that my assembler I wrote in Turbo BASIC will run under Xl-it... want it? (it's clunky & slow, but it IS new 8-bit software)

3719. Atari 800XL joysticks wanted

hi!

anyone know where i can get some working joysticks for my old atari 800xl?
i once heard that the older Sega joysticks worked . any info would be
appreciated.

thanks,
carol

Sega control pads work (The sega Genesis, I guess... they are all black, with rounded edges, and 3 buttons marked A, B, and C, and a START and SELECT button)... although only one of the buttons will work.

Another good source would be flea markets or thrift stores. There were many, many joysticks made to the Atari 2600 standard (Atari 800, VIC-20, CBM-64, they all used the same joystick port) and you can usually find one that will work (I even found a Wico red bat handles model brand new in the box 2 years ago!)

Actually, most old joysticks work...because the Atari 8-bits use the
standard Atari 2600 joysticks and those made compatible for the 2600.

Unlike, say, the Atari 5200, there are still a *lot* of working joysticks
for the 2600, and therefore, the 800XL and other Atari 8-bit computers.

I don't mind the auctions.. in fact its very interesting to see classic 80s computer h/w and s/w for sale.. whether its Atari 8bit, 2600, C64 or whatever.. also gives people ideas how much the stuff is worth..

>
> I have two, from the MAD label, Spellbound and the Last V8

Mastertronic is/was imho just a low-cost label. They distributed cheap
games on cassettes in whole europe.

wait a minute ... ah! yes here is my collection:

Master Chess - cool chess if you ask me
Milk Race - a little bit too hard to play
Hover Bover - my first game on Atari. I was never able to finish that
game
Kikstart - what a game. I played hours and hours - it was never
boring
One man and his droid - I never played this one succesfully :(

I still have some Zeppilin Games titles... cool stuff.

Here's a detailed list of the computer books (90% Atari 8bit) I have for
sale

But first, the original software..

B/Graph with Enhancement disks from Antic plus original spiral bound docs
$15

Sentinel One
Stellar Shuttle
$2 each (sorry no docs, no nothing with these two)

Lode Runner C64 version one side, Atari 8 bit (48k) version on other
with original box
$5

Dos 2.5 original disk with spiral bound docs
$5

Dos XE : original disk with spiral bound original docs
$5

original docs for Cartridge Demon Attack
$1

Now for books, magazines..

The following are original spiral bound...
COMPUTE 1st Book of Atari, (c) 1981 $10
COMPUTE 2nd Book of Atari, (c) 1982 $5
COMPUTE 2rd Book of Atari (with RARE 1200Xl memory map) $10
COMPUTE 1st Book of Atari Games $5
COMPUTE 2nd Book of Atari Games $5
COMPUTE Mapping the Atari (complete 400/800 memory map) $12

Epson FX-286 9pin printer manual $2
Atari SX212 manual $1
SpartaDos 1.1 original manual with 1050 Ultraspeed installation docs
$5

basic for adventure games and graphics the Atari way $2 both
Compute Magazine issues Septemeber, october and november 1981 $10/each
Compute Magazine April 1982, June 1982- Nov 1983 (complete) $5/each
Computer December 1983 (mega issue) $8
COMPUTE magazine Jan. 1984 - December 1986 $3/each
COMPUTE October 1987, April 1988 $2/each
COMPUTE May 1988- March 1989 $1/each (no more Atari 8bit support in these
uissues)

Family Computing March 1985 $1
Atari Adventurer April 92 $1
Consumer Resport Feb 1984, compares C64/Xl/Coleco and TRS 80 $2
Users Guide to Atari (contains product info) $2
Computer monsters (basic programming book) $1
Atari Explorer Jan/Feb 89, February 1992 (both issues $3)

Analog November 1989 $2

Antic magazines June and May 1983, $4 each
Antic June 84, Aug to Dec 84, $3 each
Antic January to December 1985 complete, $2.50 each
Antic Jan 86, Feb 86, May 86, April 87, May 87, July 87, $2/each
Antic Sept 87 - December 87, $2/each
Antic March 88, June 88, May 88, $2/each
Antic october 1988 thru to May 1989, $1.50 each

Antic Anthology 1982 Volume 1, book.. $5

Prices are in US funds and are firm unless you want to buy more than one item.. then prices are negotiable..

Please reply via private mail.

3725. Atari 800 Stuff - Where Can I Sell This?

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-18 00:00:00 UTC
From: Heather Krause <hkrause@iname.com>
Message-ID: <3357D460.2B42@iname.com>
Source record: 73656

Spring house cleaning. I've got some old Atari stuff that I hardly ever used and probably never will (can't seem to get AutoCAD to run on it... <g>). Does anyone know if any of this is of use to anyone? Is there some BBS or Usenet area for locating users? I *really* don't want to package this stuff up and ship it anywhere, so if you know of someplace local to Kansas City..... (yeah, I know, I'm not asking much!)

What I have:
Atari 800XL
Two 1050 disk drives (no disks)
A Joystick
A Koala Pad graphics tablet (don't think there's software)
Taxan Vision 210 monitor

Several cartridges:
Defender
Demon Attack
Star Raiders
Donkey Kong
Missile Command
Qix
Galaxian
Pac-Man
Joust
Eastern Front
Basic XL

If you could reply or cc: me via email, I'd appreciate it. Thanks.

Did you american guys never heard of the great BIBO-Dos? This is my
favourite TOP Dos! Just imagine: turn on the floppy drive, turn on your
atari and your DOS boots up with a room inside the floppy.

3730. Announce: Atari800-0.8.0.tar.gz with Ron Fries Pokey Sound (Linux)

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-19 00:00:00 UTC
From: "David J. Firth" <david@signus.demon.co.uk>
Message-ID: <Q$yI3FAUMBWzEwU$@signus.demon.co.uk>
Source record: 73661
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

I've just uploaded the latest version of Atari800 to my web site. The
emulator comes as source code for Linux/Unix and as an executable for
MS-DOS. The Linux version has sound support using Ron Fries Pokey Sound
Emulation library via /dev/dsp. It should be possible to use sound on
other Unix system if /dev/dsp is replaced by /dev/audio.

Atari800-0.8.0.tar.gz can be obtained from the following site:-

http://www.signus.demon.co.uk/david/

Changes in 0.8.0
----

o Added Ron Fries Pokey Emulation routines for sound in Linux.
A million thanks to Ron for releasing these routines - I've
put off using sound for ages but it took less than an evening
to add sound using these routines :-)

Sound is setup for Linux using /dev/dsp but it also seems to
produce something using /dev/audio, which leads me to believe
that it should work on most Unix boxes with a little work.
Patches welcomed :-)

In order to support sound I've added a few new command line
options:-

-sound and -nosound do what you'd expect.

-dsp_divisor takes a decimal value which alters the quality of
the sound output. It is used to work out how much
sound should be created each time the screen is
refreshed. Ideally it should be 50 (PAL) or 60 (NTSC)
but I've found that the best value to use is about
5 less than the emulators screen refresh rate WITH
SOUND DISABLED. If the values is to high you will
get gaps in the sound. If the value is to low the
emulator will run slower than it should.

I strongly suggest you experiment with this parameter
in order to get both the best sound and performance.

o Support for an Experimental New Cartridge Format - with the use of
OSS Super Cartridges there is no way of automatically
distinguishing standard 16K cartridges from the various Super
Cartridges. Hopefully this format will do for cartridges what ATR
files did for disk images. Feedback and view would be welcomed

especially from the other Emulator Authors.

The current format is :-

first 4 bytes containing 'C' 'A' 'R' 'T'.
next 4 bytes containing cartridge type in MSB format.

Type 1 - Standard 8K Cartridge
Type 2 - Standard 16K Cartridge
Type 3 - OSS Super Cartridge (I heard rumours that there are two
different types of OSS Cartridges)
Type 4 - Atari 5200 Cartridge

Note: There is probably a case for extra cartridge types
indicating the system that needs to be emulated.
e.g. Standard 8K Cartridge (800 Mode Only).

next 4 bytes containing cartridge checksum in MSB format (ROM only).
next 4 bytes are currently unused.
followed immediately with the ROM data, typically 8, 16 or 32K.

In the next version I'm intending on adding:-
32 bytes for Cartridge Name
32 bytes for Cartridge Serial Number
32 bytes for Manufacturer

The current version of the emulator includes options in the
Cartridge Management screen to Create Cartridges in the above
format but be warned this format is likely to change.

Changes in 0.7.1
----

o Note: I now consider the new Menu System that runs in the Emulated
Atari's window to be the prefered User Interface. I have no
intention of doing any further development for XVIEW

o Cartridge Management added to Menu.

o Removed FFP Code.

: ...yes... but under SmartDOS you press the number of the drive that you
: want a directory of, and it shows you the directory, without asking you
: if you want to use a mask (*.COM to only see files ending in .COM,
: etc..)

For some strange reason, I'm getting the feeling we're going 'round and 'round in a post circle, talking about the same thing, and then some. Now we're talking about the little nuances of each DOS. :)

: BTW, I finally set up the Atari 800XL, and actually was able to transfer
: files from it to the PC using ATARIDSK... which means all kinds of cool
: things, one of which is that my assembler I wrote in Turbo BASIC will
: run under Xl-it... want it? (it's clunky & slow, but it IS new 8-bit
: software)

Mine's in my room already, all stacked up neatly. You may want to also upload your program to the Jellystone archive as well. Try uploading it to alt.binaries.atari, as that'll be great for the Atarians on here as well.

Right now, I'm still working on the STs and so on. I just recently finished a power supply cable that will allow me to hook up the ST to an external power supply, and also have the AT-Key installed, which is a PC keyboard adaptor.

I have the following items for sale:

Hardware:

Star SG-10 printer, 9-pin dotmatrix, like new condition, with manual,
in original box. Includes extra ribbons. New ribbons are readily available
from most office supply stores. I'll also throw in an APE-FACE parallel
interface (kinda beat-up but works) for Atari 8-bit computers. $22

Zenith ZVM121 green-screen 80-column composite monitor. $15

Audiotronics monochrome 80-column composite monitor. $10

Atari 8-bit software:

Silent Service, disk only. $5

Choplifter, disk only. $3

Atari Silent Butler, bookkeeping software, with box and manual. $6

Bank Street Writer, disk only. $4

Atari Timewise, disk and manual. $5

Math Blaster, educational game for Atari or C64. 2 disks. $5

Print Shop Companion. Disk only. $4

Gorf, cartridge. Only works with 400/800. This cart won't run on an XL. With
box and manual. $4

Prices do not include shipping. I am in Dayton, Ohio.

Thank you
->Sean Tierney
->allnet@Prodigy.Net

I remember wasting weeks trying to get past the road block. I still havent yet made it past this point. BTW, it's not just text, it also has graphics (at least my version does anyway), cause I remember standing on a land mine and not being able to move, except to blow up and die :). (That foot on the screen is imprinted on my mind after seeing it many times over).
As I remember this was not very far from the start of the game, so as time went on after trying so hard- I gave up almost ripping up the disk....
All I remember having was a piece of paper that said "Code = White Xmas", and there was a radio playing "Bing Crosby's White Xmas". Everything I tried led to death and re-starting the game. Like the dead VC with a booby trap that went off if you tried to move him, and as I said- the minefield that you get stuck in, and the road block where the VC shoot you as soon as you try to get near them. Hey, if anyone can help me get past this point I'll get into it again after all these years of not knowing what the hell to do.

Stevo.

>
>Yes, indeed I do. It later became known as The City.
>
Ah, the good old days :) The Ark was the first BBS I remember calling on a
regular basis....

> AB> Must have been about 10 years ago.
>
>I first started there about that time. I think it had been running for
>quite a while already, though. One of the users Nitram (Dr. Martin
>Holland), was the bloke that discovered that the 850 *can* do spit baud
>rates.
>
I remember Nitram well, but it was actually me who discovered the split
baud rates on the 850... not that it mattered much - it was about the time
that 1200/75 ceased to be useful and most modems being produced then could
do 1200/75 without needing split rates between the computer & modem anyway
:)

> AB> I used to connect up quite a lot, I think the sysop was a guy called
>
>What was your handle?

Andrew, your handle was Roo or something was it??? Your name is ringing
bells here :)

>
> AB> James
> AB> Bastable although I may be wrong, he used to have some funky stuff on
>
>Bastable is definitely correct, I can't remember his first name for sure,
>though. :-(

It was James Bastable right enough... used to chat to him occasionally on
another BBS, The Phoenix I think, but haven't heard from him in years now.

The Ark & City were run using software James wrote himself, and The City was a really fun bbs... given enough privileges you could add new 'rooms' to the bbs (I created an online pub as I recall!)

I've never come across another bbs quite like the City, and it was a big loss when it finally closed.

I've often wondered if James ever got onto the 'net??? Anyone ever come across him since?

Geoff McHugh

3738. question on the 130xe

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-19 00:00:00 UTC
From: aen1575@silver.sdsmt.edu
Message-ID: <aen1575-1904971733490001@dialup11.sdsmt.edu>
Source record: 73669

today i bought an atari 130xe with a printer and a 1050 disk drive for $5. however, the package included very little software, and no power supply for the computer or disk drive, and no cord to interface the drive with the computer unit. at a local thrift store, there is an atari 800 with an 810 drive and a printer with all the cables and some software. will the supply and disk drive cords work with the 130xe? how about the software? i'm really new to the atari computer world, so excuse my ignorance.
also, i'm curious if the 130xe will run any type of midi controlling software, or is it too ancient? if so, what do i need to get that to work?
tony nelson

3739. Don't Fear's 2nd Auction (Update 25) Part 1

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-20 00:00:00 UTC

"The Seasons don't fear the reaper" - WQQT56A@prodigy.com

3740. Don't Fear's 2nd Auction (Update 25) Part 1

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-20 00:00:00 UTC
From: WQQT56A@prodigy.com
Message-ID: <5jc326$11p4@newssvr01-int.news.prodigy.com>
Source record: 73574

Don't Fear's Huge Second Auction (Update 25)

Part 1: 2600/5200/7800

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

working joysticks, set of paddles, power supply, R/F modulator, and
the following loose games: Combat, Defender, Space Invaders, Missle
Command, Pac-Man, Asteroids, Bezerk, Swordquest Fireworld, Raiders of
the Lost Ark, RealSports Football, E.T., Pole Position, Target Fun,
Pitfall!, Barnstorming, River Raid, Donkey Kong, Riddle Of The Sphinx,
Astroblast, and Frogger.
SOLD $29.00 james

Sears Video Arcade II (2800) - untested w/two controllers, and a R/F
modulator
SOLD $10.50 zack

Arcadia Supercharger with the following cassettes: Phaser Patrol,
Communist Mutants From Space, and Suicide Mission (no case)
G2 $20.00 greg

"Franklinstein" A handcrafted American orignal device that allows
the user to interchange chips to play diffrent games. Comes with
eight tested chips: Mini Golf, Grand Prix, Baseball, Q*Bert, Kaboom!,
Amidar, Demon Attack, and Pitfall!. The device itself is homemade,
not the games. Also comes with case. If there are any questions
don't hesitate to ask. This thing is trully one of a kind.
G1 $15.50 dave

Atari 5200

Congo Bongo (R) SOLD $3.50 jeffd
5200 Trac Ball G1 $10.00 bworkman
2600 adapter - untested G2 $6.00 jeffd
5200 controller - untested SOLD $4.00 jml
5200 controller - untested SOLD $4.00 jml

Atari 7800

Asteroids (R) - damaged box SOLD $2.50 foo
Food Fight (R) - damaged box G2 $6.00 tick
Pole Position II (C) SOLD $1.00 eyabs
Xevious (U) - damaged box SOLD $2.00 eyabs
Donkey Kong Jr. (R) G2 $5.00 tick

This auction is dedicated to Bill Musselman and University of
Southern Alabama men's basketball team.

I bid in an occasional auction myself. But what does bother me is :

1) Auctions that last forever; I think one week is sufficient

2) Auctions that post updates several times per day

There really should be some reasonable limits in place. Matthew

From: nickb@primenet.com
Message-ID: <5jch4p$ck0$1@nnrp01.primenet.com>
Source record: 73578
Cross-posted to: comp.sys.atari.8bit,comp.sys.cbm,comp.sys.apple2,alt.bbs

Reading a discussion of Atari BBSes on comp.sys.atari.8bit, I remembered my friend, Banzai, who ran the Abattoir Flats BBS over here on his Commodore 128. He claims to have, on disk, the last moments of many defunct Commodore BBSes in the Valley, such as the Forum, Midnight Drifter, and several others you may not have heard of. By that I mean, after the sysops took their boards down, they took out the disks and put them in a box for a while so they could play Last Ninja 5, then they gave the disks to Banzai.

He also has saved messages from across the life of many of these BBSes, which is much better because those were more likely to be taken during the prime of the board's life.

I thought it might be a good idea to make use of these old BBSes in some way.... either puting up the BBS on my own phone line for a little while, or putting as much of its "essence" as I could on the Web, i.e. logon screens, the contents of the message bases, the lists of online games and such.

This would probably be a good idea for BBSes of any platform. It would be an interesting read for passers-by and former users. Former sysops stretching for something substantial to put on their web pages could put up the contents of their old BBS. It would be a cultural archive, to examine a pre-Internet on-line society. What were the platform wars like when it was Atari vs. Commodore, and then Amiga vs. Atari? You get the idea.

Since most old IBM or Apple boards ran plain ASCII as far as I can tell, archiving their contents is easy. Might even rake up a few buried treasures for the local ASCII Art archive. But most C64 and Atari 8-bit boards, and I'm told CoCo boards as well, had graphics and/or color that could be typed into messages. To archive these message bases would require either stripping the graphics out, converting them to GIFs (un-economical for an entire message base I think), or programming PETSCII and ATASCII plug-ins for Netscape and IE. Welcome screens and such, perhaps even menus, would work great as GIFs, but you can't GIF a whole message base, I don't think. Well, it might work in ATASCII which was monochrome, but probably not PETSCII so much.

There is also the issue of porting everything to the PC or Mac. Some people don't have the systems anymore, so they couldn't null-modem or 1200-baud it over even if they wanted to. Furthermore, what with converting character sets and all, it just might end up being more economical to post a bunch of .D64/.ATR/.IMG/.ZIP's up for FTP and tell everyone to get an emulator. That, too, would work, but not reach as

wide an audience.

Most of the BBSes my friend has died around 1992-93, so what we'd pretty much be witnessing is the death of the C64 scene in Phoenix, which would be sad for the most part. The Forum, however, went down slightly earlier and was quite a busy board; it only died because the BBS was unstable and kept crashing. Perhaps another of his BBSes died due to CPU failure. Perhaps one of you has the contents of a BBS that died of crashing or CPU failure from the 1980's; these would be even better. Perhaps some of you have disks and disks full of capture logs, even. This is probably the most abundant resource a BBS archeologist would have, since users are typically more plentiful than sysops, and as I stated earlier, logs are more likely to represent the prime of a BBS, because at the end half the posts were like "no new messages again! come on, someone post something man!" I'm sure lots of people have message bases on disk somewhere, or printed out and stuffed in a drawer somewhere.

Who else has stuff like this? Who just thinks it's a neat idea?

Although I am only beginning with Atari 8-bit stuff (I have an old 800
that
my uncle gave me), I seem to remember Alan Alda advertising the Atari
800
and the AtariWriter word processor.

Try to find someone with an Atari 800xl and AtariWriter. Then get them
to
print out the files--if they are as valuable as I think, you will *not*
mind
typing them into your PC. A word of warning: do *not* let the diskettes
get
hot--I lost quite a few C64 diskettes when they got hot during a move
between
states in the US.

My mom recently passed away, so I *know* if I had such diskettes of her
writings, I would try *vey* hard to get them converted. I hope that your
mother is in good health.

> with the computer unit. at a local thrift store, there is an atari 800
> with an 810 drive and a printer with all the cables and some software.
> will the supply and disk drive cords work with the 130xe?
The power supply of the 810 should work with the 1050, too. Maybe also
the power supply of the 800 works with the 1050 (same voltage, maybe
lower VA-Output, needs appr. 3VA at 9V AC). There probably would be no
power supply for the 130XE (needs a 5 pin-DIN plug and 5 V DC). All the
other cables and the printer should work with the 800 as well with the
130 XE.

> how about the software?
Should work (with a hit of 90 percent). The XE and the 800 are
compatible, but some changes within the OS were done. So every program
working with the ATARI-specifications should work, some jumping directly
to the places in the ROM will not (some GAMES, mostly).
But take a closer look to the 800. The keyboard should be much better
and it looks much better ... Maybe there is also an RAM-extension-card
inside ...

> i'm really new to the atari computer world, so excuse my
> ignorance.
Please take a look at Michael Currents FAQ - containing a lot of
information.
http://www.cis.ohio-state.edu/hypertext/faq/usenet/atari-8-bit/faq/faq.html
> also, i'm curious if the 130xe will run any type of midi controlling
> software, or is it too ancient?
Of course - ATARI computers were famous about their Midi-abilities, but
this is the newer ST-series. It looks very similar to the XE-computers,
but is just completely different ! Don't know, if someone built such a
interface ...

> if so, what do i need to get that to
> work?
> tony nelson

Hope this helps a little bit.

3747. Joystick interfaced Voice Synthesizer

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-20 00:00:00 UTC
From: kenneth@daffy.aatech.com
Message-ID: <3359cc0f.608903284@news.aatech.com>
Source record: 73581

Analog Computing (or was it Antic) printed schematics and directions for building a voice synthesizer for the Atari 8-bits. It interfaced using two joystick cables.

I built one and it worked well for a while. Last time I messed with the Atari It had stopped working. (For some reasons stuff was always shorting out and I think static electricity finally whacked that speech chip.)

I was wondering if anyone else had built one of these boxes. I'd like to get one that is working. I recall seeing that sometime after the article was published someone started commercial advertising for a box that was surprisingly similar (dual joystick interface.)

BTW, if anyone has one of these boxes I wrote an ML driver for it that runs off the vertical blank. You can use a USR calls in a BASIC program and send up to 8 separate strings to the driver which then sends the data out during the VBI, freeing up the Basic proggy for other things. (Mini multitasking. ;-)

3748. OSS BASICs

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-20 00:00:00 UTC
From: kenneth@daffy.aatech.com
Message-ID: <33534423.180826054@news.aatech.com>
Source record: 73582

Anyone else out there use (or used) the OSS enhanced BASIC lanuages?
BASIC XL was my favorite. I thought they should have built that into
all the XL/XEs.

I've got a few board games and (not so exciting) action games done in
BASIC XL if anyone is interested. Cutom display lists, P/M graphics,
DLIs, etc.

(Now if I can just figure out how to get them from the Atari to the
Amiga and then to the PC at work.)

Ken.

>First, if you've correctly transcribed the code above, note that you're
>_not_ OR'ing a VALUE of $FE with a VALUE of $08 -- you're OR'ing the
>_contents_ of _address_ $FE with a VALUE of $08. So, the state of the Z
>(and N) flag(s) will differ depending on the contents of address $FE.

No, it doesn't. What the LDA puts in the accumulator doesn't matter.
The BNE sees the flags as a result of the ORA, not the LDA. The LDA
could move any number into the accumulator and it still wouldn't
matter. It's the ORA that affects the flags and ORA $#08 with any
number will always be non-zero, so the BNE is the same as an
uncontitional branch.

>Second, if you've mistranscribed the code, and the original code really
>_does_ OR a VALUE of $FE with a VALUE of $08, well, it's always possible
>that some OTHER piece of code might branch to the ORA instruction,
>performing the OR operation with accumulator-contents OTHER than $FE...

That is a possibility. (But it doesn't change the fact that the BNE
will always cause a branch which was the original question.)

On a side note, (it's been 10 years since I've looked at Mac65) would
anyone recall if ORA is limited to contant values or if something like

ORA $12 or ORA $0682 or ORA ($d0),x are possible?

3751. The Ark BBS

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-20 00:00:00 UTC
From: brad@pianosa.demon.co.uk
Message-ID: <861535495.13688.0@pianosa.demon.co.uk>
Source record: 73585

Whilst reading the usual rubbish I find here, Geoff McHugh wrote something=
interesting to about The Ark BBS:

Hello Geoff,

GM> Ah, the good old days :) The Ark was the first BBS I remember calling

The same for me. I tried several around where I live (Southampton). Of course, none were particularly useful, since they weren't Atari based, nor did they have any Atari related areas. :-(

Although I called regularly, it wasn't frequent. Due in no small part to the swinging 'phone costs, at the time. I could quite easily be on there for half an hour or more, using up my time allowance, achieving little. If only because I was unable to contribute anything useful at that time.

>> Holland), was the bloke that discovered that the 850 *can* do spit baud
GM> I remember Nitram well, but it was actually me who discovered the spli=
t

Eeek! My apologies, for not remembering that accurately. I do recall just how exciting it was, at the time. The news went global at a phenomenal rate, didn't it? And of course, I now remember your name, too.

GM> that 1200/75 ceased to be useful and most modems being produced then
GM> could
GM> do 1200/75 without needing split rates between the computer & modem

Which, for me, was quite handy, because I could never get the software to work properly at switching baud rates. Perhaps because my modem did 1200/75 with internal buffering?

Of course, my V21/V23 modem cost me well over 100 quid, at the time. More than a weeks wages. The last modem I bought (a 14k4 one) cost me about the same. Just the same as computers: The price doesn't change, but you get more for your money each time. :-)

>> What was your handle?
GM> Andrew, your handle was Roo or something was it??? Your name is

No, sorry. I used to call as Lightning, I think. (gawd, it's too far back to remember properly)

GM> ringing
GM> bells here :)

Not from that far back, surely? I was a nobody, at the time. Perhaps more recently? In the letters pages of NAU?

GM> It was James Bastable right enough... used to chat to him occasionally

The reason I was sure about his surname was because I used to wonder whether he was related to Tony Bastable, by then an erstwhile children's TV presenter. (He used to co-present Magpie on ITV) I could never ask James the question though. Even then it struck me as being such a lame question, anyhow.

GM> another BBS, The Phoenix I think, but haven't heard from him in years

It's not a BBS name I remember at all. Whereabouts was that located?

GM> The Ark & City were run using software James wrote himself, and The

I'd forgotten that, too. I remember being very impressed. Things have /really/ changed on the comms front, haven't they? Back then it was all online. Not like now, with off-line readers, linked BBS's (FidoNet, etc), multi-tasking......

GM> was a really fun bbs... given enough privileges you could add new

I could never get my "credits" up high enough, sadly. What were they called? I know it was in the form of some sort of "currency"....

GM> to the bbs (I created an online pub as I recall!)

I used to visit the pub a fair bit, I think. :-))

GM> I've never come across another bbs quite like the City, and it was a

One of the other names I remember was Sheepy. (S)He always used to write 'you' as 'ewe'.

GM> big loss when it finally closed.

How true.

GM> I've often wondered if James ever got onto the 'net??? Anyone ever

I've no idea, unfortunately. Neither have I had dealings with him since then.

I often used to think that NAU (Page 6 as it was back then) didn't do very much to promote the comms scene. At least *that* hasn't changed. Les stil=
l
has very little interest in BBS's or the internet.

The 130XE is semi compatable with the old 800 computer software wise, you would need to find a Translator Disk Atari put out to make it backward compatable on all software.

The power supply for the 130XE is +5 volts totaly different than the 800 computer..an 800XL would be the same..

The old 800 power supply is 9v AC, which would be the same for the 1050 Disk Drive. The 810 power supply will run the 1050 Disk Drive.

3759. Re: Retriving old Atari Writer files to PC?

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-20 00:00:00 UTC
From: cb541@cleveland.Freenet.Edu
Message-ID: <5je91d$5b8@madeline.INS.CWRU.Edu>
Source record: 73593

(Question can transfer AtariWriter files to PC.)
Certainly. It is almost trivial. If all you have is the disks,
all you need is to send the disks to someone with moderate
knowledge, an 8-bit setup and a PC, and either mail the
disks and PC disks back or do like I did for a Mac person
and the person downloaded the Mac 'teach text' files from
me and I trashed the original disks.
This is a common question, and the FAQ partly addresses it
with null modem transfers, sio2pc and pc<->a8 double density
disk read/writes.

well, with virtually no hardware/software support for 7 or 8 years, any
conversation about Atari 8-bits becomes rather circular... Not that I
mind, it's my favorite machine (the one I cut my teeth on)

>
> Mine's in my room already, all stacked up neatly. You may want to also

>
yep... will do, soon as I make sure it doesn't have any really nasty
bugs that will embarrass me (I haven't assembled any files over about
200 bytes long with my assembler, so it's kind of pre-alpha at this
point..) And the keyboard handling will have to be rewritten for the
XL-it keyboard, as it's REALLY annoying to have to use -,=,*, and / to
move the cursor (fine on the Atari, just the arrow keys without CTRL...)

> Right now, I'm still working on the STs and so on. I just recently

>
Alas, I sold my ST years ago, only about 2 years after I got it (neede
the money REALLY bad)... though with 512K RAM and a single-sided drive,
there wasn't too much I could do with it anyway..

> #great#+ultraspeed... <grin> yeah compy shop is clever...

nope... never heard of it... Did it use standard US Doubler compatible
ultraspeed format?

...did anybody ever get Indus GT ultraspeed ("synchromesh" mode) to work
with anything besides the DOS XL version packaged with the drive, or
maybe Sparta X-cart? (It didn't EVER work with ANY other DOS I tried,
not even SuperDOS)

I even still have the Indus, and it can format & write DD disks, which
actually read under AtariDisk on my PC (on a 1.2m drive, even)... and
the Indus will also read disks written by AtariDisk on the 1.2m drive!
Half-width r/w head & everything!

3762. Re: Joystick interfaced Voice Synthesizer

> using two joystick cables.

You wouldn't happen to have the schematic lying around (or even the dead box itself?)... did it use the TI speech chips? As far as I know, you can still get those from Radio Shack catalogs... might be interesting to build one, then build a box to try to run it under XL-it...

On that subject... Has anyone ever come up with a scheme that allows you to plug an Atari-style digital joystick into a PC? Seems I've seen a schematic for hooking up Atari 2600, etc. joysticks to a 5200 (which also used an analog stick, like a PC)... anybody know anything about this?

> Who else has stuff like this? Who just thinks it's a neat idea?

I think it's a neat idea... the last Atari 8-bit BBSes in my area (Atlanta) died circa '89-'90, and I know some of the sysops... I'll see what can be done about getting some of the disks (though the best boards were run on hard drives, which even if they haven't died or gotten reformatted, would be *very* difficult to access, since you'd just about have to duplicate the original, customized, hacked, modified, and tweaked setups that each of those sysops had, and no two are even remotely alike...)

...and I think I have several thousand feet of rolled-up TI SilenType thermal printer paper that I saved when I called BBSes from my high school (they had over $50,000 worth of equipment in the computer lab, but the SilenType was the only thing you could call out on, and you were only supposed to use it to access the "Career Center" database at Ga. Tech...)

such was life in those wild, wacky, bygone days...

>
The ORA instruction can use all (or almost all, maybe) of the 6502
addressing modes.. ditto just about any arithmetic/logic instruction
such as EOR, AND, ADC, SBC, INC, DEC... some modes were not allowed,
sometimes for no apparent reason (I'm sure it would make sense if we
sliced the case open & looked at the chip itself under a microscope,
assuming we knew a LOT about LSI/VLSI chip design and microprocessor
architecture, and microcoding... etc...)

Whilst reading the usual rubbish I find here, Kenneth Jennings wrote
something interesting to about OSS BASICs:

Hello Kenneth,

KJ> (Now if I can just figure out how to get them from the Atari to the
KJ> Amiga and then to the PC at work.)

Null-modem cable to the 'mig. Then use CrossDOS to save them out to PC
format DD disks. That's one possibility. Of course, it relies on you
having either an Atari 850, P:R:Connection, or somesuch....

The newest version is 0.20. Also, make sure you didn't download compressed files. Some of the postings are done with long file names and get truncated by the download software, i.e. the file is called coolgame.dsk.gz and it comes down as coolgame.dsk but it's still compressed. You have to find a gz compatible uncompressor. I think LHA will do it but I can't remember. Hope this helps.

HEY! I'm a mega big fan of Lucas Games. I would like to collect them all.
have there any atarian such a "never released beta Version"?

.atr or .dcm would do it!

The following is a copy of the items listed in an auction I'm currently running. The auction began once-twice-sold today, so if you're interested in bidding, please contact me ASAP at JeffGamer@ipof.fla.net.

Thanks, and good luck in the bidding!

==========

Hi! Welcome to Jeff-Gamer's computer-based auction...! This auction contains a few hundred new-in-the-box and loose cartridges, disks, tapes/cassettes, systems, books, and hardware peripherals for the following systems:

* Amiga * Commodore 16 & Plus/4
* Apple 2 * Commodore 64
* Apple Lisa * Commodore Vic-20
* Apple Macintosh * IBM
* Aquarius * Radio Shack's Tandy/TRS80/Coco
* Atari 400/800/XE * Spectravideo SV316
* Atari ST * Sperry
* Coleco Adam * Texas Instruments TI99

Many of the items in the auction are from my own collection, many others (particularly the new-in-the-box items) are being offered for a local dealer who wants to liquidate his stock.

==========
THE MAIN DETAILS
==========

The regular part of the auction will run for ten days, from Tuesday, April 9 until Thursday, April 18, followed by a ONCE-TWICE-SOLD portion.

VIDEO GAME TRADE BIDS ARE *VERY* WELCOME: There are two ways of bidding: the main way, obviously, is with cash offers. Alternatively, I'm interested in trading for classic video games (Atari, Adventurevision, Vectrex, Colecovision, Atari Video Music, Intellivision, Odyssey, Phillips Videopac, Bally, Fairchild, Microvision, Texas Instruments, RCA Studio II, Turbografx, Sega Master System, and others), as well as select electronic handhelds and *cartridges* for the other classic 8-bit computer systems. If you have items for these systems and want to talk about potential trade bids, let me know, and feel free to send over lists of any length that include cartridge/box/manual/peripheral/system information! Trade offers that include items I need and really want for my collection will get priority, and will be valued accordingly... ;) Also, please

ask for a copy of my full "availability" list if you're interested in trading and have items I'm interested in. I have over 2000 items available for swapping, including many cartridges, systems, and peripherals for classic and modern video game and computer systems that aren't listed below. I also have some board games, electronic handhelds, and records (LPs and 45s).

MINIMUM BIDS INCREMENTS: $1 on items up to $14.99, $2 for items $15-29.99, and $5 for items $30 and higher. In case of duplicate bids being submitted by two bidders, the first bid received is the bid accepted.

*** Please always read the "New Notes" section...it sometimes contains information that bidders really do need to know... ;) Also, I strongly urge you to read the RULES AND GUIDELINES section at the end of the second half of the updates at least once, since I assume if you place a bid that you've read and agree to what the rules say.

** PLEASE remember to provide your name, address, and phone number when you place your first bid, even if I already know you. I will keep all personal data confidential, and will provide my own address/phone number info to the subscribed bidders. For my own protection, I can't accept bids if I don't have information on how to contact you off-line.+ (see full rules at the bottom of this message). My name/address/phone number are listed in the Rules/Guidelines section of this update (it's only fair I give you mine if I'm asking for yours, right?) ;-)

If you'd like to be subscribed to this auction so that you receive all updates via e-mail, or if you'd like to make an offer or place a bid, send an e-mail message to JeffGamer@ipof.fla.net. If you will not have access to e-mail for any length of time, I *will* accept phoned-in bids and will provide verbal updates...contact me to arrange it. The auction will be mostly held via e-mail, with very occasional newsgroup postings.

I also began a board games auction this week...let me know if you'd want to be subscribed to that, too...!

In advance, good luck in the auction!

==========
ADAM/COLECOVISION COMPUTER CASSETTES (all come in the case with the cardboard insert)

AD1: AdamLink.. -- In the case with the cardboard insert!
...$3 gfranks
AD2: Buck Rogers.... -- In the case with the cardboard insert!
...MINIMUM BID $3

...$2.50 stever
TX27: TI Invaders.......
...MINIMUM BID $2
TX28: Tombstone City....
...MINIMUM BID $2

RULES & GUIDELINES:

1) DEADLINES: The regular part of the auction will run for nine days, from
Friday, April 11 until Sunday, April 20, followed by a ONCE-TWICE-SOLD
phase. In the once-twice-sold phase of the auction (which commences after
April 18), all items are marked as GOING ONCE. If they do not receive any
bids before the next update, they'll move to GOING TWICE, and then will be
SOLD in the successive update if no bids arrive beforehand. New bids reset
the countdown on that item to GOING ONCE.

2) UPDATES: I will post updates on-line once or *maybe* twice a week. I
will also e-mail updates to all e-mail subscribers and bidders. E-mailed
updates will be sent _on_average_ once a day (expect only one update on the
weekend).

3) INTEGRITY, AND HONORING YOUR BIDS: Do NOT bid on an item unless you are
prepared to honor that bid and buy what you bid on at that price. I expect
bidders to act honorably--bids not made in good faith hurt all others
involved in the auction--so if you don't intend to honor your bid, don't
make it. If you do not honor your high bids, you will be barred from any
future auctions I intend to hold in the very near future, and I will make
your name and e-mail address available to anyone who requests the list.

3a) WITHDRAWN BIDS: Bids may only be withdrawn if I have not yet sent out
an auction update that includes the bid. Otherwise, once a bid is
submitted, it may not be withdrawn and I expect that it will be honored

in
the event that it is the high bid. So please don't bid on an item and
then
change your mind a week later, even if you found someone else who had
the
same item for less than you already bid. I've had the same thing happen
to
me in auctions, and if my bid still comes in as high bid, I buy it and
wind
up with two, because in an auction this is only fair.

4) CONDITION OF ITEMS: All items in this auction are in good
condition...I've tried to give detailed descriptions of particularly
assets or flaws. Expect that some items may have *minor* flaws (an ink
spot on a box, a small scratch on a cartridge), but major flaws such as
pressed-in boxes, torn labels, pen marks, or multiple personalities will
be noted next to the item. Although some items note particularly
excellent conditions in their listing, all items are in good condition
and may range from good to near-mint, those ones just stood out as
strikingly good to me while I was sorting through what I have. Please
feel free to ask if you need more information--I want everyone to be
pleased with what they win, so better to know in advance.

5) SHIPPING: Buyer pays shipping, which is not included in placed bids.
Shipping will be determined at the end of the auction, when I box
everything up and run to the post office to figure out approximately
what
shipping will cost. Some of the programs are particularly heavy, while
others are light. Shipping will be fair--I have no intention of saying,
"Oh, yeah...that Spectravision game will cost over sixty bucks to
ship...snicker snicker..." Payment is by cash, check or money order in
US Funds, and
should be sent within 5 days of the auction's end. If payment is by
check,
I'll need to wait for my bank to tell me it cleared (usually 7-10 days
after deposit...). Bidders from outside the United States should send a
postal money order, payable in U. S. Funds, or cash.

6) HOW TO PLACE A BID, AND NAME/ADDRESS/PHONE NUMBER INFO: Place a bid
by
item number and/or description. Your first bid must include your name,
address, and phone number (I will provide same to all bidders when they
send that info to me--this is for both your protection and for mine).
My info is: Jeff Rothkopf, 20985 SW 84 Avenue, Miami, FL 33189
(305) 378-6133
I will use the first part of your E-mail address when listing bids. If
you
wish to remain anonymous, tell me what pseudonym you would like to use
and
then remind me of it each time you bid (my memory is absolutely, uh,
what

was I saying...?). For people who will have difficulty getting access to e-mail, bids *will* be accepted by phone, as long as we pre-arrange it. Let me know if you need to do so. ;)

7) MINIMUM BIDS: Minimum bids are listed for each item.

8) MINIMUM BID INCREMENTS are $1 on items up to $14.99, $2 for items $15-29.99, and $5 for items $30 and higher. In case of ties, the first bid received is the bid accepted.

9) TRADING: Trade offers are encouraged. I collect cartridges, manuals, boxes, and hardware mainly for the following: Adventurevision, Atari 2600, 5200, 7800, Atari Video Music, Colecovision, Vectrex, Fairchild, Intellivision, Odyssey, Texas Instruments TI99, some pong systems and other standalones (particularly if they relate even in name-only to older video games & companies), Bally, Turbografx, Microvision, Sega Master System, and Atari & Commodore computers. However, the full list of systems I collect for is considerably larger than *that*! E-mail me with your list of items available for trade (or we could chat via phone, I'm reachable from 10 pm to midnight most nights). Note that since I don't think it's fair to simply remove an item from the auction when I get a trade offer I like, I will follow one of two routes (or a hybrid of the two): #1: a suitable cash-equivalent value for the trade offer based on my particular desire for the item (if I really want it, this will be higher than normal!) and on its estimated value will be set and entered as the bid. #2: I'll let the rest of the bidders know about the offer and set a time-limit on a counter-offer.

10) REMOVAL OF AUCTION ITEMS: Items may be removed at my discretion, although since I don't particularly like the idea of suddenly pulling something out when people are bidding on it, I will usually give notice to affected bidders before doing so.

11) HUMAN ERROR: Auctioneer reserves the right to make changes or correct mistakes made in the posting of this message or along the way.

I have a good Antic collection of magazines and I remember the articles you mention. I think they used GTIA graphics demos. Look for the for sale message I will post later.

I agree not that many ATR images work. Spare Change and Atari Olympics
have worked perfectly.

Who Dares Wins II works but the grafx get fuzzy and the game is
unplayable.. same with War Copter, the screen shakes like crazy. Zybex
doesn't even run. Spelunker doesn't run properly either.

3778. Don't Fear's 2nd Auction (Update 27)

Yes, but there are plenty of 15-year-old 2600 joysticks (and Wico joysticks and others) which still work about as well as they did when they were first taken out of the box.

I have an even bigger problem. I can *not*, for the life of me, figure
out how to get established in the game without getting killed almost
immediately.

Did you test this on an 800XL? Gorf doesn't work on 800XLs. Maybe
this would explain some of the other failures too, if this is indeed
the case.

Gorf should run on a 400/800, but as far as I know, not the XLs.

Howdy !

who has left an old atari console system?

I'm looking for the following things:

* Atari VCS 2600
* Atari 5200 - most wanted
* Atari 7800 - most most most wanted

if anybody has this stuff, and would let it for free or some bucks, he
should contact to me.

and of course, I'm looking for game cartridges.

requirements: good condition, clean, functionable ... *AND* only
european union states (too high shiping costs to the states and rest of
world for me) ... what's about german users?

I have an Atari 7800 for sale or trade. I would sell the PKG for $ 75.00
ot trade for an 8-bit 64K with Disk Drive. I would trade for an

800XL
600XL w/64k
65XE
130XE
1200XL (1200xl must have mpp1150 printer interface)

I have the following.

Atari 7800 no box but complete.

7800 games all have box & docs except Pole Position II

1 on 1 basketball
TD football
Tower Toppler
RS Baseball
Ms Pac-Man
BallBlazer
Hat Trick
Xevious
DK
DKjr
Pole Position II
Asteroids

2600 games loose

Kaboom
Frogger
ET
Pac-Man
Vanguard
Space Invaders
Combat
Defender
Jungle Hunt
Joust
Pitfall

Buyer pays shipping (aprox 8-10 dollars) unless we are trading. NO COD
only money order or trade.

"The Seasons don't fear the reaper" - WQQT56A@prodigy.com

3789. Don't Fear's 2nd Auction (Update 26) Part 2

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-21 00:00:00 UTC
From: WQQT56A@prodigy.com
Message-ID: <5jedop$5d5o@newssvr02-int.news.prodigy.com>
Source record: 73603

Don't Fear's Huge Second Auction (Update 26)

Part 2: Everything Else

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

>was monochrome, but probably not PETSCII so much.

Another way to display the colour/graphic type displays would be to
write a CGI script that created GIFs on the fly. It could even be
animated using server push/pull or whatever its called.

For example to display a logon to a C64 board, your CGI script would
create a new GIF and start filling in the image portion by simply
copying bitmaps of each character using the appropriate colours to
each screen location in the image. Once this image is done it can be
sent to the browser.

To display the next line, the CGI script could copy all but the top
screen line of the image being display to the top of the image and
fill in the bottom line with the appropriate line from the log file.

It might be possible to do this using Java as well but I haven't
looked at Java yet so I can't tell you.

Just something you might want to think about.

3791. XLit! and Ulima series

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-21 00:00:00 UTC
From: sdinitto@tiac.net
Message-ID: <335ae462.16495911@news.tiac.net>
Source record: 73605

So I got XLit! and some .ATR images, but cxan't get the darn
thing to work with most of the .ATR boot images I downloaded. I set up
the emulation correctly, and loaded what I thought were the correct
roms, but I don't see much of a difference without them.

Wait a second... I know about the option key needed to be depressed on
XL-emulation. I used so get that little white cursor in the corner
when trying to boot Ultima III if i forgot... anyways, any of you
successfully download any .ATR boot images(games) and have it work?
Need some help on this one.

> U of T, Comp Sci

First off, this is an Atari 2600 game, not a game for the 8-bit
computers.
Second, the reason it's expensive (tho not as expensive as some) is that
it was never
released, although copies exist.

3796. Atari 1050 Disk Drive

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-21 00:00:00 UTC
From: neil@cushwi.demon.co.uk
Message-ID: <3358f6f1.571050@news.demon.co.uk>
Source record: 73610

I've been given an excellent Atari 800XL with a 1050 disk drive. Alas the 1050 doesn't have a power supply with it. Please could somebody tell me where I can get one in the UK, or alternatively, what voltage / amps the 1050 needs and I'll try to find an alternative.

Keen to get the Atari running as a 400 was my second ever machine (my first being a Vic-20) and I want to be able to relive my youth !

Thanks for your help.

Lord Spatula (Urchlay@bell***south.net) wrote:

: well, with virtually no hardware/software support for 7 or 8 years, any
: conversation about Atari 8-bits becomes rather circular... Not that I
: mind, it's my favorite machine (the one I cut my teeth on)

There's bound to be some new stuff coming out from time to time. I was playing with XLit awhile ago, and playing with the large files with all those games and stuff in there, from Yogi's site. One thing I noticed that when I tried loading certain programs with DOS 2.5, I'd get an error 164. With other DOSes, I don't. David's Midnight Magic is something I'd like to play again, but no matter what, it either refuses to run, or doesn't run properly.

I do remember playing Gumball Factory for hours on end, getting to one of the higher levels, when the worker goes to this huge house.

: yep... will do, soon as I make sure it doesn't have any really nasty
: bugs that will embarrass me (I haven't assembled any files over about
: 200 bytes long with my assembler, so it's kind of pre-alpha at this
: point..) And the keyboard handling will have to be rewritten for the
: XL-it keyboard, as it's REALLY annoying to have to use -,=,*, and / to
: move the cursor (fine on the Atari, just the arrow keys without CTRL...)

The only problem I have is finding room for setting up the 8bit. 4 computers in the same room, and I'm outa room for more. One wall is covered with three shelves full of movies, and so on. So, I'll need to stick with the emulators for now. Plus, I'm upgrading the 486, from a DX4-100 to a 5x86-133, a 2x to 8x, SBPro to SB16, add around a couple more megs of video memory, and go from 16 to 32 megs memory. That's so I can do a few more things I wasn't able to do earlier.

My Black Box is still working, though I need to reset the drives menu selections, as it still thinks I have an 85 meg SCSI drive attached. I made the major goof of actually formatting the boot partition when I thought it was the floppy drive. [sigh] I didn't lose much, though.

: Alas, I sold my ST years ago, only about 2 years after I got it (neede
: the money REALLY bad)... though with 512K RAM and a single-sided drive,
: there wasn't too much I could do with it anyway..

Don't you hate it when you do that? Now there's more you can do with the ST had you upgraded to 4 megs and a DS drive.

I've found that most of the .ATR files on Yogi's site dont work - If
you want to play old 8-bit games like the Ultima series, try out either
the C64S or PC64 Commie emulators or the Apple II emulator ApplePC.
Just goto Http://www.yahoo.com and use "emulator" as the search key.
Then follow the links to either Arnold.no (c64s/PC64) or Asimov for the
Apple images.

I'm not sure if this is the right New group but it's the closest thing I can find so no flames please. If anyone can suggest a better group please let me know.

I have tried for year to complete 'Indiana Jones and The Raiders of The lost ARK' on the Atari 2600 Cart system. I have written to America and got a hint sheet but still no luck.

If anyone has played this game and beaten it on an 2600 Cart than I would love to hear from you. Please email 'r.c.smith@herts.ac.uk' I going mad over it!

Many thanks, (hoping) in advance,

Ray Smith.

---------------------------------------------------------------
Atari 2600 items/8-bit Auction #4
---------------------------------------------------------------
Hi Everyone. Here is my listing and a few simple rules:
Feel free to bid on any item(s).
Buyer pays post office shipping from Canada.
All prices in USD. Canadians can pay in equivalent $CDN.
I will keep you posted on the current high bid(s).
All items are in good working condition(unless noted)
but sold AS IS.
Bidders must supply full name, address, and phone number.
Tentative end of auction is 11 PM CST April 30, 1997.

NOTE: Preference will be given to someone who bids on a majority of
the items. Amount for bulk bids must exceed combined bids.

I reserve the right to sell cartridges separately.
This will result in the min. bid on that cartridge(s)
being subtracted from the bulk bid.

The Double-Ender will only be sold separately and should not be
included in a bulk bid.

Thanks.
David

Ray,

Try "Rec.Games.Video.Classics" for an answer. If that still won't do
it I have the email address of the guy who co-wrote it.

3807. XE Game System blues

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-21 00:00:00 UTC
From: Stephen Knox <gooch@pop.erols.com>
Message-ID: <335BDE98.4DBC@pop.erols.com>
Source record: 73621

Well,

I found an XE Game system for a great price (light gun an FS II cart
included!).

When I got it home I set it up and gathered my cartidge collection to
use on it. To my surprise all my old cartidges didnt fit in the slot!
Only the newer XL/XE carts worked with it (about 10% of my collection)

Any ideas on getting it to work?

Also,
If anyone out there still plays a game or two, stop by one of the two
sites below to register your scores into the High Score table:

http://www.primenet.com/~rfm/cvhigh.html
http://members.aol.com/pbjurman/highscores.html

Later,
Steve

I have a 800XL in excellent condition in a good condition box.
No PSU or UHF lead just unit itself, the box and the styrofoam inserts.

if you're interested make me an offer.

3811. Questions about Das Atari Profibuch

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-22 00:00:00 UTC
From: Lawrence Gold <gold@shell.aros.net>
Message-ID: <5jhj8njbe1@news.aros.net>
Source record: 73542

A while back, someone posted info about Das Atari Profibuch (the 8-bit version, not the ST book of a similar title), but I unfortunately lost it. Could someone please post the information again, such as the publisher (Sybex GMBH?) and ISBN number.

Thanks in advance.

P.S. If anyone has a copy for sale, or is willing to sell me a photocopy, I would really appreciate it.

3812. 5200 carts for sale

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-22 00:00:00 UTC
From: zzyzx97@earthlink.net
Message-ID: <336366e4.1685167@news.earthlink.net>
Source record: 73543

ATARI 5200 carts for sale. There are no boxes or manuals...just the carts. Only tennis is in excellent condition. The rest are used looking, but not torn.

Please make offers. $15 minimum order.

Official Atari 5200 carts:

Centipede
Defender
Galaxian
Jungle Hunt
Kangaroo
Ms. Pac-Man
Pac-man
Pengo
Pole Position
Qix
Real Sport's Tennis
Star Raiders
Super Breakout
The Unknown Cart??? it's Atari, its 5200, its official, it's 1986. It's licensed from Centuri. It's got a red spaceship in the foreground shooting at 3 green space ships in the background. But there is no title on the label. Somebody tell me what this is please???

From Activision:

River Raid
Pitfall

ZZyzx

3814. FS/T: Atari 8-bit computer items [04/22/97]

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-22 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <33639bbf.21864324@nntp.ix.netcom.com>
Source record: 73545

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 04/21/97

NOTE: There are currently 1546 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 4.00 Atariwriter
$ 4.00 Basic -- for use with the Atari 400 and 800
$ 5.00 Centipede
$ 9.00 Delta Drawing (Spinnaker)
$ 8.00 Frogger [Parker Brothers]
$ 2.50 Missile Command
$ 2.50 Space Invaders
$ 4.00 Star Raiders

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).

$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex connector cable.

$29.00

*****

LOT #2

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex connector cable.

This item has not been tested.

$ 5.00

*****

LOT #3

ATARI 820 PRINTER, with one (1) roll of paper and built-in power cord.

This item has not been tested.

$10.00

*****

LOT #4

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$12.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for
something that isn't listed, please don't ask (because if I
had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
considered (especially if the trade offer overwhelms me). I
collect for over 50 different systems, so please feel free
to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't
serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly
listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. I have been in
business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted (also, please check out my want lists,
since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

To reserve any item(s) listed here, please do the following:

1) carefully read the SALES CONDITIONS section first,
2) send me a list of the items that you are interested in,
3) include your full postal mailing address (this information is
for internal VGA use only)!
4) I will reply with a shipping information message for your order.

Thank you!

3816. ATTN MARKUS: Status bits after H: device CIO not ok.

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-22 00:00:00 UTC
From: sidney@ch.twi.tudelft.nl
Message-ID: <335c8dd1.1632776@news.tudelft.nl>
Source record: 73547

```
Hi Markus,

While programming a little utility (SID-LOAD) to load binary
executables from the H: device in XL-IT I came across what I believe
to be a bug. When an IO operation failed, the Y register contained the
error code (as is required) but the 6502 status bits didn't reflect
its status (as is required too).

For example, this will not work:

; ... set up for I/O with H: device ...

JSR CIOV ; do I/O on H:
BMI ERROR ; act on error

; will fall through!

Maybe something to fix for the next release?

Keep up the good work!
Regards,
Sidney Cadot
```

3817. Introducing SID-LOAD: an utility to load games from the PC harddisk into XL-IT.

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-22 00:00:00 UTC
From: sidney@ch.twi.tudelft.nl
Message-ID: <335c8a1a.682403@news.tudelft.nl>
Source record: 73548
Body handling: Inline uuencoded payload not displayed: sidload.atr

Hi all,

I have written a little utility (SID-LOAD 1.0.0) which could be of
great use to anybody who wants to play games on the XL-IT emulator.

SIDLOAD.ATR is a disk image which needs to be booted by XL-IT. It
will (almost immediately) ask you for a filename; this should be the
name of an Atari binary executable (like the ones found on Yogi's
site). It will then try to load&run this image from H1: ... your PC's
hard disk!

(NB, you'll have to specify, in XL-IT, that H1: points to the
directory where these games can be found).

It is now finally possible to select a game from *LOTS* of games on
your PC, without too much of a hassle. Arguably, typing a filename may
even be quicker than running through a list with hundreds of
filenames. And typing the filename is the only thing you'll have to
do!

An added advantage to this approach is that you can use the relative
power of MS-DOS commands to manage your files. There's really no need
any more to have clumsy big images with only 64 entries.

I've tested SID-LOAD 1.0.0 a lot and I think it's very stable. The
only problem I have run into was that some binary executables are in
the wrong format (probably due to bad transfers from the Atari to the
PC). Later this week, I will be releasing some utilities which can
help to fix binaries like that.
Note that this is not a SID-LOAD problem; these faulty executables
will, in all probability not run from DOS or another loader too!

Hope this is remotely useful,

HERE SHE IS:

[Inline uuencoded payload not displayed: sidload.atr]

end

...short, eh? Try it!
Regards,
Sidney Cadot

> BBS or Usenet area for locating users? I *really* don't want to package
> this stuff up and ship it anywhere, so if you know of someplace local to
> Kansas City..... (yeah, I know, I'm not asking much!)

As the president of JACS (Jersey Atari Computer Society), I can tell you
that there are lots of people who can use it. I've had donations from
people that tried for months to sell their stuff, but couldn't. With the
contacts I have, I found a home for nearly every piece of equipment that
was donated. Some I gave to families/w kids who never had a computer.
What people need most, in order:

Disk drives - once they break, it takes a dedicated ET to fix. (read:
impossible)
Computer - yes, once in a while their computer dies, or they want one with
more memory
Joysticks - like disk drives, you can never have too many

So I suggest you go to your local public library and ask them for a list of
computer user groups, call them up and tell them what you have to sell, and
they'll probably know the right people to ask. Keep in mind that it is
very difficult to *sell some of this stuff even if there are people who can
use it.

I have successfully gotten Ultima IV to run on XL-it.. from Yogi's
site.. there are at least 2 copies of all the Ultima games there, for
some reason, and one set of them didn't work for me... I think the ones
you want have uppercase filenames (or if you tried those, I guess try
the lowercase ones...)

>
The mega-images won't work with Atari DOS 2.5 because it only supports
720 or 1040 sectors per disk... error 164 is probably "Bad sector link"
which means the file occupies sector numbers that are out of range for
AtariDOS 2.5.... They work OK with MyDOS, which supports up to 16 meg or
so per disk..

> The only problem I have is finding room for setting up the 8bit. 4

After Eastern Front was released by APEX, but before the cartridge was released by Atari proper, APEX published a book by Chris Crawford, which included the source code to the game and discussion of his methods.

If anyone still has one of these, I would be intrested in purchasing it.
Thanks!

Yeah, I used the Indus high-speed mode with SpartaDOS X. It was a little slower than a 1050 with a U.S. Doubler, and I think it only worked in double-density (I can't recall for certain--it has been several years for me).

I bought one of the first Indus GT drives, and I was always very happy with it. I especially like the design of the drive. It looked great! Syncromesh/DOS XL were really a bust though... even with Sparta X, I basically dumped it in favour of Sparta 3.2c (version 3.2d had a few bugs with BBS Express Pro! I believe).

Does anybosy remember the CPM add-in that was promised at one point to Indus customers? I remember receiving a newsletter about a year or so after I bought the drive that had a few products that were probably all vapour-ware.

I paid $625 (Canadian Money) for the Indus GT at Chiang Computers in Ottawa (RIP) in 1983. To this date this is the largest single computer purchase I have EVER made.

Memories...

```
---------------------------------------------------------------
Atari 2600 items/8-bit Auction #4
---------------------------------------------------------------
Hi Everyone. Here is my listing and a few simple rules:
Feel free to bid on any item(s).
Buyer pays post office shipping from Canada.
All prices in USD. Canadians can pay in equivalent $CDN.
I will keep you posted on the current high bid(s).
All items are in good working condition(unless noted)
but sold AS IS.
Bidders must supply full name, address, and phone number.
Tentative end of auction is 11 PM CST April 30, 1997.

NOTE: Preference will be given to someone who bids on a majority of
the items. Amount for bulk bids must exceed combined bids.

I reserve the right to sell cartridges separately.
This will result in the min. bid on that cartridge(s)
being subtracted from the bulk bid.

The Double-Ender will only be sold separately and should not be
included in a bulk bid.

Thanks.
David
-------------------------------------------------------------------------

I agree. I don't know about use under windows, but I had a 386 with 1 meg of memory running WordPerfect 6.1 for DOS with a HP 600C color inkjet printer. Printing color was extremely slow, but it worked. I haven't hooked up any color inkjet printers to my Atari, but it should work (at least in monochrome mode). To get color to print, you'd have to find out the control codes and send them from your Atari.

> It has a plain text mode (with printer commands for vertical print,
> envelopes, bold, italics, different fonts, etc.) and one can use it
> without using their memory hog of a driver. As long as printers handle
> ascii, you can use them (if they have a standar parallel port) (I am
> waiting for someone to come out with a graphics only printer, demanding
> the Windows printer driver and forbidding the COPY of a text file to the
> printer and where pages HAVE TO BE drawn using the Windows driver... all

Be careful of Windows-only printers--they will not print anything unless you run windows. The HP 820 color inkjet printer is one of these (I tried to use it on the PC in DOS mode, and nothing came out.) These printers operate on the principle that Windows does their processing for them. They probably won't work on the Atari 8-bit.

> In short... go for it.

Especially if you're good at configuring things. Whatever software you decide to use should allow you to configure your printer, and you'll need the escape sequences for whatever printer you decide to buy.

hmm, is the eprom the same size as the atari-basic rom?
In that case you could plug in the eprom the basic-socket and
make a basic loop like: for i = 0 to 8192; a[i]= peek[base+i]; next i;
(well in some disk/cart-based language naturally :)

Or am I way off here ?? ;)

: (don't remember exactly what it was) and got something like 20 or 25
: free lives. (Still didn't finish teh game, tho....)
: Has this happened to anybody else, and was this like a bug in the game
: or an actual secret thing that you could do?

It's possible. I played the thing for hours years ago. I would have remembered where, but I don't. There was one section that drove me nuts, was the elevator that went down this shaft on its own, and you had to wait for it. The ghost would drive you nuts, your timing would be right off, and so on. Lives would be lost galore here. Then you had the bird that was shooting at you. If you shot him, he'd become a star, and come straight down to either kill you or miss you.

However, I do remember doing something in Donkey Kong, while my roommate and another friend were watching, and I somehow made it past the double barrels going by. This thing had a little space in between both barrels. I impressed them both by hopping the first, turning around real fast, then hopping the second, all in a space of two seconds. At the time, it impressed the heck out of me, since that was the first time I did it.

Reminds me of the time I was playing Robotron on an actual upright video game in this ice cream shop. Me, my stool, and the game were all wobbling around in time to the game. Should have seen the owner's face when I left.

: so per disk..

That's what I figured. What you said about error 164 is correct, as I got this numerous times. A few times I'd seen a sector that looped back on itself. Now, to run some of these files, like David's Midnight Magic, I've not been able to do so.

: Pentium or AMD (or Cyrix?)... I'm running a 486DX/2-66 w/8 megs...and
: XL-it still runs fine (though I have to have it skip frames to play
: games...)

It's an AMD. I've been using it for awhile. I just got the new soundcard installed, and it forced me to update my DOS. [sigh] So, I spent the next several hours, backing up my system to tape and another hard drive, updating to DOS 6.22, reinstalling the other partitions, then reinstall the soundcard stuff. What's driving me nuts is the CD ROM, a Mitsumi FX800, doesn't seem to want to be recognized. I've got a few ideas, plus others from the Mitsumi and a couple other websites.

Other than that, the sound is good, and XLit still runs nicely. I'm not much of a gaming person now, though I played them galore before.

: now there's something I wish I had... or maybe APE so I could use the PC
: as the hard drive (though I'd have to make a hole in the wall of the
: apartment since the 8-bit and PC are in 2 separate rooms)

hehe... Some extra cabling could do it. I once had to drill a hole in the wall at home to get our TV hooked up. If you look at it outside, it's split two ways, then three ways in the basement, then two ways in the attic. A whole lotta splittin' goin' on.

Well, yes and no. A friend of mine and I hacked around with the
Indus Synchromesh file trying to get it to run Ultraspeed with the disk
based versions of SpartaDos. We had it working, but not reliably. It
would not work with the Synchromesh II with the 64K RAM buffer either.
That was one of my biggest disappointments with my 8-bit hacking.

The Indus drives were by far the most reliable in terms of reading
disks. Rana's were the worst!

> have EVER made.

One of the reasons I originally bought my Indus was because of the promise of the Synchromesh high-speed mode. It wasn't available when I got the drive, but they were supposed to send the Synchromesh software free when it was completed. I paid $350 US for the drive at the end of 1983. Well, it was over year or so when the Sychromesh software finally became available and I ended up having to pay $10 for it. DOS XL wasn't bad, but Spartados outperformed it and DOS XL was never upgraded. I was always frustrated using the Indus with Spartados because it had the high speed capability that I couldn't take advantage of. A friend of mine and I hacked around with the Synchromesh software trying to get it to work with Spartados, but we were never completely successful.

I do have the 64K RAM buffer in my Indus and I have run CPM on it. This was another selling point for the Indus, but by the time it was available, MS-DOS was taking over from CPM. The RAM is used as track buffer with the Synchromesh II driver. It's weird to load files and hear the infamous "beep-beep-beep-" of the sectors laoding and not even have the drive spin up!

Ballblaster didn't have the selection menu for Droids and Time, also it
didn't run as smooth as BallBlazer.

Bye,
Thomas

3837. ADVERTISE TO OVER 100 MILLION PEOPLE FOR FREE!!!

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-23 00:00:00 UTC
From: nejeh@gdi.net
Message-ID: <5jm9sq$65g@news.gdi.net>
Source record: 73481

Please take the time out to read this email. it is worth your time.

ADVERTISE TO OVER 100 MILLION PEOPLE FOR FREE!!!
Or send a message to millions of people...

NOW YOU CAN ADVERTISE FREE AND GET DRAMATICALLY
MORE RESPONSES THAN ADVERTISING ON NATIONAL TELEVISION

With E-mail your potential customer is forced to read at least the
headline of your letter. Unlike TV, magazines, newspaper ads, and
direct mail where more than 99.99% of the recipients will skip right
over your advertisement.

TURNS YOUR COMPUTER INTO A CASH REGISTER: Conservative estimates indicate
well over 100 MILLION people will have E-mail accounts in the next year!
E-Mail Blaster turns your computer into a cash register by giving you FREE,
immediate access to all of them. Do you think some of the more than 100
million people with E-mail addresses would be interested in your products or
services? Even if you don't have your own products or services you can
still make money buy promoting our computer software!!!
You can make money with our new software called E-MAIL BLASTER

Here's how:
* By Using E-Mail To Sell Your Products & Services
* By Using E-Mail To Sell our Computer Software such as: Email Blaster, Web Walker,
Email Lock Box etc.
* By Renting or Selling Your E-mail Addresses
* By Becoming A Distributor for e-mail BLASTER

MUCH FASTER: With bulk E-mail you get responses back in 1 to 4
days instead of waiting weeks or months like with television or print
advertising. You can begin filling orders the same day you send E-mail.

FREE ADVERTISING WORTH MILLIONS: It costs millions of dollars to mail out
millions of letters using the United States Postal Service! Now you can
send your ad to MILLIONS of people for FREE using E-Mail BLASTER

E-MAIL BLASTER IS ACTUALLY 3 PROGRAMS IN 1: E-Mail Blaster is amazing new
technology and the most advanced bulk E-mail software on the market today.
(1) E-Mail BLASTER automatically extracts E-mail addresses from America
Online, CompuServe, Prodigy, and the other online services, the Internet,
web pages, news groups, and hundreds of other sources. (2) E-Mail BLASTER
automatically stores the E-mail addresses in your computer along with
keywords that describe hobbies and interests to created highly targeted
E-mail addresses. (3) E-Mail BLASTER sends your marketing letter or ad to
MILLIONS of targeted E-mail addresses at the push of a single button!

HOW DOES E-MAIL BLASTER WORK? E-Mail Blaster has dozens of special filters to automatically harvest E-mail addresses from major online services such as: America OnLine, Compuserve, Delphi, Genie, and of course the internet.

AOL AUTO EXTRACTOR: E-Mail Blaster has many special features like the AOL Auto Extractor that let's you use a regular dial-up Internet connection to collect names and addresses from America Online. Collect America Online addresses without being a member. Allows you to download names and addresses from America Online without paying membership fees or online charges. Auto Extractor for all of the online services and Special E-mail database search engines will also be available at no additional charge.

SIMPLE TO USE: E-Mail Blaster does all the work for you. Unlike other programs where you must cut & paste addresses, E-Mail Blaster does it for you automatically. And, unlike other E-mail programs, with E-Mail Blaster there is no need to purchase any additional software

SPEED: Your time is important. E-MAIL Blaster is DRAMATICALLY FASTER at extracting and sending E-mails than all the other programs on the market that we tested it against.

NO SPECIAL EQUIPMENT NEEDED: E-Mail Blaster runs on a PC with Windows 3.xx Windows 95, Windows NT, a 386 or faster processor, 4 MB RAM, and a hard drive with at least 10 MB free and your own SLIP or PPP connection. No other software needed. Also runs on a Macintosh with Soft Windows installed.

****
This message was sent using E-Mail Blaster.

E-Mail Blaster is The World's Leading Bulk E-mail software.
With E-Mail Blaster you can advertise to over 100 million people for FREE!

Cost: We are giving away Email Blaster your only cost is $165.00 License fee.

THAT'S IT!!!

Our company is in the software business of developing cutting edge products, so we know if you have the opportunity to use our software FREE you will be our future customers. We know we need you to make our software business a true success!

(Please if our lists are incorrect put "remove" in the subject and just hit "REPLY" and you will not be bothered again. Please forgive our mistake).

Hi,
I'm a junior high special ed. teacher who uses a group of ataris for word processing with my students. I'm looking for a communications program for an 800xl, 1200xl, or 65xe which I could use to do a null modem hook up with a mac for better looking final copies and mini publishing. Can anyone help?

Please reply to little@pacific.net Thanks

Command-line DOS 1.0 would be either Sparta or DOS XL (though I never
heard of Sparta 1.0 being released... I had 1.1)

What he's talking about is Atari DOS 1.0, which is a menu driven DOS
like Atari DOS 2.0 (but with lots of bugs and problems)

I dunno--I've played it probably over a hundred times and I've finished
the game at least a dozen or so times.

Never seen it give me so many free guys.

My vote is for bug/glitch, rather than secret.

Dave's Midnight Magic I haven't tried on XL-it yet... but if it's a bad
file & not an XL-it problem I might be able to find it in my pile of
Atari disks (though it will take a WHILE) and upload a new copy to
Yogi's

> Wonderful! Thank you! Anything you find will be greatly
> appreciated!!

OK, looking at the drive as I post this... the RAM chips are
piggybacked... the part # is MCM6810P... hmm.. how to describe it... OK,
pins #11 and 15 on the top chip are bent out, all the others are
directly connected to the bottom chip.. pin #11 on the top chip is
jumpered to pin #13 (both chips), and pin #15 on the top chip is
jumpered to pin #11 on the bottom chip... make any sense?

I'm counting pin numbers clockwise, starting with the upper left corner
of the chip if you are looking at the top of it, with the label right
side up (and there's a dot on the left hand side...) I can't remember if
this is the proper convention for pin numbers (i.e. pin 1 might be the
lower left, not the upper left) but if you number the pins like this:

1 2 3 4 5 6 7 8 9 10 11 12
(top)

24 23 22 21 20 19 18 17 16 15 14 13
(bottom)

then the pin numbers I have given are correct

...as for the ROM, I can't even tell you the part #, since it's an EPROM
with a piece of black tape to cover the erase window (and that EPROM is
probably the part that died on this drive, too, since the mechanism
seems OK & works in my other 1050)

I remember hearing of such a thing, but to my knowledge it never existed
(not in the US anyway)

3844. Atari equipment must sell!!!!!!!

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-23 00:00:00 UTC
From: terry.ortman@mustang.com
Message-ID: <861856247@mustang.com>
Source record: 73488

cc: comp.sys.atari.8bit@brushtail.hna.com.au
cc: comp.sys.atari.8bit@myriad.alias.net
cc: no.comp.sys.atari.8bit@news.uninett.no

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $50.00 or best offer. These SELL AT Video 61 for $49.95 used.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $90.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $55.00.

Both ATR8000 and Dual Disk Drives, $125.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them. Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00. These sell at Video 61 for $74.95, same price.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package. These

are not currently available anywhere else that I know of.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for $59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual, Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

ATARI RELATED MAGAZINES, Found this unopened box that I had boxed up for a person, but then he never sent the order in:

ATARI EXPLORER, February 1985, Cover Price $3.00
ATARI EXPLORER, April/May 1985, Cover Price $3.00
ATARI EXPLORER, Summer 1995, Cover Price $3.00, $3.95 Canadian
ATARI EXPLORER, Winter 1986, Cover Price $3/$3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Sept/Oct 1986, Cover Price $2.95 $3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Nov/Dec 1986, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Spring 1987, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Summer 1986, Cover Price $2.95 $3.95 In Canada

The Above Magazines are in good/fair confition. They are from the same collection the above 1027, 1050, are from, the previous owner suffered a stroke and asked me to dispose of these for him, as he has moved, and I am asking FAIR MARKET VALUE, as can be seen from the prices sent to me by Video 61, who seem to use the Internet and stocks and sells Atari equipment, Video 61 may send me an offer on these then, as I need the cash.

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE BADLY someone has to have one, or a trak double-sided slave drive. MAKE OFFERS!!

As Per US Code, Title 47, Chapter 5, Subchapter II 227
Unsolicited commercial advertising is NOT Welcome here

3845. US Doubler ROM Code -- or something like it?

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-23 00:00:00 UTC
From: robindhood@geocities.com
Message-ID: <335d6499.641578@news.mindspring.com>
Source record: 73560

Does anyone have either the original US doubler rom code or better yet -- has someone come up with their own homemade version? I'd like to burn a couple of ROMs for my 1050s. Of course, I'll have to find the wierd RAM chips for the drives, but that's a different matter all together..

By the way.. Please don't think that I'm some sort of horrible pirate for asking for ROM code here. I've contacted ICD Inc. (Yes, they're still around -- but I didn't ask what they were still making..) and talked to the one person who still knew what an Atari 8-bit is.. He said he thought he had a set around that he would box up and e-mail me a price on. That was six months ago and I never heard from them again.. I've sent several follow-up messages too and gotten no response. I also check with TOAD Computers every so often to see if they've come across any doublers, Happy 1050's, Duplicators, etc.. So let me say this:

>>> IF <<< you have a set of doublers or a Happy 1050 or a Duplicator that you want to sell, I'll entertain ANY "I want $xx.xx" offers posted here or e-mailed to: robinhood@iname.com

You can also feel free to write me if you know of a place that I can call / http, etc. to buy a legit ver. of ANY of these. I'd appreciate any help!!

However in the event that I can't find them, does anyone have / know where I might find the ROM code? I've got to dig out my SAMS Schematics on the 1050 to find out what RAM chip I need to replace and with what as well..

Thanks in advance.
-Da Hood-

3846. TRADE: 2600,5200,TI99,Atari8,Studio2,SMS,Intv,other stuff

I have a bunch of random stuff for trade (or possible sale, but I prefer trades.) My wanted list is at the end of this post.

*** Items for Trade ***
Atari 2600-----
Cosmic Swarm (rare)
Blackjack (rare)
Rampage (rare)
Othello (rare)
Oink! (rare)
Pitfall II (rare)
Dragster (uncommon)
Kaboom! (uncommon)
Human Cammonball (uncommon)
Realsports Tennis (uncommon)
Starmaster (uncommon)
Casino (uncommon)
Crystal Castles (uncommon)
Chopper Command (uncommon)
M*A*S*H (uncommon)
Flag Capture
E.T.
M-Network Baseball (white label)
Sears Breakaway IV
Math Gran Prix

Atari 5200-----
Star Raiders w/box
Qix w/box
Super Breakout w/box
Countermeasure w/box
Galaxian w/box
Kangaroo w/box
5200 cart catalog

Atari 7800-----
Winter Games

Lynx-----
Gauntlet II

TI 99/4A-----
Facemaker
Touch Typing Tutor
Personal Record Keeping

Blasto
Disk Manager 2 (2)
Music Maker
Personal Real Estate
Terminal Emulator 2 (2)
Adventure
Microsoft Multiplan
TI-Writer

RCA Studio 2-----
Console, no power supply. Untested
Math Fun w/inst
Tennis/Squash
Fun with Numbers w/box & inst
Biorythm w/box

Atari 8-bit-----
1200XL unit
XEGS unit w/ light gun, bug hunt & matching joystick
Atari paddles
410 Recorders
1020 plotter
1025 printer
Defender cart
Command Control joystick

Intellivision-----
Sea Battle
Golf (2, 1 with box)
Space Battle
Baseball
Bowling
Basketball

Sega Master System-----
Alex Kidd in Miracle World
Great Baseball
Black Belt
Action Fighter
Out Run

*** Wanted items ***
Atari ST power supply
Atari ST <--> Floppy Disk cable
Atari ST Mouse
Atari ST TOS & software (copies ok)
Atari ST <--> Hard Drive cable
Aquarius Mini-Expander/carts
Intellivision carts
Colecovesion unit
Commodore 128/plus-4 power supply
Atari 8-bit, 7800, 5200 carts

Atari 5200 controller
Fairchild carts 7, 8, 11, 15, 19-26

-The Unknown Cart??? it's Atari, its 5200, its official, it's 1986.
-It's licensed from Centuri. It's got a red spaceship in the
foreground
-shooting at 3 green space ships in the background. But there is no
-title on the label. Somebody tell me what this is please???
-

Sounds like a last starfighter proto cart to me.
Centuri is a character in that movie, not from the game maker.

That reminds me.....I remember once while playing Spelunker on the
Pyramid (I think that's the name) level, I did something by accident
(don't remember exactly what it was) and got something like 20 or 25
free lives. (Still didn't finish teh game, tho....)
Has this happened to anybody else, and was this like a bug in the game
or an actual secret thing that you could do?

>I wrote a video poker game and a 256-colour drawing program in Basic XE...
>I wonder if the disks are still readable.... if not I'll have to dig out
>the source code and start typing if I ever want to use them again :)

Everything has been on tapes and disks untouched for about 10 years.
I was good about printing listings, so I can always type it all in
again.

I have a 48K Atari 400 for games. A stock 800XL, and an 800XL with
the Newell 256K RAM and the Newell OS, and an XF551 floppy. Got three
tape drives, only one works.

>What games did you do?

I started going through the Creative Computer's A-Z book of games and
porting the games to run on BASIC/XL and then crammed all the
gratuitous graphics I could into it. (Even skipping all the useless
games that were only exercises in random number generation, I still
didn't get out of the A's in that book ;-)

Did the Awari game, did a card game (nice cards in a redefined
character set, too). I did a spacewar, and then discovered that when
anyone shot at anything the game ran too slow to be useful. So, I
took out the shooting and it became a game of keep away with geometric
asteroids bouncing around. I took that 3D wire-frame plotting program
printed in Analog and modified it to do solid surfaces (triangles).

I was the kiss of death to every Atari magazine. A month or two after
I submitted one of these programs for publication, it would be
rejected and the magazine folded. Happened with ANTIC, Analog, etc.

I started development on a super library of stuff for assembly. I was
basically taking all the asm libraries I had collected and optimizing
them by hand into one package. I was doing pretty good too. And then
the Amiga came out ;-)

>I assume stuff written in Basic XL should run ok in
>Basic XE??

They should.... A lot of my stuff used the MOVE command which seemed
to have problems on regular XL machines. (Fine on my Atari 800)
Loading the translator or using the Newell OS on the XL fixed that.
Some kinda conflict in the way Basic XL and the XL OS uses
something in page zero.

>Is there a Basic XE image that can be used with any of the emulators?? That
>would be cool :)

I recall there was a run-time for Basic/XL Not sure about XE.

I have a couple of US doubler 1050's lying around, but don't particularly want to sell them... one is a "pirated" version (not sure if it's pirated ICD code or homebrew), which works as well as the "real" one.. If I had some way of reading the ROM I would have no moral problems sending you a copy of the dump, but I have no idea how to do this.. I can, however, find out what part numbers you need for the RAM chip (if I remember correctly you just get another of the same 128-byte RAM that's in there and piggyback the two, but certain pins you don't connect and other ones you connect elsewhere on the board.. will look later & post what I found)

Body handling: Inline uuencoded payload not displayed: sidload.atr

Hi all!

Minor update of SID-LOAD, my utility which allows easy loading of
games stored on your PC harddisk from the XL-IT emulator.

* Fix: entering a wrong filename doesn't prevent the loading of
correct files thereafter any more. Instead, it produces the 'error
sound' ascii 253 (in XL/XE mode) and asks for another filename.

* Fix: failures coming from bad images will not make SID-LOAD attempt
to restart itself (which often fails); instead it will now try to
start the game (though this may fail too). At least now, If you see
the SID-LOAD opening screen, you'll know it's ok!

* Improvement: loader memory has been reduced to only 164 bytes of
memory, meaning more games will load. (for the technically inclined:
only $480-$524 are in use by the loader program now).

Here she is: somewhat bigger, but a lot better!

Please let me hear what you think of it. If there are people actually
using this, I want to know! I'm thinking of adding an option to show
game file names - and I'd like to hear from you what other
improvements could be made!

Regards,
Sidney Cadot

I have just started collecting old video game systems again. I have an Atari XE computer I have been buying games for. I also am buying 5200 games & a system for a friend of mine, but I am tempted to buy one also(a 5200). With all the problems of the famous 5200 joysticks, would I be better off just buying games for the atari XE? Are most of the Atari 5200 games available on the XL-XE's also?? I know that some of them are.

---------------------------------------------------------------
Atari 2600 items/8-bit Auction #4
---------------------------------------------------------------
Hi Everyone. Here is my listing and a few simple rules:
Feel free to bid on any item(s).
Buyer pays post office shipping from Canada.
All prices in USD. Canadians can pay in equivalent $CDN.
I will keep you posted on the current high bid(s).
All items are in good working condition(unless noted)
but sold AS IS.
Bidders must supply full name, address, and phone number.
Tentative end of auction is 11 PM CST April 30, 1997.

NOTE: Preference will be given to someone who bids on a majority of
the items. Amount for bulk bids must exceed combined bids.

I reserve the right to sell cartridges separately.
This will result in the min. bid on that cartridge(s)
being subtracted from the bulk bid.

The Double-Ender will only be sold separately and should not be
included in a bulk bid.

Thanks.
David

Perhaps there should be a section in the c.s.a.FAQ for LucasArts games......

Basically, AFAIK, Behind Jaggi Lines doesn't draw the screen properly on XLit,
but you CAN use the keys, and RoF draws perfectly, but you CAN'T use the
keys......

Look at the differences in the cartridges. You may find that one kind has
a longer lip of plastic than the others, and may need to cut it.

3865. Getting SID-LOAD via the WWW

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-24 00:00:00 UTC
From: sidney@ch.twi.tudelft.nl
Message-ID: <335f79c1.845274@news.tudelft.nl>
Source record: 73496

If your newsreader software can't figure out inline UU-encoded stuff,
and you still would like to get SID-LOAD, you may want to try

http://ch.twi.tudelft.nl/~sidney/atari/atari.html

...which is a part of my homepage which has some Atari stuff I wrote
(as well as a definitely *beautiful* color scheme which readers of
this news-group should be able to recognise).

You can get the utility by using the right mouse button from within
Netscape while the pointer is over the SID-LOAD link.

I will upload it there, as well as some utilities to repair broken
binaries which I promised to upload earlier on.

Bye,
Sidney

Source record: 73497

hallo markus...

i dont know if we spoke about the new "hip-mode" which
depends on a gtia-bug... i dont know if there
is any existing xl-emulator which handles this mode
correct... (btw. how does xl-it handle interlace-pictures?)

FOR ALL Emulator-coders:

gr.9/gr.11 are mostly the same (i mean the positions of
the pixels...)

gr.10-pixels ARE SHIFTED 1/2 gr.10 pixel (which means a gr.15-pixel)
to the RIGHT/LEFT !!!!!!

for more informations read the hip-faq

bye heaven/taquart

ps. this effect is not noticable if you are watching a whole
gr.10-picture... but it is IMPORTANT if you mix gr9/gr10 lines
every scanline!

3867. XLIT and JAGGI LINES - Help please

Newsgroup: comp.sys.atari.8bit

It really depends on how much you want a 5200. The 5200 versions of some games are better and there are some games that were released for the 5200 but not for the 8-bit computers. On the other hand, since the hardware of the 5200 is virtually identical to the computers, many of the 5200 games have been "ported" to the computers. Check the archives. There are some snags since the controls are different. I remember this being a particular problem with Xevious, since the version I had just continually dropped bombs. (The compromise on the 7800 version using a standard 1-button joystick is much better; it drops a bomb when you fire if there isn't a bomb dropping already.)

I personally collect only 8-bit computer and 2600/7800 stuff. Started on the 2600 because I got bored not finding enough computer stuff, and moved up to a 7800 pretty quickly (it plays virtually all 2600 carts).

I've never *seen* working 5200 joysticks. :)

3872. what is an Atari 850?

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-24 00:00:00 UTC
From: marty paulin <b1twkl88@smtp1.sympatico.ca>
Message-ID: <335FEE88.7FE4@smtp1.sympatico.ca>
Source record: 73503

I found a rather interesting Atari item in the local Goodwill Store for
$1.50 CDN. It is a small book sized plastic box with an Atari sticker
that says ATARI 850. It seems to have 2 of the Atari 13 pin I/O ports
that are for the 8-bits, as well it has along 1 edge a Db15 female
labelled Parallel Interface, and along the other edge 4 Db9 ports
(female)
labelled Serial Interface, and a power input socket and pwr switch.

Can anyone tell me what it was used for (I have 2 130XE's, 2 800's,
4 1050 disk drives, a 1027 printer, joysticks etc)?
As well, what voltage and pwr type does it require...? (AC or DC &
voltage)?

e-mail to md.paulin@resonet.com would be appreciated....

->out how to get established in the game without getting killed almost
->immediately.

That is the HARDEST part of the game. The only solution is to SAVE the game very often. Even when you first start, save the game straight away, make a backup of the character disk, and load it again. After this, save the game whenever you gain something, even if it's just a few copper pieces (it all adds up). and MAKE SURE to BACK UP the character disk after saving it. This is a very tedious task I know..... I spent years trying to build up a decent character, which I still have the disk for, and a number of backup disks too. Even tho I haven't really played the game for some time now, I still make sure that my character disk hasn't bitten the dust, cause I ain't gonna try to start another :)

Oh, about getting thrown out of the shop, maybe hes closed for the night? or he just doesn't like you. I remember getting chucked out after trying to barter him without having any money, and he remembered me after that too.... every time I went into the shop. So, you just hafta try not to do something that could make anyone angry.

Good luck..

I have over 2500 videogames for sale.

NES
SNES
Sega Genesis
Sega Saturn
Sega CD
Sony Playstation
Gameboy
Gamegear
Neo Geo
Jaguar
Atari 2600
Atari Lynx
Nintendo 64

For a specific game, E-mail me. Maybe I'll have it.

I am interested in your program but my internet provider chokes when people post files directly into the message base. Could it be possible to ATTACH the file to your message instead of posting it directly into the message base? Or send it to me as an attachment in e-mail? Right now I have no way of ripping out your *.atr file that is embedded in a message base... if there is a way, (and there probably is) I don't know of it.

Really? I used them quite a bit, and they never gave me trouble. I once trashed an Indus drive, when I replaced a transistor, and did it wrong. Smoke City. From then on, both Indus drives refused to work well.

Now the 1050s were great as well. I even tried getting an Astra and Percom, but never got the chance to do so.

I think showing the game names would be cool, if it didn't make the
program too big... If you could make it look like Fenders (disk title in
GR.2 at top of screen, game names in Gr.1, with A thru whatever letter
in front of them in a diff. color, you press that letter to load that
game) I'd be impressed... of course fenders didn't support more games
than fit on the screen.. maybe space bar could show the next page...
like Yogi's loader...

When we first got our 800 years back (1981, I think), it came with an
810 disk drive but what was weird was that if we formatted a bunch of
disks consecutively, the drive would stop working. It would spin up
but wouldn't read any disks. But strangely enough sometimes after a
few days or if we just left a boot disk in the drive attempting to
boot it (it would make awful crunching noises), it would all of a
sudden start working again. This happened a couple of times, until
the last time when it stopped working and never fixed itself.....

Well, it exists in my Indus! Although I do have to admit that
I've only seen two of them in my life. It's basically just a 64K RAM
board that plugs into the header on the right side of the Indus circuit
board. The software sets up the Atari as a terminal and runs CP/M off the
Z-80 processor and 64K RAM in the drive. Clever, but unfortunately it
came out too late to be a big seller.

>
In Ballblazer, the winner screen is normal while the opponents screen goes
berzerk with motion and color. In Ballblaster, nothing happens. The music
cues up and both people can chase after a dead ball (you can't grab it but you
can push it around).

Who ever has possession of the ball, in Ballblazer, has a flashing windshield.
In Ballblaster, it's just a solid color.

Also when you score in Ballblazer, the screen flashes color indicating a
score. In Ballblaster, it's just by sound.

I think there's a couple more that I'm forgetting...

That isn't possible yet. I guess those stars are colored with some
player/missile technique. The p/m is almost perfect in XLIT, but there are
still any bugs. This is one of these bugs I guess.

If I had a SDX cart, I could probably hack the routines out of it... if
I could still remember how (it's been a LONG time!)... even a dump of
the cart would work for that purpose, assuming all the banks were
there... anybody?

> The Indus drives were by far the most reliable in terms of reading
> disks. Rana's were the worst!

I agree... the Indus has outlasted both of my USD 1050's.. though the
810 is still going strong (it's the workhorse drive... but then it was
practically new in the box when I got it last year, so it's expected to
live a long time)

Never had a Rana, though I used to use SmartDOS, which was "copyright
1986 RANA Systems"

These are Atari 8-bit binary executables.. You will either need an Atari computer & a way to transfer them to Atari disks, or else an emulator such as XL-It (best one IMHO)... the URL for XL-it is http://myst.slcc.edu/~markus/

lets see if this works..

http://myst.slcc.edu/~markus/

If I did that right you should be able to click there & go straight to the site (I dunno, I just now learned HTML)

Digital joysticks for the Amiga (and I assume the Atari ST) are pinned
out the same s the atari sticks.

There may be problems with extra buttons on the joystick which I think
use resistors on the pot lines, but otherwise, Atari 8-bit <-> Amiga
joysticks are the same thing. (Remember the same guy did the custom
hardware in both machines.)

Hi,

first of all: thanks for the feedback! Though I'm rather curious to know whether you tried SID-LOAD yet - you didn't actually mention that!

>I think showing the game names would be cool, if it didn't make the
>program too big...

As Dr. Ruth says -- "size is not important".

Maybe the program would get 200 or 300 bytes longer, but the beauty of it all is that the actual 'loader portion' doesn't need to get larger -- in fact in will only get smaller once I start optimizing it... And the loader is all that will have to remain not-overwritten while a program loads. (At the moment, some games _do_ conflict with SIDLOAD, but I'm thinking of fixing that -- by actually relocating the loader when a segment tries to overwrite it, or something like that)

> If you could make it look like Fenders (disk title in
>GR.2 at top of screen, game names in Gr.1, with A thru whatever letter
>in front of them in a diff. color, you press that letter to load that
>game) I'd be impressed... of course fenders didn't support more games
>than fit on the screen.. maybe space bar could show the next page...
>like Yogi's loader...

The problem with this is, that I myself actually like to have all 1200 or so games I have available from within the same PC directory, and considering that this solution would be quite unworkable; one would have to push the space bar something like 60 times before being able to load zaxxon!

The best I could do (if I can get it up to speed) is that you'd see, as you type a filename, a list of all files which start with the name you have entered; it would be possible to have something like "game name completion" (a la 4dos or modern unix shells)

I'll think about this. If you have any ideas, let me know!

Regards,
Sidney

3904. Anouncing BINTRIM 1.0.1: a package to repair broken Atari binary executables

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-26 00:00:00 UTC
From: sidney@ch.twi.tudelft.nl
Message-ID: <336199e3.1709964@news.tudelft.nl>
Source record: 73385

Hi all,

I have written two utilities which could help to repair (most)
broken 8-bit binary executables (like the ones found on Yogis FTP
site). The package is called BINTRIM.

BIN is a utility which shows the structure of an Atari binary
executable; often, bytes have been appended to it in the
transfer-process to the PC. These show up when using BIN as weird
excess segments or 'bad headers'

TRIM is a utility which helps to easily cut off the excess bytes.

Source code and an example repair (Microsoft Marketing Department
would call this an on-the-fly turn-key walkthrough wizard) have been
included; probably _some_ idea of what you're doing is needed to
prevent mistakes.

If your favourite game doesn't run on XL-It or another emulator, give
BINTRIM a try! It might just help...

The BINTRIM package version 1.0.1 is available from my homepage:

http://ch.twi.tudelft.nl/~sidney/atari/

Size: something like 80 KB.

While you're there: please take a look at SID-LOAD and ROMCRC-32
(for the Atari 8-bit ROM Documentation project).

Greetings,
Sidney Cadot

No, the 64K board was an add-on that came out after Synchromesh,
but it was planned in the original Indus design. You need Synchromesh
II to use it as a track buffer. As I've said, I've only actually seen two
Indus drives that had it installed.

3909. Where can I find a used pair of working Joysticks????

Greg Miller (uglmiller@cc.memphis.edu) wrote:

: Um, is this a serious post or a joke?

It's a serious post, all right. However, the guy is selling them for prices you've only seen in the late 80s. If he sold them for around $200-250 for the entire package, then good. He overprices everything. He's had this reputation for not even bothering to send out what you ordered, and has been raided by the Illinois State Police for a few things. I don't have the full info, but it's around the net somewhere. Just ask in some of the misc.forsale groups, and you'll get horror stories galore.

```
-------------------------------------------------------------
Atari 2600 items/8-bit Auction #4
-------------------------------------------------------------
Hi Everyone. Here is my listing and a few simple rules:
Feel free to bid on any item(s).
Buyer pays post office shipping from Canada.
All prices in USD. Canadians can pay in equivalent $CDN.
I will keep you posted on the current high bid(s).
All items are in good working condition(unless noted)
but sold AS IS.
Bidders must supply full name, address, and phone number.
Tentative end of auction is 11 PM CST April 30, 1997.

NOTE: Preference will be given to someone who bids on a majority of
the items. Amount for bulk bids must exceed combined bids.

I reserve the right to sell cartridges separately.
This will result in the min. bid on that cartridge(s)
being subtracted from the bulk bid.

The Double-Ender will only be sold separately and should not be
included in a bulk bid.

Thanks.
David
-------------------------------------------------------------------------
-------------------------------------------------------------------------
Here are the complete details of the system(no box, no docs).
-------------------------------------------------------------------------
Atari CX-2600 Jr.(black with silver trim) $15 <min> $9 ADebater
4 switch model with power adapter (Part of Bulk Bid)
channel selector, separate RF cable
Pair of Joysticks.
Combat cartridge.
-------------------------------------------------------------------------
Cartridges(Atari 2600)
-------------------------------------------------------------------------
Activision(worn end labels)
----------
Frostbite $2 <min>
Grand Prix $2 <min> $2 ADebater
Keystone Kapers $2 <min>
Oink! $2 <min> $2 writer
Pitfall! $2 <min> $2 ADebater
```

Atari

Asteroids $1 <min> $3 bensonj
Berzerk $1 <min> $1 ADebater
Centipede $1 <min>
Defender $1 <min> $1 ADebater
E.T. $1 <min> $1 ADebater
Mario Bros. $2 <min> $2 ADebater
Missile Command $1 <min> $1 ADebater
PAC-MAN $1 <min> $1 ADebater
Real Sports Football $1 <min> $1 ADebater
Space Invaders $1 <min> $1 ADebater
Star Raiders $1 <min> $1 ADebater
Sword Quest: Earthworld $1 <min> $1 ADebater
Yar's Revenge $1 <min> $1 ADebater

Coleco

Donkey Kong $2 <min> $2 ADebater

M-Network

Astroblast $1 <min> $1 ADebater
Space Attack $1 <min> $1 ADebater
Tron Deadly Discs $1 <min> $1 ADebater

XONOX

Robin Hood/Sir Lancelot DOUBLE ENDER $7 <min> $40 AVE

Atari 8-bit Cartridge(metal/plastic casing)

Asteroids $3 <min>
Basic $3 <min>
PAC-MAN $3 <min>

I also have Atari ST 16/32 bit MIDI Computer hardware/software for sale.
Also some IBM hardware/software. Please email for a listing. Thanks.

3912. JOINT MEETING -- LIAUG & OHAUG

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-26 00:00:00 UTC
From: Alan Sharkis <ASharkis@postoffice.worldnet.att.net>
Message-ID: <33625D1D.1851@postoffice.worldnet.att.net>
Source record: 73393

On Saturday, May 3rd, 1997, the Long Island Atari User Group and the Ol' Hackers Atari User Group are going to have the second in a series of joint meetings planned for this year. OHAUG is an exclusively 8-bit group and LIAUG supports all Atari products.

The meeting will be held from 12:00 Noon to 4:00 PM at the Nesconsett Branch of the Smithtown Public Library in Suffolk County, Long Island, NY. We expect to have an interesting meeting, with perhaps a few major 8-bit collectors present.

If you need directions, you may contact me via E-mail:

ASharkis@worldnet.att.net
or
ASharkis@aol.com

or call The New Nest BBS at
(516) 783-4634
and leave a message for sysop Patrick Mulvey.

Speaking of CP/M, I managed to get ahold of an ATR8000 with a dual
tandon 5.25" drive, and tonnes of CP/M software.. Does anyone know how
to run them using the atari through the ATR8000?

I have the ICD USDoubler ROM in a 4KB file that I have used to program
my two USD 1050's.. The only thing that you need that is really hard to
find, is the extra ram chip! It is the same as the one that is in it
now, you just need another and because they are extinct, the only real
way to upgrade it is to take the ram chip from another dead 1050..

Somewhere along this thread I lost track of who is saying what, but from my understanding, Ballblaster was actually developed by another company independant of Lucusgames and actually saw a limited commercial release before Lucus and company snatched it up and re-invented it as Ballblazer.

And while we're one the subject of Lucusfilm Games, I recently played Maniac Mansion on my PC and the whole game looks like it was developed for an Atari. The graphics and the gameplay are extremely Atari-like. I'm speculating that the game may have been developed on an Atari and then ported to the PC when the Atari market crashed.

Sure you can. You'll need to get hold of an Atari 850, or P:R:Connection,
to give you an RS232 port. Obviously, you'll need software to drive it
all, too.

Ballblazer.

Atari had IMHO a contract with Lucasgames for four Games. These Games
were: "Ballblazer", "The Eidolon", "Rescue on Fractalus" and a fourth
one.

They developed them, but a beta version from "Ballblazer" and "Rescue on
=46ractalus" were pirated and before the full games could be released,
nearly every 8Bit-Atari-User had a copy of "Ballblaster" and "Behind
Jaggi Lines". This was the last Soft from Lucasgames for the Atari.

It was written for the C64, but never for Atari 8Bit because of the
other story.

So long,

It *may* be a port from the NES. My son has this game for that system.
A lot of the NES games have an Atari sort of look about them. When the
NES was the "system to have" I convinced him to get an XEGS. The next
year he got the NES 'cause that's what "everyone else" had. However,
he *did* get "cool points" from his buddies since he had a computer.

3928. FS: Atari Jaguar, games and stuff

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-27 00:00:00 UTC
From: sunlord@ican.net
Message-ID: <3363a81e.108231090@news.ican.net>
Source record: 73409

As some of you already know, later this year I will be attending an exchange program in Japan. Ufortunatley, this means I ahve to get rid of allot of stuff! I have a number of Atari 2600's, and Jaguars. I have decided that I should probably part with my secondary Jaguar. Beloew is everything that I have for it. Please ask if you would like any references to other people I have sent the odd thing to, and please e-mail me with a reasonable offer. I am not here to make a profit... jsut to get back some of what I spent and give the equipment to someone who will use it for a long time, rather then just dumping it the next day! So ... here goes:

(this will probably go to someone who is getting their first Jaguar, or a secondary system for themselves/family... I am selling this as a set!)

---

1 x Atari Jaguar (mint condition, Box is perfect, manuals, power source, tv hookup)

4 x Atari Jaguar Standard controllers with original packaging in perfect condition.

1 x Team Tap, bought separatley in perfect condition with Box

1 x Alien Vs. Predator (mint condition game, manuals, overlays, box)
1 x Bubsy the Bobcat (mint condition game, manuals and box)
1 x Cybermorph (mint condition, overlays, came with system)
1 x Doom (mint condition, manuals, overlays, and box)
1 x Double Dragon V (mint condition game, manuals, and box)
1 x NBA Jam: TE (mint condition game, manuals and box)
1 x Raiden (mint condition game, manuals and box)
1 x Sensible Soccer (mint condition game, manuals and box)
1 x Tempest 2000 (mint condition game, manuals and box)
1 x Theme Park (mint condition game, manuals and box)
1 x White Men Can't Jump (mint condition game, manuals and box)

No matetr what you think of the Jaguar or the games, I am a person that tries to keep everything in perfect condition. Everything that came with the system, games and controllers are in perfect condition and are their. I bought everything new, and have player it sparsley. Maybe 4 or 5 times. It is my secondary system and eveyrthing is less than 3 months old.

So, if anyone is interested, or knows someone that is, please feel
free to make any reasonable offer to sunlord@ican.net

Thanks allot!
Dave
sunlord@ican.net

3929. Re: ATTN MARKUS: Status bits after H: device CIO not ok.

3930. ANNOUNCING SID-LOAD 1.0.5

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-27 00:00:00 UTC
From: sidney@ch.twi.tudelft.nl
Message-ID: <3363b002.2914595@news.tudelft.nl>
Source record: 73411

Hello all,

SID-LOAD, the utility for loading Atari 8-bit binary executables on
your PC harddisk from within the XL-It emulator, has been upgraded to
version 1.0.5.

It can be got at http://ch.twi.tudelft.nl/~sidney/atari

Changes from [1.0.4] to [1.0.5]:

* Optimizations: some optimization made the loader portion
smaller: from 164 down to 123 bytes. This means all games
not touching $480-$4FF while loading should work; the ones
touching only $500-$57F now have a chance.

* Feature: directory feature; the "BELL" on a wrong filename has
gone; instead, SID-LOAD now tries to interpret the filename
entered as a pattern for a directory listing.

* Fix: COLOR2 (address 710) value is now restored prior to
invoking the loader. The silly thing is: about the only program
hindered by this was my own ROMCRC program! Should work
fine now.

* Fix: better handling of BLOCKSTART>BLOCKEND; in this case,
SID-LOAD now tries to RUN the program (as it does with other
errors).

* Fix: some games (most notably, Asteroids) appear to be rather
picky about system variables being set up properly (DOSVEC).
They work now.

(Never thought it would be possible to have this much bugs in so
little code!)

Regards, Sidney

btw, hip-mode! Can anyone send me a demonstration sample of this mysterious picture format? Are there any good hip viewer and picture-converter?

You need the appropriate software and hardware to run a 14.4K modem on an Atari XE. The Atari XE GS runs all regular Atari 8bit hardware/software, 99% of it any way. I would recommend Bobterm for the software and a Black box or MIO with cables for the modem. They are a little tricky to get now. Either buy them used or maybe try a few of the lone Atari vendors that are scattered throughout north America..

Good luck..

Alan

3934. Atari Connection BBS!

Newsgroup: comp.sys.atari.8bit

I'm proud to announce that I've revived the Atari Connection BBS. A BBS Express Pro! dial-up system for the 8bit Atari computer.

Whats online? Hundreds of meg worth of 8bit Atari files, online games, messages, tips, cartoons and more.

801-280-7486 (300-19.2k)

Not Internet accessible, but will be providing Internet related material online (usenet news, ftp'd files, etc..)

Almost, the stars are a very light light green. They should be
blue-white. And the display should be a blueish - haze shade with shields
on.

The alert when coming out of hyperspace into a battle should be red, not
violet.

The long range scan is also too green. yeck!

Keith

I think it handles them just fine. I got a whole bunch of pornos that you
have to scroll up and down to see the full length photo.. And there's and
annoying (but proper) interlace flicker to 'em. Just like on my amiga in
320x400 interlace mode. :-)
```

3937. Atari chip music format & player

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-27 00:00:00 UTC
From: Robert Hagenstr&#65533;m <rob@ksk.sala.se>
Message-ID: <01bc5344$a6fe5aa0$0e3210c2@t-ballz>
Source record: 73418

Greetings!

I am not well orientated in newsgroups nor the web. However I have found some nifty little win95 proggies that play .dat (c64 sid files) and .ym (atari st chip music) file formats. I am now wondering if there exists or will exist such a program for the Atari 8-bit computer? (And if I will be able to rip music from .xfd or .atr files... my main interest lies in the Alternate Reality games, which I am having problems with, transmitting the music to the general public, as I am a host of it's official webpage at http://www.ksk.sala.se/~rob/dungeon/).

Please answer to me personally also, since I don't get much time over for reading news groups...

Yours Sincerely, Robert Hagenstr&#65533;m

You will also require a disk drive with DOS 2 and the RS232 bootcode.

I have a manual for the interface and can pass on details of what you require of it...

IN THE DARK AGES of COMMAND LINE INTERFACES...

I wrote a BASIC program to transfer data to PC and an ATARI PORTFOLIO, plus it could print files in sections to a single sheet serial printer. I may be able to get the program still but I sold my D.Drive to a colleague at work... He probably doesn't know what it does, and I'm certain he still has it.

drop me a note if you wish.

Richard.

Atari 2600 items/8-bit Auction #4
---------------------------------------------------------------
Hi Everyone. Here is my listing and a few simple rules:
Feel free to bid on any item(s).
Buyer pays post office shipping from Canada.
All prices in USD. Canadians can pay in equivalent $CDN.
I will keep you posted on the current high bid(s).
All items are in good working condition(unless noted)
but sold AS IS.
Bidders must supply full name, address, and phone number.
Tentative end of auction is 11 PM CST April 30, 1997.

NOTE: Preference will be given to someone who bids on a majority of
the items. Amount for bulk bids must exceed combined bids.

I reserve the right to sell cartridges separately.
This will result in the min. bid on that cartridge(s)
being subtracted from the bulk bid.

The Double-Ender will only be sold separately and should not be
included in a bulk bid.

Thanks.
David

The GS does not have a PBI or ECI port to use a Black Box or MIO! You could
use an 850 or PR Connection.

3952. News from the land of APE.

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-28 00:00:00 UTC
From: ai123@FreeNet.Carleton.CA
Message-ID: <5k1l0g$htg@freenet-news.carleton.ca>
Source record: 73337

Hi everyone,

I've sort of been too busy to work on APE alot for the last
few months, and to compute much in general. I apologize to the people
who are waiting for e-mail, updates, etc. All pending stuff will be
taken care of soon :)

I had a few hours of free time for the past few days and I
decided to write some stuff people have been requesting for a long
time.

The most exciting thing is the new APE loader. Its a really cool
boot loader/menu program you start by booting from the PC mirror.

The boot loader is still rough, and will change some, but the
following things are done right now and will show up in 1.15 for registered
users:

a. boot loads directly from the pc mirror
b. totally menu driven, no need to ever type filenames
c. 100% compatible w/ warp+ os for screamin load times
d. reads files directly off the pc mirror, disk images not required
e. traverse drives and subdirectories visually from menu
f. can handle upto 3000 files/subdirectories per directory
(all of jellystone is less than 1500 exe files)
g. total control from the atari keyboard, no need to ever go
to the pc. load file, work subdirectories and drives, etc.
h. zoom to files by starting letters, makes locating any file just
1-2 keystrokes away, even w/ all 1100 jellystone exe files
in the same directory.
i. two stage menu/loader design for tiny memory footprint. Loader
stage is less than 100 bytes and can be relocated by ape anywhere
in atari memory, can even be concealed within the high stack.
j. loads everything that does not smash the loader, and even loads
those files since the loader can be relocated ;) (on menu)
k. works regardless of memory size, cart status, or machine type.
l. displays 36 files/directories per screen, plus menu lines. Already
working on an 18 files + long filenames version.

There is some other stuff i think, but i'm really tired now so that will
have to do till I have time to write a better description.

Eventually the loader will become a subfunction of a larger program
that will allow for total control of APE from the atari. The framework
API is in place so adding it will be pretty easy.

Anyone with ideas for features on the menu program or the control program let me know. :) Also I need a few registered users who are really interested in putting in some time beta testing 1.15, mostly the menu. I really need someone who can spend some time with it and send me bugs, comments, etc. Please e-mail if you want to work ;)

For everyone else 1.15 will be out soon, really! :) I know I promised 1.12 for months, but I just didn't ever have time to commit to working out it's issues till the last few days.

Thanks for your patience everyone.

Steve

ps. If any of you know of 'problem' executable files that dont seem to work with any/most of the disk bootloaders please let me know the filename, I would like to try them out directly. (i just cant try all 1100 files in jellystone :)

pps. how do I generate a different background color on each line of text? Kind of like Alternate Reality does? I know it involves DLI's but its been awhile since I did any stuff like that.

3954. Joint Meeting of OHAUG and LIAUG

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-28 00:00:00 UTC
From: asharkis@aol.com
Message-ID: <19970428114301.HAA27124@ladder01.news.aol.com>
Source record: 73339

If this message (or one like it) already appeared, please accept my apologies. I had posted one previously via AT&T Worldnet, but it hasn't shown up on AOL yet, so I'm posting this one from AOL to cover all possibilities.

The Ol' Hackers AUG, an exclusively 8-bit user group and The Long Island AUG, a group that supports all Atari products are having their second joint meeting on Saturday, May 3rd from 12 noon to 4 PM at the Nesconsett Branch of the Smithtown Public Library in Suffolk County, Long Island, NY. It is expected that some important collectors will attend the meeting.

If you need travel directions, you may send E-Mail to me at:

ASharkis@aol.com

or

ASharkis@worldnet.att.net

or

call The New Nest BBS at (516) 783-4634 and leave a message for sysop Patrick Mulvey.

Thanks for your attention.

>
>
Nevermind! Darek has it posted now. The following is it infor from <A HREF"http://www.emulators.com"> Emulators.com. </A>:

PC Xformer 8-bit Peripheral Cable

In 1988 we designed a special cable to allow ST Xformer users to connect Atari 8-bit disk drives to their Atari ST computers. The same cable, with a minor modification can also be used on your PC for use with PC Xformer.

The cable, pictured here, plugs on one end into an Atari 8-bit disk drive such as an 810, 1050, Rana, Indus GT, or XF551, and on the other end plugs into your ST's or PC's printer port. Other Atari SIO devices, such as the color plotter and dot matrix printer are also supported, so go dig them up out of your closets!

We no longer manufacture the cables ourselves. Atari dealers such as B & C Computervisions and Toad Computers do still make them for about $25.

Or make your own for about $5 in parts. All you need is a one half of a black Atari SIO cable (with the 13-pin connector on one end, bare wires on the other), a DB-25 male connector, and a 4.7K pull up resistor. Of course, a soldering iron and experience with soldering also helps.

The PC Xformer cable pinout is slightly different from the ST Xformer cable pinout. This was due to the fact that pin 1 on the
Centronics port behaves differently on the ST and PC. For that we added a pull up resistor on pin 11. The modified cable is
compatible with the ST, so one cable can work with both PC Xformer and ST Xformer.

DB-25 pin numbers are pretty standard. Data output pins are pins 2 through 9, and the printer busy pin is pin 11. Ground is pin 18.
On the Atari side, I'm going by the pin numbers published in the Atari Technical Reference

Manual. The pins are as follows:

pin 2 - clock out
pin 3 - data in
pin 4 - ground
pin 5 - data out
pin 7 - command
pin 10 - +5 volts

Ok, now the old ST Xformer cable pinout goes like this (Atari DB-13 pins on the left, DB-25 on the right):

pin 2 - clock out - pin 3
pin 3 - data in - pin 11
pin 4 - ground - pin 18
pin 5 - data out - pin 5
pin 7 - command - pin 7
pin 10 - +5 volts - pin 1

For the new PC Xformer cable, you move the +5V line from pin 1 on the DB-25 to any of the unused data output pins (2, 4, 6, 8 or 9).
I chose pin 9 just to keep the spacing of the wires 2 pins apart. Then run the 4.7K pull up resistor from the data in pin (pin 11) to any
of the unused data out pins. I chose pin 2 which gives you lots of room for the resistor.
The new pinout is:

pin 2 - clock out - pin 3
pin 3 - data in - pin 11
pin 4 - ground - pin 18
pin 5 - data out - pin 5
pin 7 - command - pin 7
pin 10 - +5 volts - pin 9

Place the 4.7K pull up resistor between pins 2 and 11 on the DB-25. That's it! Download the PC Xformer 3.6 software and follow the
directions for calibrating and using the cable.

Robert S Ely --- Communications Systems Technician

Two Atari computers - Atari 130XE and Atari 800 - with tons of
accessories:

Atari A/B printer Switch
Touch tablet with software (model CX77)
Numeric Keypad (model CX85)
Cassette Recorder (model 410)
2 standard Joy Sticks
3 'cool' joysticks
2 Interface Cards (model 850) (provides 1 paralleal & 4 serial ports)
1020 Plotter w/ paper
1050 Diks Drive with some chip enhancement
810 disk drive w/ Happy 810
2 joystick paddles
6 interface cables
2 monitor cables (Atari to CGA)
2 Parallel Printer Cables (15 pin -> centronix)
2 Taxon CGA monitors
Indus GT Drive w/ carrying case
Vaious other cables
~300 disks of software (in 5 1/4" case) (some bootleg'ed)
Cartriges: Monkey Wrench, Basic XE, Action, Star raders, Pacman,
M.S. Basic II, Atari Logo, Atari Artist
All manuals (I think) along with the Atari Users magazines from 1983-1988
or so.

The monitors are probablly not worth shipping anywhere, but I'll give
it all up for $100 bux (plus shipping). If you live in the Dallas
area, I'll meet you somewhere with it all. If that price is to high,
let me know... if its to low, you can pay me more if you want! ;)
(I will piece it out, but only if no one takes the whole lot within a
week. Make a fair offer.)

3957. Happy Drive Info Required

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-28 00:00:00 UTC
From: Douglas Campbell <campbell@edrtech.com>
Message-ID: <01bc540d$86466680$22d385a2@dougc>
Source record: 73342

Hello Atarians!

Does anyone here have any information about the Happy drive modification to
the Atari 810 - 1050 drives?
I am interested in any additional SIO commands that are available.

Why do I ask?
Well, a few years ago I made cable that connected the serial port to the
Atari SIO cable (TTL <-> RS232). I used it to archive several hundred
disks worth of Atari software. But there were problems with protected
software. I figure if I could use the Happy to get more information about
the protection on the disk then I could reproduce the result when I tried
to run the game.

I came across XL-IT on the internet, that made me interested in my Atari
again. Am I just wasting my time going in this direction? Can XL-IT run
software that was on protected disks?

Any help would be greatly appreciated!

Thank You,

campbell@edrtech.com

>and so on. Lives would be lost galore here. Then you had the bird that was
>shooting at you. If you shot him, he'd become a star, and come straight
>down to either kill you or miss you.

That section is called The Shaft.

To take care of the bat (not bird) that's dropping...well, dropping
guano at an alarming rate, you can shoot a flare from _anywhere_ on the
screen, and it's _the flare_ that turns into a fireball (it is a flare,
after all) and falls toward you. The bat simply disappears while the
flare is present. So, just walk over to where you don't want to stand,
shoot a flare, then walk back to the edge of the shaft and wait for the
fountain/gondola to come back.

Cake.

Actually, it's the hardest part in the game--much easier all the way up
to the end.

From Mac Gyver (Apr28 14:33):

****Make up to $50,000 in 4 weeks! 100% legal!*****No Scam!!!

MAKE 50, 000 IN 4 WEEKS

THIS SYSTEM WORKS! NOT A SCAM...READ THE TEXT!

This is the fairest, most honest way I have seen to share in the
wealth of the world.! This works so well that all of my friends are
trying it!
Take five minutes to read this and it WILL change your life. If you
want to
know how to make thousands of dollars quickly, and legally with NO
CATCH,
then keep reading.

The internet has grown tremendously. It doublesTake five minutes to
read this and it WILL change your life. If you want to
know how to make thousands of dollars quickly, and legally with NO
CATCH,
then keep reading.

The internet has grown tremendously. It doubles one was calling it a
scam, but there are so many new users from AOL, NETCOM, etc., that
they
will join in and make it work for you.

Well, two weeks after my initial posting of this article, I began
receiving an unprecedented amount of dollars in the mail. I could
not believe my eyes. Not just a little, I mean BIG BUCKS!
At first only a few hundred dollars, then a week later, a couple of
thousand, then the system exploded into thousands of dollars.
By the end of the fourth week, I had received almost $47,000.00. It
came from all over the world, Holland,Germany,England,Australia,Italy,
Russia,India,Bangkok etc.

STEPONE

Invest your $5 by writing your name and address on five separate
sheets of paper along with the words: "PLEASE ADD ME TO YOUR MAILING
LIST." (In this way you are not just sending a dollar bill to
someone,
you are paying for a legitimate service.) Also on each of the sheets
of
paper indicate the number of the person. Fold a $1 bill inside eachONE

Invest your $5 by writing your name and address on five separate
sheets of paper along with the words: "PLEASE ADD ME TO YOUR MAILING
LIST." (In this way you are not just sending a dollar bill to
someone,
you are paying for a legitimate service.) Also on each of the sheets
of
paper indicate the number of the person. Fold a $1 bill inside
eachpiece of paper with your name and address on it.Ensure that when
the
dollar is folded in between the paper and it is held up to light...THE
DOLLAR SHOULD NOT BE VISIBLE!Mail 5 of these letters to the following
5 addresses:
(Only U.S. Dollar Bills should be used,so as to maintain uniformity in
the system)

1) Michel Lemieux
123 Mullins C.P 1179
Bromptonville, QC CANADA
2) Peter Kjoge
Camino de la Condesa 9, 5-A
E-29640 Fuengirola SPAIN

3) Alexander Axelsson
N&#65533;sselgatan 7
262 52 &#65533;ngelholm
SWEDEN

4) Gihara Joza
Goblez sr1287
547 40 Kairo
Egypt

5) Danny Kwak
15. rue du Champs de Mars
75007 Paris France

Step2

Now remove the top name from the list, and move the other names up.
This way , #5 becomes #4 and so on. Put your name as the fifth one
on the list.

STEP 3:

Post the article to at least 250 newsgroups. There are at least
19000 newsgroups at any given moment in time. Try posting to as
many newsgroups as you can. Remember, the more newsgroups you post
to, the greater your audience and cash flow from all these
subscribers.

STEP 4:

You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the Internet is new and

awesome
in its size. There is no way you can lose.

Now here is how and why the system works:

Out of every block of 250 posts I made, I got back 5 responses.
YES! THAT'S RIGHT ONLY 5. You make $5 in cash, not checks or money
orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now will also make 250
additional postings with your name at #4, 1000 postings. On average
then, 50people will send you $1.00 with your name at #4,.....$50.00
in your pocket!
Now these 50 new people will make 250 postings each with your name
at #3 or 10,000 postings. Average return, 500 people = $500.00.
They make 250 postings each with your name at #2 = 1000,000
postings = 5000 returns at $1.00 each = $5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at #1
and you get a return of $50,000 before your name is dropped from
the list. And that's only if everyone down the line makes 250
postings each!! Your total income for this cycle is $50,000.

When you see your name is no longer on the list, you take the latest
posting and start all over again.

The end result depends largely on you.You must follow through and
repost this article everywhere you can think of. The more postings
you make, the more cash ends up in your mail box. It's too easy and
too cheap to pass up!!

So that's it. Pretty simple sounding workingconcept, don't you think?

But believe me, this really works. There are millions of people
surfing
the net every day, all day, all over the world. And 100,000 new
subscribers every day eager to access your newsgroup. You know that,
because you have read the facts in the newspaper and seen for yourself
on TV. So, my dear little 'fortune seeker,' read carefully the
instructions and play fair and square with your endeavors.
Remember, YOU CAN ONLY TAKE OUT WHAT YOU PUT IN!! That's the key to
success in any venture. Print these pages out NOW so that you may
refer
to this article at a later date. Try to keep an eye on all the
postings you made to make sure everyone is playing fairly.
You know where your name should be.

If you're really not sure or still hesitant if this is for real,
then I suggest don't do it. But please print this article and pass
it along to someone who really needs the bucks, and just see for
yourself
how remarkably well this works.

REMEMBER....HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT
THE BASIC IDEA TO MAKE BIG BUCKS!! GOOD LUCK TO ALL, AND PLEASE PLAY
FAIR AND YOU WILL BE MORE THAN GENEROUSLY REWARDED

P.S. If you try to deceive people by posting the messages with
your name in the list and not sending the buck
alreadyincluded, you will not get much. I know someone who did this
and only
got about $150 (and that's after two months.) Then he sent the 5
bills
and was added to their lists. In 4 - 5 weeks, he had in excess of
$10,000.

You can get both at http://www.dejanews.com. I recently posted a complete description of the ATR header (including APE extensions).

There was a thread a few months ago about the various SIO commands in relation to a hard disk project, also try the ATari Technical Manual thats available online. Good start at least.

Source record: 73346

hi everybody,

i am looking for a utility for my atari xl/xe which
can sort the files on a mydos disk or megaimage
in alphabetic order.
does anybody know of such a tool ?
i have disk wizard, but it's just for dos 2.5 compatible
disks and not for use with these huge 1 MB images you
know from jellystone.
as far as I know from dos 2.5 every file on a dos disk
has got a filenumber (stored in every sector which the file uses)
- so if you want to sort the filenames
you have to move the files on the disk around, not just re-
arrange the directory. the same in mydos ?

regards, sven.

Kenneth Jennings (kenneth@daffy.aatech.com) wrote:

: If anything, the post is useful for historical purposes since it posts
: the original prices for the hardware when they were originally
: released. ;-)

Not quite. He's selling a 400 for around $50. It was around that price
about 1985-87. Today, it goes for maybe $10. The ATR mentioned is way too
high, a discount of maybe 65-75% would be better.

A 400 sold for about $260 in 1981. I should know, as I paid that much at
that time. A 1050 was around $150-200, I believe.

He should read what everyone's selling their stuff for, and go for around
those prices. I once emailed him about it, and got toasted to a crisp.

Hi there, I'm just now collecting some Atari stuff and woud appreciate any help you can offer, so far the FAQs have been great but they can't answer everything...

I finally found a Power Supply for an Atari Computer (I have aquired an 800, 1200xl and 1050 all sans Power Supplies). Soooo.. now I was able to plug the buggers in one by one:

The 800, powered up like a champ! Got the Atari FAQs up and determined I have an 800 (48k on board) with a GITA and the BASIC cartridge is Revision A.

The 1200XL is a different matter, Powered up, got the logo, went to diagnostics, sound O.K., Memory looks good, but the keyboard... I can get
the top row (reset,start,select,option, & help) working but the other keys seem dead. The strange thing is I boot up BASIC and I press a letter and the computer responds with it's 'click' sound but no character
(maybe something in the decoding logic???) Any of you old-hack Atarians got a clue??

Since I only have the one power supply I had to power up the 1050 as a standalone, the head did a quick back-fourth motion and the activity light stopped so that seems to be a promising sign. Second request: When I get a second supply I gonna kinda need a disk or two to run on this
thing, can anyone help set me up with some essential disks (DOS, utilities, maybe some common games, etc.) I can trade for some fine classic
Commodore Programs and such. (=))

If anything, the post is useful for historical purposes since it posts
the original prices for the hardware when they were originally
released. ;-)

Ummmm. When shields are on the entire display of space is greenish.
Turn off the shields and space is black with white stars.

from: Richard { niteporter@imailbox.com }

You will also require a disk drive with DOS 2 and the RS232 bootcode.

I have a manual for the interface and can pass on details of what you require of it...

IN THE DARK AGES of COMMAND LINE INTERFACES...

I wrote a BASIC program to transfer data to PC and an ATARI PORTFOLIO, plus it could print files in sections to a single sheet serial printer. I may be able to get the program still but I sold my D.Drive to a colleague at work... He probably doesn't know what it does, and I'm certain he still has it.

drop me a note if you wish.

Richard.

If you have internet access, you might want to try
http://www.emulators.com/index.html, the site for Emulators, Inc.
They provide both 8-bit emulators for the PC and instructions for a
cable that allows you to hook up an Atari 8-bit floppy drive to your
PC. You could then transfer the 8-bit files from the Atari floppy to
your PC's hard drive. You could then either use the emulator to run
AtariWriter to edit or printout these files, or (if AtariWriter does
this, it's been a long time!), use AtariWriter to do ASCII text saves
that then any PC word processor could use.

You reminded me of the time (I used to work a few cublcles from Chris Crawford) when Chris thought he was done with Eastern Front and passed out copies to get beta tested inhouse. He had several "artificial intelligence" routines. The first one was very simple and could complete in a second. The more elaborate ones used idle cpu time (when you were thinking of your move), to plan ahead. A human player could program many moves ahead simply by directing forces several spaces at once.
My strategy was to send all my forces to Moscow on my first move, and simply hold down the start key, and keep it down. The AI had no time to think as my forced plowed their way to Moscow. Chris accused me of cheating.

I thought all was fair in love and war!

Try looking for the SIO2PC .zip at Umich - that's where the .ATR standard
comes from originally.

I have 2 remote control joysticks for sale. Base unit plugs into
the joystick port on the computer/game system and requires a 9V DC
power supply (not included). Each Joystick requires a 9V battery
(included!). The unit is in good condition and works well. Please
e-mail offers to me directly.
Thanks,
Thomas Main

This is a great deal! I'll take everythig for $10,000. Do I get free shipping? Guarantee?

I especially want the modem. I hear that the Atari 300 baud BBS's are all the rage.

I hate this kind of spam. Why don't you just post that you have Atari parts for sale and then e-mail the catalog to whoever cares instead of posting this every week.

I'm sure that there are still novelty collectors out there but you don't need to spam up 10 newsgroups to get your point across.

Sorry if I'm being too cruel...

3984. PCXformer for Win95

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-29 00:00:00 UTC
From: Robert Smith Ely <rely@ix.netcom.com>
Message-ID: <5k4k79$5bb@dfw-ixnews4.ix.netcom.com>
Source record: 73365

Here is a response from Darek Mahocka to e-mail from me about the Windows 95 version of PC Xformer. Hope this helps!

----------Reply starts here----------

From: "Mihocka Darek"
<emulators@msn.com>
Subject: RE: PCXformer for Win95
Create Date: Monday, April 28, 1997 1:32
PM
Send Date: Wednesday, December 31, 1969
8:00 PM
Attach:
Certify: N

For various reasons I won't get into detail here
(but mainly scheduling
related and the fact that Gemulator brings in far
more money than Xformer) I
won't be releasing it as a separate commercial
product. It's being rolled in
to the Gemulator 97 product so that one product
does Atari 8-bit, Atari ST,
and Mac emulation in one product instead of trying
to market 3 separate
products. People who wish to buy a Windows version
of Xformer will be able to
buy Gemulator 97 this summer, or else keep using
the free 3.6 version which I
made freeware simply because I didn't have the
time to keep supporting it as a
commercial product. People who sent in a disk for
an upgrade to Xformer 96
either got a pre-release beta of Xformer sent to
them in November, or their
disk is still here and what they'll get is a
Gemulator 97 disk this summer.

Also, please note that a bunch of the people on
the net who are complaining
about not receiving either Gemulator 96 or Xformer
96 update disks didn't
follow the upgrade instructions - they didn't
respond by Nov. 15th, or they
didn't send back their old disk, or they didn't

include a return disk mailer,
or they didn't put return postage on the mailer,
etc. and those people simply
will not receive an upgrade, no apologies. Maybe
this summer when I have more
free time I'll go through the pile and send those
people upgrades anyway, I
don't know.

The web page should make things clear. If it
doesn't, I'm sorry, but again at
this point you're looking July or August for the
Gemulator 97 release.

- Darek

Darek,
What happened to the Win 95 version of PC
Xformer? I can't find any
reference to it anywhere on you web page anymore.
I'd really like to get
my update as I sent in the v3.0 disk way back in
October ('96). I have
downloaded the 3.6 version and really like it. I
am running it from an
Iomega Zip drive. Works great! I know many who are
curious about the
Win95 version from comp.sys.atari.8bit. Please
make some sort of
statememt in that newsgroup as to the ststus of
this product.
Eagerly waiting...

Howdy

There's a delightful little 1-page article in an old issue of Wired
magazine written by the guy who translated Maniac Mansion to the NES.

Nintendo kept making him revise, edit, and modify the game and conversations
so there could be no hint of semi-adult ambiguities or insinuations. The
fractured English they rcommended for his changes were a riot.

I don't remember the rest of the game in enough detail to comment on the
rest. I have the star raiders cart in storage for sentimental reasons but
I don't have my Atari 800 anymore :-)

larry,

a few months ago i ran into a similar problem..

in this case the board had been exposed to moisture. only the
f-key was functioning.

great if i want an 'f'-letter or a series of 10 in hex.

anyway, i ended up buying a new keyboard from b & c in california.
they charged $25.00 for a new mitsumi keyboard (direct replacement).

i couldn't bear to part with the 1200xl, so i bought one...works
great!!

if you need their address let me know, i'll forward it.

another option is a guy named bob klaas. he has offered in the past to
fix my 1200xl, and is quite reasonable...as well as honest.
don't know what he would charge, might give him a try. he posts quite
abit to this group.

cheers,
robert

Personally, I prefer that people post a list to the newsgroups. It's
just the
repeated posting with little, if any, change. And if you think someone's
posting something
too large, it's generally considered smart to not quote the whole thing.

Well that would explain the "8-bit" look to it. I keep forgetting that Lucasgames made C=64 versions of the the Atari games they made. My original question wasn't if it was released in Atari format, just if it was developed on it then dropped and poted to other platforms. C=64 didn't even come to mind. I just may have to get a C=64 one of these days and bear with it. My first two experiences with it... well, the less said the better.

I have the following games for sale:
Quantities vary from 20 to 400.

Prices are for 1 to 9 $2.00ea. + Shipping & Handling
10 to 20 1.70ea. + S&H
21 to 50 1.50ea. + S&H
51 to 100 1.25ea. + S&H

For Intellivision:

Space Spartan
Tron Deadly Disks
Star Strike
Beauty & the Beast
Astrosmash
Stampede
Space Armada
Dragonfire
Sharp Shot
Space Hawk

For Coleco:

Fraction Fever
Defender
Tournament Tennis (No box or label, new never wrapped)

Centipede (price is $3.00ea. for this game - quantities limited)

Controllers for Coleco original style -
$2.00ea., 5 or more $1.00ea. No boxes, cables are stretched out.

For Atari 2600: (No Quantities)

Asteriods
Astroblast
Space Attack

For Atari 5200:

Pitfall
River Raid

The next 2 games say 2600 on the boxes but are actually for 5200:
Space Shuttle
Zone Ranger (instructions are for the Atari 400)

For Atari 7800: (No Quantities)

Asteriods (Some have no shrink wrap)
Xevious
Robotron: 2084

Hat Trick (price is $3.00 ea.)

All 7800 games have minor dents in boxes from shrink wrap.

For LYNX:

These games are priced at:
1 to 9 $5.00ea. + S&H
10 to 49 $4.00ea. + S&H
50 to 149 $3.00ea. + S&H
150 or more $2.00ea. + S&H

Double Dragon
Qix

New original LYNX power supplies $10.00ea. + S&H
New Rechargeable Battery Pack & Power Supply By GP
$15.00ea. + S&H
This works on Lynx or Turbo Express

* Special Price *

For Intellivision:
Space Spartan in quantities over 100 are $.50ea + S&H

Shipping & Handling Prices:

1 = $ 2.00
2-3 = 4.00
4-6 = 5.00
7-9 = 6.00
10-13 = 7.00
14-18 = 8.00
19-24 = 10.00
25-32 = 11.00
33-42 = 13.00
43-55 = 15.00

3994. A bunch of stuff

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-29 00:00:00 UTC
From: Asterisk <ampage@geocities.com>
Message-ID: <3366C20B.6E2075CB@geocities.com>
Source record: 73425

I recently got a 400, a 1020, and an 850. The 400 and the 1020 both came with power supplies and the 850 did not. The 1020 was new in the box, but the 400 was loose. For some reason, neither the 400 or the 1020 will turn on. Both apperently use the same power supply, 9vac. The 850 seems to work with my Zip drive power supply, which is 5vdc. Neither of the AC devices work at all. Is this a coincidence or is there something weird here? Oddly, when I first used the 400, it worked fine. I then popped the lid and put in a dfiffernet cartridge. When I closed it, it woudn't turn back on...

Also, I got the 850, but Where do I get the handler for it? In the 1050 manual it says you can use that setup.com program, but I don't have it. Anyone know where I can get an image of the master DOS25 disk? Also, how do I connect a standard external modem with a DB-25 port to it? Do I need a special cable, or can I just use a DB-9 to @B-25 adapter?

Thanks

Xlit runs XFD or ATR files.. I dont think it can run protected 8bit
software.. even with the hardware hack APE.. but XLIT is quite useful I
have run games like WHO DARES WINS 2, Zybex even worked.. and a lot of old
atari stuff runs okay..

Randy;

Check out your local Amity, Salvation Army or whatever non-profit equivalent is near you. At the Amity here in Hamilton, Ont. there's almost always an 8-bit computer system or 2600 system with several joysticks sitting in a dusty box. I'm sure it's the same elsewhere.

Also try garage sales. Good hunting!

For that matter, how do I know whether I have "Synchromesh" at ALL? I think I do have the original Indus boot disk(s) around somewhere, but I acquired the drive, and then the disks, USED and SEPARATELY, so am not really sure what's what -- I also can't even remember one way or the other whether I have ANY DOCS WHATEVER for the Indus... anybody got copies they'd be willing to share?

E-mail even if you also post, please, as my ISP expires articles so fast that I rarely see the same thread twice, let alone responses to my OWN postings. I'll be happy to e-mail YOU someday if YOU request it.

Thanks in advance,
Chris Chiesa

3999. Attach 1200XL kb to 800XL?

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-29 00:00:00 UTC
From: lvt-cfc@cyber2.servtech.com
Message-ID: <5k51ec$6bv@cyber2.servtech.com>
Source record: 73430

Anybody know if it's possible, or how, or where I can find instructions,
to replace an 800XL's keyboard with the nicer keyboard from a 1200XL? It
would be nice if the two keyboards can simply be 'swapped' without having
to otherwise modify either machine -- but is that so?

Please respond via e-mail even if you also post; my ISP expires articles
so fast that I rarely see the same thread twice, let alone responses to my
OWN postings.

Thanks in advance,
Chris Chiesa

Would this "hip-mode" be the more-than-16-shades-of-gray mode that only
works on "some" systems? (If so, the test/demo program posted here a year
or two back, did NOT work on ANY of MY systems, more's the pity... :-( )

Then it's time to complain to your Internet provider -- NOT to this newsgroup! "Embedding the (UUencoded) program directly into the message base" is a much longer-standing method than "attaching" the file, and some of us can still ONLY do it the FIRST way. I conclude from your naivete that you are a relative newcomer to the Internet and/or to Usenet News, so I'll refrain from chewing you out TOO badly -- but I suggest you become aware that not EVERYBODY does things the way YOU do them, and that it is exceedingly rude of YOU to show up years late and blithely demand that age-old ways of doing things be changed for YOUR convenience. Would you arrive two hours late for a formal dinner, then insist that they change the menu to something you liked better? I hope not.

Please forgive the "tone" of this message, but this sort of behavior irritates me wherever it appears, here and in many other places. It behooves us to insist on as widely-usable posting mechanisms as possible -- even if that means using the "lowest common denominator" of functionality! -- so that even those with the most primitive of facilities can continue to participate fully in this forum. There are too few of us left (and probably fewer every day, sorry to say) for us to be able to afford to shut ANYONE out of the game.

We now return to our regularly-scheduled discussion, already in progress.

I kinda liked it.It had a command to make a alias for a device.
(so if you had a RS232 printer,you could re-define P: as R:)
And the menu didn't have to load everytime you went to DOS.
(they could've made that a option in DOS 2!)

I think that Maniac Mansion was first released on the Apple II. If you
like the game, check out Day of the Tentacle. Its a PC CD that is the
"sequel" to Maniac Mansion. It even has a full copy of the first game
on a "computer" inside the game.

You'll need either an MIO or Black Box to get full speed out of the modem. The 850 just won't handle all of that speed. I don't know if an R:P: Connector will handle it or not?

BTW, how are you getting an 14.4K to work with an Apple][? I've got a][+ and a Laser 128 (half way between an][e and][c). I tried using it with an 14.4 modem using Ascii Express and ProTerm. No luck with either.

4010. FS: Complete 5200 plus lots of carts

Newsgroup: comp.sys.atari.8bit
Date: 1997-04-30 00:00:00 UTC
From: zzyzx97@earthlink.net
Message-ID: <3377b10d.11868804@news.earthlink.net>
Source record: 73441

I will sell the carts seperately. Orders must be $15 minimum. Please make me an offer on any item. After a short while I will either sell to the top offer, or withdraw the item.

Complete 5200 system.

Includes the console, power supply, 2 joysticks, and the 2 different owners manuals. Everything works well, with the following exceptions:

The joysticks had problems with the buttons. I disassembled them, and cleaned the contacts (with a pencil eraser). They all came to life except the lower fire button on on the left side. I could see no reason for this ...everything looked good, but that contact was dead. However, that button os duplicated on the right side of the joystick, so it shouldn't be a problem. The other defect is on the other joustick, where the rubber neck at the bottom of the stick is torn. This is from use and has no effect on the use of the joustick. The unit is in excellent condition.

I used it to test the following carts which all work fine, except Star Raiders. All carts are the cart only; no box or manual.

Official Atari 5200 carts:

Centipede A very clean cart except somebody made an "x" on the graphic with what looks like clear nail
polish, which has darkened slightly.

Defender Very good Condition

DigDug Very good condition

Galaxian Excellent Condition

Jungle Hunt A nice cart with an "x" across the graphic in grey

paint.

Kangaroo A nice cart with an "x" across the graphic in grey

paint. Also has a "clearance $1.99" price tag on
the back that won't easily come off.

Kangaroo A nice cart , no "x" but it does have a small line of

grey paint on the graphic.

Ms. Pac-Man many very small "pin pricks" in the label. call it almost good

Pac-man Excellent condition

Pac-man Excellent condition

Pac-man Excellent condition

Pengo Good condition

Pole Position Very good condition

Qix Very Good Condition

Real Sports Tennis Excellent Condition (almost mint)

Robotron 2084 Excellent Condition

Star Raiders Defective...doesn't work. graphic is very good

Super Breakout Excellent Condition

Super Breakout Excellent Condition

Vanguard This is the rare version. They forgot to print
"Vanguard" anywhere on the cart. It has no

name.

From Activision:

River Raid Very Good Condition

Pitfall Very Good Condition

From Sega:

Congo Bongo Excellent except a few monor scratches on back side.

From Electra Concepts Int'l Corp:

Meteorites The rarest of 5200 carts. See a pix at:

Dead right there Geoff, I used the handle Roo and I've moved that over to
the domain
name of my demon net connection, hence roobox !!!! (sad really!!!)

I've been looking at my capture files from the sessions since I've
re-discovered my old Atari kit, it's amazing what an 850 and an 800XL could
do !!!!!

We should track Bastable down, he was quite a role model to me as far as
the 8 bit scene was concerned...

Regards,

Andrew.

The 8-bit hardware can not produce a proper interlaced signal unless
everyone has been adding some kind of hardware hack to do it.

>And there's and
>annoying (but proper) interlace flicker to 'em. Just like on my amiga in
>320x400 interlace mode. :-)

Amiga interlace is properly interlaced video. It sounds like what
people are talking about on the Atari is just page flipping. I recall
seeing (and writing ;-) number of demos in the Last Days that swapped
two GTIA displays during each VBI.

One 60th sec the first screen is displayed, next 60th sec the second
screen is displayed. Back and forth like this. (But this is not
interlacing.) Putting different shades/colors at the same pixel
positions on both screen results in a blended color/shade.

You can probably get a DOS 2.5 image from atari.archive.umich.edu or
ftp.hackerz.com . You will need a special cable for the 850; I think one
of the FAQs for this newsgroup should have the pinouts. You probably won't
be able to do much with the 400 and 850 unless the 400 has been expanded
to 48K memory. A standard 400 only had 8k or 16k.

Does anybody have the instructions for Jeff Minter's "Colourspace" for the Atari 8-bit? I have fiddled with the keyboard commands, but I would really love to see the manual. Thanks for the help!

P.S.
It's maazing to see how far technology (as well as Minter's programming ability) has increased in the past 15 years! I hope his new project makes the VLM look as dated as the VLM made Colourspace look!

This raises some more questions: what is the format of the rest of the file, after the headers? Is it simply raw data in sequential sectors? What are paragraphs and extended paragraphs (same thing as sectors, perhaps?) What, exactly, is the signature? What is the APE authentication CRC? (I looked at the APE home page, but couldn't find documentation on it.) What does the 'sealed' bit mean?

Also, does anybody have the format of .PRO files used by APE? I was wondering how completely it simulates the physical surface of a floppy disk.

I was wondering if someone knows if there is a way to copy content out
of cartridge to a disk and than use it with emulator.

I have one program that i like and use on my 130xe. Atari boots right in
to it when turned on and it reads information saved on disk so it
restarts and runs automaticaly. I could not find simmilar program for
IBM
machines so i was wondering if it is possible to extract this one for
use with emulators.

---------------------------------------------------------------
Atari 2600 items/8-bit Auction #4
---------------------------------------------------------------
Hi Everyone. Here is my listing and a few simple rules:
Feel free to bid on any item(s).
Buyer pays post office shipping from Canada.
All prices in USD. Canadians can pay in equivalent $CDN.
I will keep you posted on the current high bid(s).
All items are in good working condition(unless noted)
but sold AS IS.
Bidders must supply full name, address, and phone number.
Tentative end of auction is 11 PM CST April 30, 1997.

NOTE: Preference will be given to someone who bids on a majority of
the items. Amount for bulk bids must exceed combined bids.

I reserve the right to sell cartridges separately.
This will result in the min. bid on that cartridge(s)
being subtracted from the bulk bid.

The Double-Ender will only be sold separately and should not be
included in a bulk bid.

Thanks.
David

Actually, nope, that's all there is, plus the Treasure.

I pulled it out and played a full game last night--got all the way through
on my first try (on my last man, too!). Netted around 682,000 points,
if I recall.

Anyway, nope, I was right before the 6 sections above are all the sections
I saw playing through the whole game.

I have a collection of Atari equipment including an 800, a 400, an 850 interface, a Percom diskette drive, and a large box full of documentation. There are a number of cartridges, game controllers, etc. but I haven't inventoried everything lately.

(If someone is interested in this equipment, I may even be able to add another 800 with an Atari disk drive (810?) and possibly a daisy wheel printer.)

I'm looking for any offers for the lot. If the highest offer is to cover shipping, I'll give it all away for the cost of the shipping. Everything goes in one batch, I can't part this out right now.

It would be simplest if someone in the Fairfax, VA (Washington DC suburbs) area could just drop by and pick it up some time but I'd be willing to box it up and ship it via UPS.

Please send email responses to pnorloff@os2bbs.com, I don't regularly monitor this newsgroup.

I was poking around some old mac floppies I had and found a hypercard stack
I had written to convert atariwriter files to RTF (rich text format), which
can be imported into MS Word, and probably most other word processors. This
way, you can retain some of the formatting, such as underlining and
italics. It even handled chains of files... Of course, you'd need a way to
get the files from the atari drive to a macintosh.

Anyway, if anyone's interested, I could send it to an archive somewhere.
Its a very bare-bones program...

All three devices use 9vAC, not 5vDC. You might be getting the red light
to come on in the 850, but I doubt it will actually work. Check the switch
on the cartridge door of the 400, if it is not pressed down right the
computer wont come on.

> Also, I got the 850, but Where do I get the handler for it? In the 1050
> manual it says you can use that setup.com program, but I don't have it.

The 850 interface contains its own handler. If you use BobTerm it will
download the handler for you when it starts. If you use another terminal
program that does not do it automatically, you can get a small file
called BOOT850.COM that will download the handler for you. Run it before
starting your terminal program.

> Anyone know where I can get an image of the master DOS25 disk?

The pinout is not a standard db9. There are diagrams in the FAQ (i think)
or you can order a premade cable from places like American Technavision,
listed in the dealer faq.

Try and find the ATMAS-II assembler for the Atari. It was a bit similar to
ASMone... Although I had (and still have) a MAC/65 cartridge, I used
ATMAS-II almost exclusively back then.

From: Matthias Schwarz <matthias@roguewave.com>
Message-ID: <5kac3qlhs1@wave.roguewave.com>
Source record: 73274

Don't wait for a Happy or Speedy drive to copy you *really* (hm...)
protected stuff. I cracked a couple of game disks (such as DRACONUS), and
especially all the amazing games from Poland in the early 90s are all
protected more ore less the same way: Sectors are doubled or tripled on the
same track with usually just one byte being altered; impossible to
determine which sector you're reading in a regular read process. What the
protection does is just creating a very odd access timing - meaning that it
roughly knows when the next sector with the same number should be "there".
Obviously, speed enhancements that read the whole track into a buffer will
never meet the timing requirements.
There is an easy workaround if you have the means to *really* image the
disk (including the multiple sectors): Just flip the switch while the copy
protection gets active and deactivate your enhancement for a moment while
loading that part of the program.

Matthias.

You can run a bbs on an 800 and a couple of floppies. I did it for years. There are quite a few BBS programs out there. And to run just a basic BBS like I did, most of them worked just fine.

While we are on the subject of resurrecting a BBS, I have been toying with the idea of bringing mine back online. 1) Should I leave all of the graphics as it was, or should I make new screens and things like that? I kind of want to keep the old look, but also feel it needs a little sprucing up, maybe even a new name. 2) One of the BBS programs I ran was Bulletin Board Construction Set for the MPP modem, which ran fine for me, no lockups or anything. I now have an 850, and a 2400 baud modem. Can I modify BBCS for the MPP to work with the 850, or do I need to buy the BBCS for the 850? If this is too much of a hassle, I might use another BBS program, but BBCS was awesome. It even supported the MPP mod to hang up the phone after a caller logged off. 3) I think, for the purpose of maintaining a classic system, trying to squeeze 19.2K baud, is not even worth trying. I ran my bbs for years at 300 baud, and it had a number of callers. I think that the highest I will go is 2400 baud. I think that firing it back up to be of real use isn't a good idea, the internet serves us much better. I will be firing it back up for nostalgia. If you want to see what it was like back in the early 80's, drop your 28.8 modem down to 2400 or 1200 or better yet 300, and call an old bbs, that is why I will put my bbs back online, not to be the hottest and fastest bbs since sliced bread. As soon as I get another phone line, I will put my old bbs up one way or another. Isaac Davis Austin, Texas

Atari Games, which is the company that makes the arcade games, is a seaparte company from Atari Corp. (which made the home video game and computer systems), and last I heard, Atari Games is doing quite well. Their game Area 51 was one of the top-played games for quite a while.....

Everyone,

Hello, I was hoping there was someone out there who knows if I can put Atari disk images onto useable Atari-format floppies. I have been wanting to play Alternate Reality : The Dungeon for the longest time. The emulators out right now do not live up to the actual Atari machines, and I would also like to ask if anyone might have an Atari 8-bit machine they would part with. The last Atari I owned was a 130XE, and everyone knows the advantages of having just 64K more memory. I will monitor this newsgroup and appreciate any feedback on these things. Thanks.

I've been using TASM, a table driven cross assembler that includes support
for a bunch of CPU's and thier variants, including the 6502.

Goto http://ftpsearch.unit.no and search for tasm301 to find it near you.
There is also a really first class assembler called 'xa' but according
to what I read, its not been ported to the PC yet.

Anyone else using TASM?

If you can boot DOS with the cart in (normal language carts for instance), you can can copy the cart to disk by doing a binary save from DOS of the cart address range ($A000 thru $BFFF for 8k; $8000 thru $BFFF for 16k). The image file can be run as is by an emulator that can load cart images.

Carts that prevent DOS from loading (i.e., games) cannot be copied this way. However, there are a number of programs both commercial (The Pill, The Impersonator, others) and noncommercial (DMPCRT from Compuserves 8-bit library, and others) which can. Techniques vary, but often it involves inserting the cart after booting and starting the copy program--not for the faint-hearted :-). Also, the commercial products usually prepend or append some extra code which must be stripped out before using with an emulator. The commercial ones tend to be more reliable in my experience.

Note: Many of the later carts used bank-select techniques and cannot be copied using the techniques outlined above. It's presumably possible, but I personally don't know how. Rainbow (Mac or Windows) can run (at least) OSS SuperCarts which used this scheme.

I have no problems sending you the image, only problem is I dont
remember which disk I have it on, so bear with me :)

Also, the image was made on a PC, by a friend of mine, will that have
any compatibility problems with other ROM burners?

: ASMone... Although I had (and still have) a MAC/65 cartridge, I used
: ATMAS-II almost exclusively back then.

Maybe you have a look at Dan Fandrich's list of 6502 cross assembler/tools.
I don't have the URL here, but you can find it from my homepage under
http://www.tu-chemnitz.de/~fachat/c64/links/

My pages are more Commodore stuff, but Dan's list is 6502 in general.

hope it helps

I was wondering if any of the components that make up the
Atari XL/XE computers are still being made today?
If so, are they used in other electronic devices? and, would they
still be the same size, or miniaturized? If they are, is it
possible that someone could put together a pocket-sized Atari?

Just an idea.

Yes.

> perhaps?)

Paragraphs are 16 byte segments, and the extended byte just adds
8 high bits to the number of paragraphs. 24bits total. There just
to show how big the image is. Some dos calls allocate stuff like that
so I guess thats why Nick used it.

Why not just use a menu program that will sort them before displaying them,
but otherwise leaves them as they are on the disk.

You can find MrAtari01@AOL.COM lurking in these parts. He is the author of the still supported Carina BBS System. You will need at least an 800xl, and a hard drive and modem. Of course you will also need a hard drive interface.

I think he has released Carina as shareware, someone here should be able to tell you where you can pick up a copy of it.

4051. SpartaDOS NN Tools Disk 1

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-01 00:00:00 UTC

Message-ID: <01bc5634$1fadc020$038508cf@Computer2.cybernetworking.com>
Source record: 73471

The SpartaDOS 8-bit NN Tools Disk 1 is still available over the Internet via autoresponse e-mail.

Disk 1 includes the best unerase program ever written for the SpartaDOS 8-bit computer, features include the ability to unerase directories.

Send e-mail to these autoresponse mail boxes to receive the file:

For the complete Disk set:

nntools@cybernetworking.com (165,825 bytes in length).

For e-mail boxes with less buffer space, receive the file in three parts:

nn1arc@cybernetworking.com (65,251 bytes),
nn2arc@cybernetworking.com (60,233),
nn3arc@cybernetworking.com (45,712)

To receive just the unerase program:

undel@cybernetworking.com (16,555 bytes)

AOL, CompuServe, EROLS and MSN users note: If you don't receive a response from the cybernetworking.com SMTP server, please understand that the mail servers on these networks could be overloaded, again, and do not respond to the Cyber Networking's SMTP server. My advice is to just try again within 3 days.

Actually, this technique won't work... There is a thing called
burst-mode I/O on Atari drives, and what it means (among other things)
is that DOS will write the sector link information to memory (3 bytes at
the end of each sector), then save the sector (rather than copy it to a
buffer and then save it from there), then copy the original 3 bytes back
to memory.. this won't work with ROM, since DOS can't write its sector
link info. into ROM (read-only, stet)... Bill Wilkinson gives a method
for turning off burst I/O mode under Atari DOS 2.0, in "Mapping the
Atari", revised edition (Compute! Books).. and if I could find my copy
of that book right now I'd post it for you (sorry...)

Also note that the XL/XE series can't use most of these utilities... and
on the 800 you have to hold down the cartridge door switch with tape or
a pencil or something in order to insert a cart. with the power on...

hi donna !

thank you for the reply.

> Why not just use a menu program that will sort them before displaying them,
> but otherwise leaves them as they are on the disk.

sorry, but this doesn't help in my case. i am using the menu.atr
from yogi's site and this menu doesn't sort the filenames.
sometimes it's annoying to find a file on a megaimage.
second: i am printing the directories of my megaimages to find
doubles of software. if they are not sorted it is hard to find
them easy (but here i could use a dos-menu with sorting feature,
you are right).

thanks & regards, sven.

4058. Game Colours

I've recently picked up an Atari 800XL for a little nostalgia game playing. I read the Atari 8 bit FAQ and looked for some resources on the web, but now I'm stuck. I found Asteroids and would love to play it, but unfortunately its colours are nearly impossible for me to see (I have a colour vision problem).
Is there a way to adjust the colours on a cart? Or am I stuck? If there's a resource somewhere on the web that details a fix for this sort of problem, I'd love to be pointed towards it.

Thanks!

-Chris

there is a color adjustment in the form of either variable resistor or
capacitor inside your unit. it will require major dissassembly to reach
it. but that might help ya' out. it shifts the whole output throughout a
range of colors..

Sven,
One thing you could do is to write a BASIC program that gathers all of the directory info into a file that can index on file name or type (entension) or creation date or creation time or attributes or file size. Since MyDOS doesn't use all of these, just filename, type and sectors, this should be very easy. You'd wind up with the mani file and 3 index files. Just run it whenever you make changes. If you want I could build something for you then e-mail it to you. Let me know.

>> d1dol@dtek.chalmers.se

>uhhh... I kind of doubt it... but maybe...

It works. I have done it many times in the past. The ROMS are 4KB in size. If you plug it into the basic socket, half of the 8KB region is the EPROM and the other half contains $ff, i.e. there's nothing connected there.

4063. Atari Fair in Hanau(GER)

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-02 00:00:00 UTC
From: schallt@worms.fh-rpl.de
Message-ID: <5kckl0hna1@widukind.fh-worms.de>
Source record: 73294

Hi,

In the next weeks is another Atari 8 Bit fair in Hanau(Germany).

The fair is held on 25th (So.) in this month.

The organisation is done by Ke-Soft who was the number one in
importing XL games.

Following groups and user will be there:

Ke-Soft - develloper of many games ...

Highlander Soft - has coded a few little and nice Turbo Basic XL prg`s.

Kaiser Soft - makes the Top Mag, has many polen games and other soft.

A M S - the man behind the news in many german magazines...

AMS(C)/ Porttronic - as every year. (hard- and soft made in Germany).

King kong (me) - hardware maker, tester of the new Power Drive 351 XF...

Mr. Sio2PC (Germany) Grassel - developper of power units for the Atari 8 Bit
that only power the XL/E not your house, and more...

Some ABBUC groups - ABBUC = 100 activ members , 400 passiv and many
friends

IF you are from Germany and want to sell or show something on the fair
E-Mail me or look at Marek Tomczyk ARGS Atari 8 Bit Resort Homepage.

King kong - schallt@fh-worms.de

Marek Tomczyk

4064. !!!!!!!!!!!!!!!

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-02 00:00:00 UTC
From: hinda ann kolansky <ayala20@prodigy.net>
Message-ID: <5kd56d$5sm$7254@newssvr07-int.news.prodigy.com>
Source record: 73295

****Make up to $50,000 in 4 weeks! 100% leagal**** NO SCAM!!!

Make $50,000 in 4 weeks!

This system works! NOT A SCAM... Read the text!

This is the fairest, most honest way I have seen to share in the wealth of the world! This works so well that all of my friends are trying it!

Take five minutes to read this and it IT'LL change your life if you want to know how to make thousands of dollars quickly, and leagally with NO CATCH, then keep reading.

THe internet has grown tremendously. it doubles in size every 4 months.

Think about it. YOu see those "make money fast" postings more and more.

Thats becasue it works! So I thought, all those new users might make it work. And I decided to try it out, a few months ago. Besides, whats $5 and a little effort on your behalf?? Everyone was calling it a scam, but there are soany new users from AOL, NETCOM, etc. that they will join in and make it work for you.

just follow these simple steps:

STEP ONE
Invest your $5 by writing your name and address on five seperate sheets of paper along wit the words: "PLEASE ADD ME TO YOUR MAILING LIST." (in this way you are not just sending a dollar bill to someone, you are paying for a legimate service.) Also on each of the sheets of paper indicate the number of the person. Fold a $1 bill inside each piece of paper with your name and address on it. Ensure that when the dollar is folded in between the paper and it is held up to light, THE DOLLAR SHOULD NOT BE VISABLE! Mail 5 of these letters to the following 5 addresses: (only U.S. Dollar bills should be used)

1) Odd Hilsen
Avda Espana 93
Sitio de Calahonda
Mijias Costa- Malaga SPAIN

2) Peter Kjoge
Camino de la Condesa 9, 5-A
E-29640 Fuengirola SPAIN

3) Bob Tomlinson
3208 21st
Sioux City, La 51105 USA

4) Alex Tikhanoff
1636 n. Verdugo rd.
Glendale Ca. 91208 apt.202

USA
5) hinda kolansky
49-35 167 st
flushing ny 11365 usa

STEP TWO
Now remove the top name from the list, and move the other names up. This way, #5 becomes #4 and so o. Put your name as the fifth one on the list.

STEP 3
Post the article to at least 250 newsgroups. There are at least 19000 newsgroups at any given moment in time. Try posting to as many newsgroups as you can. Remember, the more newsgroups you post to, the greater your audience and cash flow from all these subscribers.

STEP 4
You are now in business for yourself, and should start seeing returns within 7 to 14 days! Remember, the internet is new and awesome in its size. There is no way you can lose.

now here is how and why the system works:

Out of every block of 250 posts i made, i got back 5 responses. YES! THATS RIGHT ONLY 5. You make $5 in cash, not check or money orders, but real cash with your name at #5.

Each additional person who sent you $1 now will also make 250 additional postings with your name at #4, 1000 postings. On average then, 50 people will send you $1 with your name at #4....$50 in your pocket!

Now these 50 new people will make 250 postings each with your name at #3 or 10,000 postings. Average returns, 500 people=$500.00. they make 250 postings each with your name at #2=100,000 postings=5000 returns at $1 each=$5,000 in cash!!
Finally, 5,000 people make 250 postings each with your name at #1 and you get a return of $50,000 before your name is dropped from the list. And thats only if everyone down the line makes 250 postings each! Your total income for this cycle is $50,000.00

When you see your name is no longer on the list, you take the latest posting and start all over again.

The end result depends largely on you. You must follow through and repost this article everywhere you can think of! The more postings you make, the more cash ends up in your mailbox. Its too easy and too cheap to pass up!!

So thats it. Pretty simple sounding working concept, dont you think?

But believe me, this really works. There are millions o people surfind the net every day, all day, all over the world. And 100,000 new subscribers everday eager to access your newsgroup. Youknow that because you have read the facts in the newspaper and seen for yourself on T.V. So, my dear little 'fortne seeker.' read carefully the instructions and play fair and swuare with your endeavors.. remember, YOU CAN ONLY TAKE OUT WHAT YOU PUT IN!! thats the key to success in any venture. Print these pages out now so that you may refer to this article at a later date. try to keep an eye on all the postings you made to make sure everyone is playing fairly. You know where your name should be!

REMEMBER....HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE BIG BUCKS!! GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOUW ILL BE MORE THAN GENEROUSLY

REWARDED!

P.S. if you try to decieve people by posting the messages with your name in the list and not sending the bucks to the people already included, you will not get much. I know someone who did this and only got about $150 (and thats after 2 months) then he sent the five bills and was added to their lists. In 4-5 weeks, he had in excess of $10,000.

Good luck!

Ah, but it would work under DOS 3, since that version doesn't save
sector links in the data sectors. That's just one of the reasons I
prefer DOS 3 over DOS 2. :-)

Atari Games, I think, are a group of great programmers but have nothing to do with Atari.. remember way back in tyhe 80s, AtariSoft released all the Atari classics on PC, C64 and other platforms. But AtariSoft never made >Atari 8bit, ST or others titles.

Atari is officially dead, apart from the users that keep it alive with this message base, dial up BBSs and home pages...

Hello All,

I am new to comp.sys.atari.8bit, and I thought it might be nice to introduce myself before I start to flame people and post completly irrelavant informaiton to the group.

My name is Jon Savory, I am 19 years old, a part-time line cook, and full time Atari geek. However, since I am 19, I missed most Atari's glory years. But I am now trying to make up for lost time. My first Atari was, of course, a 2600Jr. It was purchased for me when I was about 8 years old. I thought it was far and away the most incredible piece of $40 electronics ever made, and even today, I think I might have been right. After years of experimenting with my first 2600, such as wedging pennies and other conductive material between the pins of the AV chip, I managed to actually fry my unit. I believe it was pouring a mixture of water and air-brush propelant over the majority of the components that cast the fatal blow. I quickly bought another 2600 and continued to explore the posabilities of rearranging its circuitry.

Moving ahead to the past few months, I got caught by Atari fever again when I purchased an Atari Jaguar for about the same price as my original 2600. This time, my interest in all things Atari was unstoppable. I am now the owner of at least five 2600s, all in different states of (de)construction, two 5200s, a 7800, a Lynx, and my original Atari ST1040 computer which has been with me since 1992.

The other day, I bought my first 8-bit, a 1200XL - in desperate need or repair. I have sinced cleaned it inside and out, removed a long series of corrosion marks accross much of the chassis, cleaned the pins on the socketed chips, and all the contacts on the sockets and cleaned what appeared to be grape jelly out of the keyboard. And now the 1200XL works like new. Just that I don't know how to use it! So that is why I am here, on c.s.a.8bit. I am reading through the FAQ, and searching computer junk-yards for additional parts.

I hope that everyone will bear with me as I ask stupid questions, and will make an attempt to give me some credit, dispite my AOL domain. :)

Thanks for reading,
Jon Savory

And the #1 most frequently asked Atari 2600 question is... <drumroll>
"What kind of power adpater do I need for my 2600?"
The answer? 9 volt @ 500 mA with a 1/8 inch, possitive-tipped plug!

4076. WTB: Mosaic 64K RAM select boards

Newsgroup: comp.sys.atari.8bit

<sgl@hrz.tu-chemnitz.de> wrote:

-sorry, but this doesn't help in my case. i am using the menu.atr
-from yogi's site and this menu doesn't sort the filenames.
-sometimes it's annoying to find a file on a megaimage.
-second: i am printing the directories of my megaimages to find
-doubles of software. if they are not sorted it is hard to find
-them easy (but here i could use a dos-menu with sorting feature,
- you are right).
-

Use ADIR on the pc and port the output through | SORT
There are no duplicates. Where there seem to be duplicates, they are
actually different version of the software (Except for picnic
paranoia, I think the lower # mega image one is bad d/l, have to hit
reset to get it to run on my 800 xl)

I had planned on redoing the menu program when I have time, and/or
redoing the megas so that each one is in alpha order with the max 64
entries. I find it difficult to use them this way also, but it was the
easiest way to archive them (for me).

Imagine if they were on a 90k SD atari disk to make everyone happy!
There'd be over 100 disks......

-thanks & regards, sven.

Demo, not for resale.
Excellent

LABYRINTH floppy from Broderbund. Stamped Dealer Demo, not for
resale.
Excellent

SKY BLAZER floppy from Broderbund stamped "dealer demo, not
for resale:" in Broderbund dust jacket Excellent.

GENETIC DRIFT floppy from Broderbund stamped "dealer demo,
not for resale:"
Excellent.

S.A.M. serial # 19722 from Don't Ask Software. Speech
synthesis
Excellent

SEA FOX floppy from Broderbund stamped "dealer demo, not for
resale:" in Broderbund dust jacket
Fair

CASTLE WOLFENSTEIN floppy from Muse Software.
Excellent

MICKEY IN THE GREAT OUTDOORS. From Walt Disney Personal
Computer Software. in Dust Jacket, plus manual and box. The box is
about 8x10", plastic, with Mickey on both sides (and as with many
games from this period, is the best part of the package).
Mint

COIN-OP CONSOLE PLASTIC TITLE PLATES

I'm sure there is a more official way to describe these. They would
have been part of the game console, except they must have made too
many, so they sold them in the company store. They are all from 1 1/2
to 2 feet long and 5 to 6" wide, and are made of 1/4" plastic. They
have decals on the backside and are meant to have a light shining
through them to announce what game it is.

SKYRAIDER from 1977...this one has a little bit of the paint
(decal on back) chipped off.
Good

BATTLEZONE from 1980....this one also has a little bit of the
paint (decal on back) chipped off.
Very Good

SUPER BUG from KEY Games, copyright Atari, Inc. 1977
Good

ZZyzx

4080. All you need is to invest $5 for a FORTUNE!!! ACT NOW!!!

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-03 00:00:00 UTC
From: Peter Sung <fantasia@hula.net>
Message-ID: <336B1881.3EC4@hula.net>
Source record: 73311

A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah, right, this must be a scam," but like most of us I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it.

So after thinking it over, and talking to a few people first, I thought about trying it. I figured what have I got to lose except 5 stamps and $5.00, right?

Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with my country Post Office, and others had with US Post (1-800-725-2161) and they confirmed that it is indeed legal!

Then I invested the measly $5.00.....

Well GUESS WHAT!!... with in 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But the money just kept coming in. In my first week, I made about $20.00 to $30.00 dollars. By the end of the second week I had made a total of over $1,000.00!!!!!! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in .....

It's certainly worth $5.00, and 5 stamps, I spent more than that on

the lottery!! Let me tell you how this works and most importantly, Why it works....also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PERFECTLY LEGAL!

Mail the 5 envelopes to the following addresses:

#1 B.C. Smith

P.O. Box 170

Greenland, AR 72703

#2 Beddingfield, Bobby

12404 Nokesville Road

P.O. Box 40

Nokesville, Va 22123

#3 Keen, Callye

44181 Bristow Circle

Ashburn, VA 20147

#4 Tom, BDB.

Via Damiano Chiesa 10

00010 Marcellina (Roma)

Italy

#5 H. J. Sung

1839 Keeaumoku St.

Honolulu, HI 96822-3004

STEP 2: Now take the #1 name off the list that you see above, move the

other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 25,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS:

1) Click on any newsgroup, like normal. Then click on "To News", which is in the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with exception of your few changes. (remember to add your name to number 5 and move the rest up)

4) When your done typing in the WHOLE letter, click on 'FILE' above the send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTILL YOU

SAVE IT. (so you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your first copy! (click the 'SEND' button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and click the 'TO NEWS' button again. Type in your flashy subject in the 'SUBJECT BOX', then go to the message and place your cursor here. Now click on 'ATTACHMENT' which is right below the 'SUBJECT BOX'. Click on

attach file then find your letter wherever you saved it. Click once on your file then click 'OPEN' then click 'OK'. If you did this

right,

you should see your filename in the 'ATTACHMENT BOX' and it will be

shaded.

NOW POST AWAY!

FOR INTERNET EXPLORER:

It's just as easy, holding down the left mouse button, highlight this

entire article, then press the 'CTRL' key and 'C' key at the same time

to copy this article. Then print the article for your records to have

the names of those you will be sending $1.00 to.

Go to the newsgroups and press 'POST AN ARTICLE' type in your flashy

subject and click the large window below. Press 'CTRL' and 'V' and the

article will appear in the message window. **BE SURE TO MAKE YOUR

ADDRESS CHANGES TO THE 5 NAMES.** Now re-highlight the article and

re-copy it so you have the changes.... then all you have to do for

each newsgroup is 'CTRL' and 'V' and press 'POST'. It's that easy!!

THAT'S IT! All you have to do is jump to different newsgroups and post

away, after you get the hang of it, it will take about 30 seconds for

each newsgroup!

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL

MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200**

**If these instructions are too complex to follow, try Forte's "Free

Agent." It is freeware for noncommercial use. To download it, simply

use a search utility and type "Forte Free Agent". You should be able

to find it.**

That's it! You will begin receiving money from around the world within

days! You may eventually want to rent a P.O. Box due to the large

amount of mail you receive. If you wish to stay anonymous, you con

invent a name to use, as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

Now the WHY part:

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With a original investment of only $5.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. And start posting again. The thing to remember is that thousands of people all over the world are joining the Internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $5.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users,

every day, with thousands of those joining the actual Internet.
Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly.
Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!!
GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. **By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k.
This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!!
Don't listen to the people that don't trust it and continue to say it's
illegal and don't work... They are just too much skeptics.
You also may want to buy mailing and e-mail lists for future dollars.
Please remember to declare your extra income. Thanks once again...

What is the program? Chances are it's already been copied.

```
---------------------------------------------------------------
Atari 2600 items/8-bit Auction #4
---------------------------------------------------------------
Hi Everyone. Here is my listing and a few simple rules:
Feel free to bid on any item(s).
Buyer pays post office shipping from Canada.
All prices in USD. Canadians can pay in equivalent $CDN.
I will keep you posted on the current high bid(s).
All items are in good working condition(unless noted)
but sold AS IS.
Bidders must supply full name, address, and phone number.

AUCTION IS NOW OVER as of 11:59 PM CST April 30, 1997.

ATTN BIDDERS: Please email me as I don't have access to your old messages.

NOTE: Preference will be given to someone who bids on a majority of
the items. Amount for bulk bids must exceed combined bids.

I reserve the right to sell cartridges separately.
This will result in the min. bid on that cartridge(s)
being subtracted from the bulk bid.

The Double-Ender will only be sold separately and should not be
included in a bulk bid.

Thanks.
David

Well, to say the least my drives are still in shambles... I tried
requesting the roms in a.b.atari.. I was not "well received" there as
follows:

Did I flame in return? No. At the end of the message is my reply....

By the way, I'm just posting this to show how it's going, It's not...

Here is my reply... mean guy, aren't I?

My appologies. I do not wish to violate the intentions of this
newsgroup. And, I will not repeat my request in this group.

I did attempt a search via hotbot and via altavista for a FAQ
concerning this group, but did not find one - had I known, I would not
have posted the request..

Just to let you know:

I have repeatedly attempted to contact ICD Inc. to obtain a
set a US Doublers. They said they had some but could not legally sell
them without the proper packaging (some old contract stipulation..)
But they would contact me as soon as they located the packaging. I've
been checking back with them about every two months. That was six and
a half months ago..

My original request in comp.sys.atari.8bit explained this in
more detail. Again, my appologies. Also included in my original post
was the request that if anyone knew where I could PURCHASE legitimate
US Doublers, I would be grateful for any information. I've checked
with Toad Computers, and every other Atari dealer I could find. Toad
said they get them in once in a while. However they haven't gotten
any in in months..

I'd also like to state that I OWN two sets of US Doublers
which were killed in a lightning spike. Which is why I'd like to
repair them. Again, ICD has no facility to do such a thing. I've
thoroughly checked.

If YOU know of a place where I can PURCHASE a set of Doublers,
or a Happy 1050, or a Duplicator, and they ACTUALLY HAVE SOME IN
STOCK, I'd LOVE to hear about!! This was a last ditch effort...
Again my appologies and sincere regrets.

-Hood-

Thought I'd let everyone know since several folks have emailed saying
that they would like the ROM images emailed to them if I do find them.

That idiot has been trying to sell that stuff for 3 years, if you go on the CSS BBS (Bob Puff's BBS) you'll see the same stuff at the same prices that he's still trying to sell.

I've spoken with several people who all say the same thing, that Terry Ortman is being investigated for mail fraud and some other crimes. Let anyone you that they should stay clear of that guy, he's nothing but a fraud.

You are not alone there. Ususally it's from the other BBS sysops &
users in the area, as I run a BBS on a Commodore 64. (yes, 64s run BBSs
and quite well I might add.)

Some of the games have an element that the new ones lack too... like
originality or playability. I went to an arcade recently and most of
the games were 'jump and beat the daylights out of people' and road race
games. Fortunately I can boot up Asteroids, Pac Man, and a whole slew
of games never to be seen in an arcade or by a IBM computer (without
emulation and a REALLY fast processor).
>

I've got an Amiga and a Mac, here, slowly building a 'Beamer unit (from
hand-me-downs and thrift store finds). But the hardware/software
manufacturers make it hard to enjoy your computer nowadays as they keep
telling you to spend more money on this or that. (not to mention IBMers
having to reconfigure their systems each time to play some of the
games...)

> I think the old 8-bit machines are still a lot of fun. And they'll be
> around for a long time.
>

As long as we are using em they will be around, darn the rest of em...
What really gets me is when they upgrade, toss out their old system, and
then whine on the newsgroups about not being able to play game X on
emulator Y, etc. Get a real 8-bit... On second thought, don't, cause
there would be less for us to snap up. ;)

> There. Just wanted to get that out.

Just had to reply. Hey, have you joined the Classic Computers Mail List
yet?

I'm rather fond of fighting games because of the depth of play--I would
like to
see a lot more variety, tho. BTW: Even a cheap Pentium can emulate old
machines
at full speed.

> >

Ummmm, what country are you in? PC games start cheaper than that, even
in Canadian
money.

On old games, but now that DOS has gone the way of the Dodo bird, this
problem
has been solved.

The HIP mode uses a horizontal interlacing to produce higher horizontal resolution,as I understand.
(the pixels jump back and forth rather than up and down like on a T.V. broadcast)
This is not to be confused with FlickerTerm,which adds no resolution.(it's still 320x200)

Welcome to the group, Jon. Newbies and oldbies alike are welcome. We answer tech questions and then some, going into the regular mundanes and harp on the little things of games.

: I am now the owner of at least five 2600s, all in different states of
: (de)construction, two 5200s, a 7800, a Lynx, and my original Atari ST1040
: computer which has been with me since 1992.

heh... Someone could say you're one of those 2600 hackers who know the innards of the 2600 system. I got mine around the time it was introduced, about 1975, I think. It was still working when we donated it. But of course, everyone's got at least one Atari system in shambles, disassembled. I got two 520STs raided for their power supplies, and other parts. An STE has a PC keyboard on it, and will soon have an external power supply, as soon as I extend the power leads from a foot to about 3 feet, as not to cause the monitor above it trouble.

: like new. Just that I don't know how to use it! So that is why I am here,
: on c.s.a.8bit. I am reading through the FAQ, and searching computer
: junk-yards for additional parts.

All you have is the 1200XL. You will need a floppy drive, and some 5.25 disks that will have one of many DOSes that came out for the 8bits. I can't even begin to list them all. Just the other day, I came across a DOS that I'd never seen before.

Maybe you could assist us in a few things. Maybe in comp.sys.atari.st, you could tell us how to repair the ST's power supply. I'm currently attempting to do this, and have gotten it partway up.

: I hope that everyone will bear with me as I ask stupid questions, and will
: make an attempt to give me some credit, dispite my AOL domain. :)

You're here for educational reasons. So what? We'll teach you. AOL or not, you have to be motivated to learn. Looks like you are.

How much electronics experience do you have?

>I hope that everyone will bear with me as I ask stupid questions, and will
>make an attempt to give me some credit, dispite my AOL domain. :)

Hey, my AOL domain shows sometimes, as does my AT&T Worldnet domain (both are equally hated by some.)

I can't help it, but I like the way AOL handles newsgroups.

About dumb questions -- the dumbest question is the one that doesn't get asked. Some people in any setting (this ng is only one example) have low tolerance for dumb questions or will fill you with tech stuff that you find hard to follow because you don't have the background (yet!) Others will shy away and not answer the question. But there will be enough people around who care about spreading the word and will help you.

BTW, did you know that your 1200XL was the subject of a series of articles in Atari Classics Magazine, in which Bob Woolley, who does get into this ng from time to time, installs an IDE hard drive in a 1200XL?

So, stick with the newsgroup. Join a user group if you wish. Use your modem to call a BBS that supports the Fidonet National Atari Echo (an 8-bit discussion group.) Or, look at the list of BBSs that are part of the IAN/IMR and run BBS Pro on a real Atari 8-bit, or the list of BBSs in the Carina network running that software on a real Atari 8-bit.

And don't give up on the 1200XL! Sure, there are computers that are more modern, that can do things the 1200XL can't do (again, yet!), but Atari 8-bits have a charm that's hard to describe but infectious.

From: "Tom Hunt Sr." <tomhunt@bright.net>
Message-ID: <5kiah3$d69@cletus.bright.net>
Source record: 73226

I am happy to announce that the Closer To Home BBS, aka CTH, now has an internet site. One of the oldest bbses in the world (1987) has been upgraded and modernized. The dial-up bbs is gone, and it has been replaced by the following:

http://CloserToHome.dyn.ml.org

ftp://CloserToHome.dyn.ml.org

CTH is still featuring Atari 8bit and Win95 downloads. I will have to admit that the download area is rather spartan at the moment, but please give it time. The site will be changing rapidly over the next few weeks, as more features and downloads are added.

Planned enhancements to the site include: Web Board message bases, a Mirc server, a real telnetable bbs, and much more.

AtariSoft was a division of Atari, Inc. before it was split into two companies. It published Atari games for other platforms. The Atari 8-bit versions were published directly by Atari. Atari Games and Atari Corp. are both still in existence, Atari Games is owned by WMS, and Atari Corp. is owned by JTS. From what I hear, Atari Games and Atari Corp. both still have rights to all the classic games.

Hi all,

Just wanted to let everyone know that my new page is available:
http://members.aol.com/rodneys433/rw/rs.htm
Yes, all the old crap is still there (including the Polo artwork I mocked up for the Carol Shaw game). But at least you now have the pleasure of seeing it rehashed in a newer, yet better light. I also added my for sale / trade list so be sure and check it out. No earth-shattering finds to be had, but still worth a look. At most you'll have the pleasure of knowing you help raise my web counter. And please, no hard critiquing of the cart prices (I really tried to use my best judgement - honest)! Besides, it would hurt my feelings. 8^)

Thanks,
Rodney

Wish I'd captured everything... I'd love to read back at some of the stuff
I was up to back then... I have disks full of downloads somewhere - must
dig out the 1050 and pray it still works after all these years :)

> We should track Bastable down, he was quite a role model to me as far as
> the 8 bit scene was concerned...
>
I'll have to agree with you there... If it wasn't for James, I'd probably
never have done half the things I did with the Atari.. once the City
vanished and I got a pc, I basically lost the habit of coding altogether..
I'm only starting to get the same enthusiasm for the pc as I had with the
130XE...

I tried using the email search engine from Yahoo, but couldn't find
anything... I can't believe that James wouldn't be on the 'net though

Hello ALL Atari XL/XE/XEGS Freaks and WebSurfers,

Maybe you already know but there is already some month a Atari 8bit
support HomePage called : Beco Tel's HomePage.

But NOW the NEWS :

There some BBSses that run a message network around the world called :
International Message Relay (I.M.R.) and they network the message from
Canada, Usa, Germany and The Netherlands.
Now you can READ the message on the Internet, If you like to reply to the
message you have to take a look in the nodelist and find a BBS near you..

So GO and take a look.... :

International Message Relay (IMR)
I.M.R. : http://www.becotel.demon.nl/imr/

If the Network is running oke you will see every Monday the NEW
message from the Network on the internet.

And you can also take a look to the HomePage :

Home Page : http://www.becotel.demon.nl/

Source record: 73231

Hi there!

You just have a portion of Atari history.. the 1200XL is one of the rare (not the rarest though) Atari 8bit. The 8bits are quite easy to use, just takes a little practice. the Atari-style doses are almost all menu driven which is quite easy to use. If you want something that resembles MS-DOS i would recommend SpartaDos (version 2.3 or newer) They give uyou the familar D1: prompt (equivalent to MSDOS C: prompt)

There are also windows-type environments, but I dont recommend them because they are weak on the 8bit. (unless you have a cartridge version) Anyway, apart from reading the FAQs, and this message base you will have a blast with the greatest 8bit computer ever conceived!

Alan

4102. what became of GOE?

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-04 00:00:00 UTC
From: bchermma@bluffton.edu
Message-ID: <862802468.17290@dejanews.com>
Source record: 73234

What ever became of GOE?
I have a simple demo if it, but never saw or heard of a complete verion, which is exactly what this computer needs!
Also I am curios if anyone has bothered to write a Graphic interface for the NET? Or how about software that will support Atari's with the speed upgrade mention partly in Atari Classics?
Finally I'd like to get a copy of Dimond OS for the 8-BIT, I know it sucks, so please get in touch and I'll take it off your hands for you (Grin)!!

I'd like to add that there IS a better way of making money than working 64 hour shifts in the factory, It is called Mag-net telecomm, and is a division of Uni-NEt from Calafornia. I myself grossed income and am not much af a sales man which says a lot. If you own a Business or would like to work towards your own financial independence then give me a ring!

Thanks!

egad! Use spartados! It doesnt save sector links in the data sectors
like Dos 2, and can read/write DOS 2 disks much easier than dos 3 can!

I am really curious about the telnet feature, as this would be very cool
as a gateway for a Pro! BBS. Do you know of any software that will act
as a Telnet server on a PC, and gateway to a serial port null-modemed to
the 8-bit BBS? In effect, your 8-Bit BBS would be REALLY on the
internet! :) I'll check out the site!

I am going to Europe this year. I need to pay for my trip, and figure I
will sell off some 8 bit stuff to do so.

I have a MUX with 3 carts I am taking offers on.
A Sweet 16 from FTe (really!) in a 256k 800XL
A Black Box and Case which needs a power supply.

This is just a start. I will have an extensive list soon. If you are
interested, leave me Email.

From: terry.ortman@mustang.com
Message-ID: <862798410@mustang.com>
Source record: 73238

cc: comp.sys.atari.8bit@brushtail.hna.com.au
cc: comp.sys.atari.8bit@myriad.alias.net
cc: no.comp.sys.atari.8bit@news.uninett.no

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $50.00 or best offer. These SELL AT Video 61 for $49.95 used.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $90.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $55.00.

Both ATR8000 and Dual Disk Drives, $125.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them. Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00. These sell at Video 61 for $74.95, same price.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package. These

are not currently available anywhere else that I know of.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for $59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual, Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

ATARI RELATED MAGAZINES, Found this unopened box that I had boxed up for a person, but then he never sent the order in:

ATARI EXPLORER, February 1985, Cover Price $3.00
ATARI EXPLORER, April/May 1985, Cover Price $3.00
ATARI EXPLORER, Summer 1995, Cover Price $3.00, $3.95 Canadian
ATARI EXPLORER, Winter 1986, Cover Price $3/$3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Sept/Oct 1986, Cover Price $2.95 $3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Nov/Dec 1986, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Spring 1987, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Summer 1986, Cover Price $2.95 $3.95 In Canada

The Above Magazines are in good/fair confition. They are from the same collection the above 1027, 1050, are from, the previous owner suffered a stroke and asked me to dispose of these for him, as he has moved, and I am asking FAIR MARKET VALUE, as can be seen from the prices sent to me by Video 61, who seem to use the Internet and stocks and sells Atari equipment, Video 61 may send me an offer on these then, as I need the cash.

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE BADLY someone has to have one, or a trak double-sided slave drive. MAKE OFFERS!!

As Per US Code, Title 47, Chapter 5, Subchapter II 227

I'm trying to save my created character, but I having some problems
with xformer and my disk image. The disk image works fine, but i've
tried to "create" a blank floppy by copying my dos25.xtd to savegame.xtd
and then using that disk as my save disk, but temple just seems to sit
there..i've tried to let temple format a new save disk using another
blank i created, but it just set there as well.

1) is this a problem with intermixing xtd and atr images?

2) is this a problem with XFormer?

3) or is this some kind of disk image/copy protection error..

4) or does it just take 30 minutes for temple to create a save disk?

any input appreciated...
(thanks in advance)

I'm trying to recall the title of an Atari 8 bit game:

was a flight game that featured a collection of 3 flight games,
believe Microprose was maker, thought name was "top <something>" or
"<something> ace <something>", was released for all 8 bits, original
release was around 1983.

Game 1 was a straight WWII flight game (1942?) solo player.

Game 2 was (possible sequel) that featured option of playing a friend
(you dogfought using a split screen setup).

Game 3 was some Helicopter rescue game (no big deal) played more
like Fort Apocolypse than Choplifter.

The box that it came in was light blue..does this info jar anyones
memory? I've been trying to recall the title name so I could start
hunting for another copy.

Thanks (in advance)

I have just added 36 new game screen shots for the Magnavox Odyssey2
to my WWW site. This brings the total number of ORIGINAL screen
shots on-line to 1582, for the following systems:

Atari 2600, Atari 5200, Atari 7800, Colecovision, Mattel
Intellivision, Magnavox Odyssey2, Emerson Arcadia 2001, Bally
Astrocade, Atari 8-bit computer, Commodore 64 computer, Commodore
Vic-20 computer, Texas Instruments TI 99/4a computer, Radio Shack
Color Computer, Tomy Tutor computer, 3DO, Sony Playstation, SMS, NES,
SNES, TurboGrafx-16 / TG CD / Duo, Sega Genesis, Nintendo 64, Sega
Saturn, Atari Jaguar, Philips CD-i, and Nintendo Game Boy.

More will be added as I have time. Eventually, I will have my entire
collection on-line (hopefully before the turn of the century :)

Next, I'll probably finish up the Atari 7800, Colecovision, and Atari
2600 sections.

If this is of interest to you, the URL is listed in my sig.

Michael

P.S. And before anyone else asks; if the game isn't on one of my FS/T
lists, it isn't FS/T :)

> to what I read, its not been ported to the PC yet.

>Anyone else using TASM?

Yep, I am using it to document the Atari ROMs. I like it a lot, only
the way it handles local labels is not too nice. Then again, most
other cross assemblers don't even have local labels...

Hi,

>about 1975, I think. It was still working when we donated it. But of
>course, everyone's got at least one Atari system in shambles,
>disassembled.

All too true... Nemisis came for my first 800 XL when I hooked her up
to a CBM64 power supply....

Understandably, she passed out and hasn't regained consciousness
since...

I mean, of all things, a CBM64 power supply!

Regards,
Sidney Cadot

4116. Re: Crossassembler?

Message-ID: <336E2887.D79@zeus.fh-pforzheim.de>
Source record: 73247

i have tested several amiga-cross assemblers but most of them
are "just" cli-versions... what i am searching for is an 6502-
assembler which gui...or just menu-driven...

best would be if there is any possibility to connect my 1050 direct
to my amiga 1200... that whould be a dream...

i dont use on my st the our 5ofts 6502-cross assembler because
all of the cross-assemblers are lacking of "using" time...

i dont mean the assembling-time... but i mean the transfer-time to
real xl...

on amiga i have no way to assemler direct to xl...

on atari st the same... i have to transfer the object-files via
fxp.prg and stxformer 3.0 to xl... and this sux... because as coder
i dont want to spend so much time just transfering the files and
debugg them on real xl...

so at the moment my solution is just in using macroass xe by thorsten
karwoth and coding direct on xl... :) best would be coding
with a mac/65-cardridge (or any other...) because i dont needed
to load the whole assembler ;)))

bye heaven/taquart

Hi !
I'm looking for a transkey-interface to connect a PC-Keyboard to my
800XL ! I prefer the plug-in version, but the other would be fine too.
Where can I find one ? Make your offers !

Stephan

For sale: Rana 1000 disk drive (condition unknown -- was working last time I connected it to my 800, but I sold my 800 about 2 yrs ago and you know what time has a tendancy to do. At this point, it lights up and seeks the head, track display shows the head moving then waits for a command from the non-existent Atari computer). Due to recent move I can't find the power pack, but it takes the standard Atari floor wart.

Also: Atari 1027 printer, with power box.

Best offer on both before 5/15, plus shipping.

Email jmc1@cyberramp.net

Thanks
Mike

From: bchermma@bluffton.edu
Message-ID: <862880144.5481@dejanews.com>
Source record: 73255

My first question is how do I tell the RD.Com program, for Sparta DOS, that I have 572Kb Ram rahter than the 200 some it thinks I have?
Was Pole Postion 2 ever made for the Atari 8-BIT?
Is it true that you can connect a 1050 to an Atari 2600?
Is there a clone of Warlords, from the 2600, for the 8-BIT?
and finally, does anyone know how to get in touch with David R. Sullivan?

P.S. Ever check out the regesters on the Atari Numeric key pad? It uses Stick(0)+ values! Now how come we do not have Joysticks and games that support a controller with 12 or less buttons?

I badly need an XF551 or else a use Black BOX for my Atari 8-BIT. I
anyone is up for trades, then I can offer a lot of 800XL's a couple XE's,
two 850's, one 1040, a lot of 1050, two happy 1050's, carts ect.

Or if you are into Amiga, then I have a lot of software for that too,
that is if it does not sale first.
I have Monkey Island 1&2, Final write v3, Soundstudio, Personal paint,
ect. I do have a bit of hardwhere too, E.G. external disk drives, external
Hard drive.

The Amiga was designed by the same guys who did up the Atari 8-Bit, and
the rights were recently purchased by Gateway 2000 No offence to user of
the Falcon, TT, and ST's).

For a free issue of DOWNLOAD respond.

Thanks!

O.K. I want to know how to install an Atari 130XE/800XL into a minitower along with a black box, I.B.M. hard/disk/cd drives, and one 1050.
Two where can I find recent Atari hacks for both 8, 16, and 32 bits, it does not seem if anyone is donating towards 8-BIT hacks lately, all I see are old ones I.E. how to upgrade your 600XL to 64k, GREAT!
HOw come there are not many programs written to utilize 8-BITS with a lot of RAM??
Is it possible to upgrade a Genesis or SuperNES's 68000 to 68010 or better?

Why do many people get pissed over piracy when more and more original disks go bad every day. We need back ups people, at least when the originals are hard to come across I.E. the ultima series. We could also use some new software, perhaps some of you coders could lay off the impresive demos and make some inpresive games for a while (not to say I hate your Demos or anything).
Is it possible to install both a Pal and NTSC chip into the 8-BIt, and have a switch to select between the two? How?

Ok, I think that is it.

Dee-Lusion

For free issue of DOWNLOAD, get in touch!

Sorry I don't post all questions in one add, but the ideas keep coming too late.

E-Mail Your Way To Riches!

Dear Friend,

We all know E-mail is here to stay. It's fun, easy and exciting! Would you be interested if we could show you a way to make well over $1,000 per week doing it?

This is not a joke. You may have seen many people trying to tell you that you can make money by joining this or that scheme! Guess what, you decide to go for it and then you get nothing but frustration and disappointment! We are here to take your frustration and disappointment into an Electrifying Adventure!

We have been marketing on-line for almost 2 years now! We have never spent one red penny on advertising and made nothing but profits. We can show you how to make money every day of the year. Many people may think this is untrue or it just can't be done. We are here to tell you that it is absolutely not true. The biggest mistake people make about marketing on-line is that they sit and wait for people to contact them. You will never make it if this is your approach and we'll tell you why. There are over 60 MILLION people on-line right now, and seven new people logging on every minute of the day world-wide and everyone is offering something. So how do you get a potential client or a new customer before your competition does? The answer is simply " Creative E-mailing" and it WORKS! I'll tell you why. You're taking your product, service or idea directly to the market instead of waiting for the market to come to you!

Here are a few testimonials we'd like to share with you (They're all 100% TRUE!):

Internet Communications, my wife and I owe you so much. We ordered your Creative E-mail System and within the first week we received over $1,150 in orders for my Internet Consulting business!
--Charles -- California

I have bought two so-called E-mail programs that cost me over $600.00 when I received them. They were extremely difficult to operate and it took me about two weeks to figure them out. Once I did, they were so time consuming it just wasn't worth my time. When I received your course it took me about four minutes to install and I was in business! Within the first 24 hours of my first E-mailing I received over $580.00 in sales over the phone. That first week I grossed over $2,000.00! I really can't believe how easy you made this, anyone can do it! Thanks!
--Dennis -- Illinios

Hello, I'm a divorced mother of two children. I wanted to thank you for helping me out. This was my first time buying anything on the Internet. I was skeptical at first but I figured I'd take a chance. This was the best chance I've ever took! My part-time business is now a full-time home-business, thanks to your

Creative E-mail System. I had to hire my two family members to help me out!
This is GREAT, thanks so much! I'd recommend this for anyone!
--Ellen -- Florida

You may have seen other people offering products "E-mail Programs, E-mail Addresses, Extractors, Etc." The vast majority of these products are very over-priced and very difficult to even use. None of them even supply you with current, up-to-date, FRESH & RESPONSIVE E-mail addresses! Our Creative E-mail System puts everything into one package to make your profits soar immediately! Even if you do not have a product or service to offer, we are going to give you over 500 how-to reports that you will have full reprint rights to! What makes our course different from anything else being offered anywhere is that we're dedicated to your success! We do not succeed unless you succeed! All of our E-mail Address Databases are created in house. We do not trade our databases with anyone because people are selling extremely bad lists on the Internet. Many of other people's databases are filled with duplicate addresses and many of them are undeliverable. We keep our own database so we know exactly what we have and we keep nothing but the best. There's no other way. We believe in producing high quality products that should be priced reasonably for your success! Read on to see the special bonuses you will receive.

******** SPECIAL 10 DAY BONUS ********

If you order within the next 10 days we will include:

1) 500 How-To Reports (You may resell these at any price)

2) Your Personal Complete Guide To The Internet -- This 175 page e-book covers every single aspect of the internet. You will never have to buy another internet book! When you complete this book, you will know more about the internet than 90% of the people online right now.

3) When you purchase our 8 MILLION SUPER responsive E-mail list we will include Mega-Mailer. It sends 250,000 E-mails per hour! All other orders will receive Pegasus Mail. It mails about 30,000 per hour.

Here's how to get the Creative E-Mail System:

All orders are delivered on CD-ROM or 100mb Zip Disk (Iomega).

==========> E-Mail Databases <==========

2 Million FRESH E-mail Addresses only $ 99.95
4 Million FRESH E-mail Addresses only $179.95
6 Million FRESH E-mail Addresses only $249.95
8 Million FRESH E-mail Addresses only $299.95

You will be sending your Marketing Letter to 2, 4, 6 or 8 MILLION People! To mail to 2 MILLION People by U.S. Mail at $.32 per stamp would cost $640,000.00, not including envelopes or paper! The price of 2 MILLION E-mail Addresses isn't even a fraction of the cost. And the great thing is that if you have 10 products, you can E-mail to your list as many times as you want to! Your profits will never stop soaring! Don't pay someone else to send your

advertisement out, do it yourself and save big money! The average cost right now to send your ad one time to ONE MILLION people is $1,400.00. You can send it 100 times to EIGHT MILLION people for only $299.95 and that includes Mega-Mailer that sends 250,000 per hour!

==========> Order Form <==========

This is GREAT, thanks so much! I'd recommend this for anyone!
--Ellen -- Florida

You may have seen other people offering products "E-mail Programs, E-mail Addresses, Extractors, Etc." The vast majority of these products are very over-priced and very difficult to even use. None of them even supply you with current, up-to-date, FRESH & RESPONSIVE E-mail addresses! Our Creative E-mail System puts everything into one package to make your profits soar immediately! Even if you do not have a product or service to offer, we are going to give you over 500 how-to reports that you will have full reprint rights to! What makes our course different from anything else being offered anywhere is that we're dedicated to your success! We do not succeed unless you succeed! All of our E-mail Address Databases are created in house. We do not trade our databases with anyone because people are selling extremely bad lists on the Internet. Many of other people's databases are filled with duplicate addresses and many of them are undeliverable. We keep our own database so we know exactly what we have and we keep nothing but the best. There's no other way. We believe in producing high quality products that should be priced reasonably for your success! Read on to see the special bonuses you will receive.

******** SPECIAL 10 DAY BONUS ********

If you order within the next 10 days we will include:

1) 500 How-To Reports (You may resell these at any price)

2) Your Personal Complete Guide To The Internet -- This 175 page e-book covers every single aspect of the internet. You will never have to buy another internet book! When you complete this book, you will know more about the internet than 90% of the people online right now.

3) When you purchase our 8 MILLION SUPER responsive E-mail list we will include Mega-Mailer. It sends 250,000 E-mails per hour! All other orders will receive Pegasus Mail. It mails about 30,000 per hour.

Here's how to get the Creative E-Mail System:

All orders are delivered on CD-ROM or 100mb Zip Disk (Iomega).

============> E-Mail Databases <================

2 Million FRESH E-mail Addresses only $ 99.95
4 Million FRESH E-mail Addresses only $179.95
6 Million FRESH E-mail Addresses only $249.95
8 Million FRESH E-mail Addresses only $299.95

You will be sending your Marketing Letter to 2, 4, 6 or 8 MILLION People! To mail to 2 MILLION People by U.S. Mail at $.32 per stamp would cost $640,000.00, not including envelopes or paper! The price of 2 MILLION E-mail Addresses isn't even a fraction of the cost. And the great thing is that if you have 10 products, you can E-mail to your list as many times as you want to! Your profits will never stop soaring! Don't pay someone else to send your

advertisement out, do it yourself and save big money! The average cost right now to send your ad one time to ONE MILLION people is $1,400.00. You can send it 100 times to EIGHT MILLION people for only $299.95 and that includes Mega-Mailer that sends 250,000 per hour!

==========> Order Form <==========

Yes, Internet Communications Inc., I wish to take you up on your SPECIAL 10 DAY OFFER FOR YOUR CREATIVE E-MAIL SYSTEM, INCLUDING THE TWO SPECIAL BONUSES: "Complete Internet Guide Book" and "500 How-To-Reports". I understand I have to completely fill out the order form so you can fulfill my order.

Just curious...upon thrifting the other day, I came across a 400/800 cart by INHOUSE called Captain Beeble. Has anyone heard of thie cart? I could not find it on the cart listing, but thought someone out there might have some knowledge on these games. Thanks in advance for any help that you all can give!! :)

It is program that works same as your local cable company information channal. It has over 100 pages that you can adjust speed and dwelling of display and it has a scroll message on bottom of screen.It displays time and date and You can adjust collors and fonts with different sizes and insert your own graphics.

It is wery nicely done and i use it as character generator for displaying information on screen of TV set in motel. My 130 xt is giving me problems so i was trying to get it going on IBM emulator

4144. Public domain or shareware cassettes

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-06 00:00:00 UTC
From: ernest@pi.net
Message-ID: <336fb2a7.17881145@news.pi.net>
Source record: 73180

I am looking for public domain or shareware or freeware games or programs on cassette. Do any of these exist at all? Any libririans out there know of any? I have been working on a program to store cassette tapes on the PC hard disk. This will allow you to store most of your cassette tapes on a hard disk or a single High Density diskette. I am trying to get this program up on the Umich archive soon. Please note that this newsgroup does not always get updated 100 per cent at my provider, so if I do not post a reply to any of your remarks, feel free to send me E-mail.

Are there still people out there that like cassettes on the Classic Atari? I do not really like cassettes, since they are so slow, but we do have a collection of some 350 tapes. Unfortunately, all of these are commercial games, so there is no material I could provide for people to test this stuff.

Any software written by anyone themselves in basic or so would be just as good, so if any of you wrote some game, saved it on a cassette tape way back when, and would like to release this as PD or so, let us hear about it.

Keep those XL's/XE's humming..
Ernest.

4145. Yogi's ATR!!

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-06 00:00:00 UTC
From: peter@soemtron.sb.sub.de
Message-ID: <6WMQR3ppzHB@peter.soemtron.sb.sub.de>
Source record: 73181

Howdy !

I just downloaded some ATR diskimages from the Jellystone FTP site. I love my real 8-bit so I would change those .ATR Files into a real Atari 8-bit disk. BUT that's a problem! I didn't found any working version to do so.

I contacted Steve with this problem. But he couldn't help me. For example: the "T34_A.ATR" file won't work with IMG2DISK. NO WAY! (the program has some fatal bugs in writing the sector to disk)

Any comments? How can I turn a .atr diskimage into a real diskette? (in acceptable speed)

Damn, what's about a PC Programm like "ATR2DCM" ??

Here is a recent list of my Atari library. I have most of these titles
in mu possesion, though there are a few (mostly Jaguary $ Lynx) that I'd
have to special order.

```
Atari XL/XE: Make offer or trade (I need midi support for my Atari, or
XF551, hint,hint)!

Pac Man
River Raid
K-Razy shoot out
Dig Dug (old version)
Dug Dug (updated vesion)
Qix
Star Raiders
Galaxian
Up & Down
Space Invaders
Donkey Kong
Super Breakout
Missile Command
Ms. Pac Man
Fight Night
Hardball
Centipede
Joust
E.T.
Frogger
Crime Buster (lightgun)
Bug Hunt (light gun)
Super Cobra
```

Robotron 2024
Popeye
Basketball
Pitfall
UTIL/KIDS/
Kindercomp
Memory manor
Logic levels
Master type
Koala paint
Atari writer
Atari Basic

5200: (make offer or trade (once again I need MIDI or XF551 (grin)!
PacMan (no box)
Berserk (no box)
Qbert
centipede
galaxian
super breakout
star raiders
space invaders
defender
counter measure (not sure if I'll part with it).

4147. Atari Ideas

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-06 00:00:00 UTC
From: bchermma@bluffton.edu
Message-ID: <862969098.10250@dejanews.com>
Source record: 73183

Here are a couple of questions and ideas.

But, first I'd like to state that my comment about Diamond was only sarcasm, for it is quite impossible to create something that suits all, though it would be nice if this program were enhanced some day!

1.How do I get Sparta DOS to use my 576k for my Ram Drive. I think it only uses 64k.
2. Why doesn't anyone write software for Atari's with lots of RAM I.E. 576k?
3. How come no body but me seems to realize that there are more than 5 STICK values. This is unfortunate because I can not program on the Atari too well, and would really like to see games that support joypads with 12 or less buttons. Test you Atari numeric keypad to see waht I mean.
4. Where is David R Sullivan?
5. How does one go about placing an Atari 130 or 800XL into a tower with the Black BOX, and potential PC drives, and Hard Drives?
6. Has anyone ever wrote a clone of the old 2600 game Warlords?
7.Is it possible to replace the 68000 of a Genesis or Super NES with a 68010 or better?
8. Hey Germans, if you can get ahold of a 800XE or whatever you call them , I would gladly buy it off of you!
9. How to you convert the power of a Euro Atari to use US power?
10 Was Pole Position2, or Counter Measure ever ported to the Atari XL/XE?

Dee-Lusion

My first thought is that a dos25 image would mean the 23 sector per
track/133K format.. Have you tried a normal Single Density (90K) image?

4150. Re: A Newbie's Initial Introduction

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-06 00:00:00 UTC
From: "Thomas J. Andrews" <tandrews16@delphi.com>
Message-ID: <5zB6WN8.tandrews16@delphi.com>
Source record: 73186

My 800XL worked great for years with the original power supply, a CO 61982 "brick". Then, two years after installing a RAMBO 256k upgrade, the supply died on me. I found a Commodore supply at a computer fair (cheap!) and spliced the DIN connector from the dead supply to the 5V line. I also tapped the 9VAC line for my XF551 so I had one less box and set of cables running around. The specs printed on the supply were the same as those on the Atari supply for the 5V line, and it, too gave up after only two years. I now suspect the RAMBO upgrade makes the 800XL use a bit more power than the "brick" is designed to give.

Soon after the Commodore supply quit I got a chance at a water-damaged 320k 130XE with supply for $12. I bought it for the supply, but after letting the XE dry out thoroughly I found it worked perfectly. That is what I use now. Five years, and still going strong!

Hopefully you have a multiplexer and three or four systems.

You could have several nodes running to telnet, and you would rule.

Perhaps even Commodore 64 users would gather there. Then you'd need the
full complement of eight. That's the limit I suppose, so we can't invite
the Apple][or TRS-80 people...

Good thought, but ya I've tried single density images..

The C64 power supply puts out 5VDC and 9VAC. I'm not sure what the pinout is, but it's definitely wrong for an Atari. Of course, one could modify the power cord to put the +-5V on the proper pins. For years I've been using a modified Colecovision supply on my Atari. If someone did modify a C64 PS that way, they better label it carefully to avoid frying a C64!

For Sale:

Atari XE carts: Archon, One on One

Atari 400/800/1200 carts:

Atari -- Pilot, Missile Command, Eastern Front (1941)
Big Five -- Miner 2049er
Imagic -- Demon Attack
Microbits Peripheral Products -- Smart Terminal
Thorn/EMI Video -- Jumbo Jet Pilot, Kickback, Soccer,
and one unlabeled cart.

I don't own an Atari XE or computer to test on, so I
cannot guarantee performance. I prefer to sell as a
group but will certainly consider individual offers
if group offers are not high enough.

References available on request.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 800XE, 65XE, 130XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Source record: 73191

I have an atari 800XL and an Indus GT. I see all this software online but I have no way of getting it from my PC to my Atari. I tried a couple of programs that are supposed to be able to write to atari disks but i couldn't get them to work. On the atari I have old versions of DOS. I have DOS-XL 2.35i and Atari DOS 2.5. DOS-XL can format single density and double density (180K). Atari DOS can only format single density.

You can probably use OS/2 on the PC with Ray Gwinn's SIO serial driver and
his VMODEM "virtual modem" software.

There is a document that describes the memory configuration of the
5200 as opposed to the Atari 400, but you will find all the
titles on the 5200 are available on the 8-bit either as better
versions, or as already ported 5200 versions.

If you really want the 5200 document e-mail me.

4165. USDoubler ROM Here!

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-07 00:00:00 UTC
From: ryang@computerhelp.ca
Message-ID: <19970507002153750732@rainbow04.descon.com>
Source record: 73196

I found it, and I've put it on the web page for my BBS. Go to
http://www.trideja.com/lasthope/ and download the image.

In order to upgrade a 1050 you need an additional RAM chip as well as
this eeprom.. I dont remember the part number, but it is not easily
availabe, but can be scavanged from another dead 1050..

Does anyone have an electronic version of the USD Docs? I have them
someplace, but I doubt I'll have any time to type it in or anything like
that..

So hopefully, those who have experience with the USDoubler can use this
image! I know it's the real ICD code because if you look at the file it
actually has (C) 1984 ICD Inc or something in the ROM..

Enjoy!

<tandrews16@delphi.com> wrote:

>I now suspect the RAMBO upgrade makes the 800XL use a bit more power than
>the "brick" is designed to give.

I kind of doubt that. The power needed to run the handful of 74xx chips
on the RAMBO PCB is miniscule, and the replacement RAM chips shouldn't use
much more power than the original. (They might use less, in fact.) Even
if the upgrade caused the 800XL to draw too much current, the effect
wouldn't be a dead PS, but rather a depressed output voltage. The meaning
of the power rating is usually how much power the PS *can* supply, as
opposed to a level above which the PS gets hurt.

More likely you just had a couple supplies go bad. It happens.

BTW, you can improve RAMBO's compatability with a simple hack. I found
that some games didn't like it, so I figured out how to connect a switch
to disable it.

Cross-posted to: rec.games.video.nintendo,rec.games.video.sega,rec.games.video.3do,comp.sys.cbm,comp.sys.atari.8bit,rec.games.video.atari,rec.games.video.sony,rec.games.video.cd-i,comp.sys.ti,comp.sys.tandy,rec.games.video.classic

I have just added 87 new game screen shots for the Sony Playstation, Sega Saturn and Colecovision to my WWW site. This brings the total number of ORIGINAL screen shots on-line to 1669, for the following systems:

Atari 2600, Atari 5200, Atari 7800, Colecovision, Mattel Intellivision, Magnavox Odyssey2, Emerson Arcadia 2001, Bally Astrocade, Atari 8-bit computer, Commodore 64 computer, Commodore Vic-20 computer, Texas Instruments TI 99/4a computer, Radio Shack Color Computer, Tomy Tutor computer, 3DO, Sony Playstation, SMS, NES, SNES, TurboGrafx-16 / TG CD / Duo, Sega Genesis, Nintendo 64, Sega Saturn, Atari Jaguar, Philips CD-i, and Nintendo Game Boy.

More will be added as I have time. Eventually, I will have my entire collection on-line (hopefully before the turn of the century :)

Next, I'll probably finish up the Atari 7800 and Atari 2600 sections.

If this is of interest to you, the URL is listed in my sig.

Michael

P.S. And before anyone else asks; if the game isn't on one of my FS/T lists, it isn't FS/T :)

It is on the list, and it is and ER cart. I have the publisher listed as
INHOME though. Is it really INHOUSE?

You can find the latest Atari 8-bit list at:

I remember seeing a C compiler for Atari in the Apex catalog long ago. It was called Deep Blue C. For those that don't know what apex software was, it was third party software developed independently of Atari but marketed by Atari. The Deep Blue C compiler was developed by an Atari programmer but was not officially an Atari product :-)

Feel free to make an offer. I am also looking for a 3DO so would be more
than willing to entertain a trade or partial trade for one!

Atari 800 XL and power supply $30 plus $13 shipping via USPS priority
Atari XF 551 DSDD disk drive and power supply $35 plus $10 shipping
Atari 850 Interface Module $20 plus $5 shipping
Atari 410 Tape drive $10 plus $5 shipping
Atari 1050 Disk Drive and power supply $20 plus $10 shipping

Atari 8-bit carts for sale $7 each plus $0.50 per cart shipping

Hardball
Atariwriter
Kids on Keys
Gateway to Apshai
BASIC
Logic Levels
Defender
Pac-Man
Music COmposer
Alphabet Zoo
AtariLab Temperature Module
Space Invaders
Atari Artist (no label)
Kindercomp

FEEL FREE TO MAKE OFFERS. I am also looking for a 3DO and games for
trade if you are interested. We could do a straight trade, trade + your
cash or trade + my case!

Believe it or not, Print shop was one of the last pieces of software that continued to be manufactured and sold by Electronic Arts long after the Atari 8-bit market died. The last time I checked with an EA rep (5 years ago) it was still a product you could order directly from them (including the graphic disks). Of course, that could have changed by now. You have to call them to find out for sure.

Atarians against piracy? Thats ironic :-) Atari probably had the biggest
piracy problems of any computer. Also, there is no one to take our money
anymore...so how else are you going to get software unless you copy it?
Just my opinion :-)

Do you mean the CX85 keypad or the 12-button 2600 keypad? With the 2600
keypad, you can't read all 12 buttons with STICK(x). You need a program
that sets the joystick pins as outputs and reads the paddle and trigger
inputs. There was an example of this in the original 400/800 Basic manual.

There is a C65 version of C as well as other spawns... either way you go
the Atari versions of C are plain vanilla and are lacking. I wanted to
use my 8bit to do C programming for school but no luck. There is no
BORLAND C++ equivalent for the 8bit. (that I know of anyway(

> (Grin)!!

I know that Diamond OS released a few 64k catrirdges that were supposed to
be FAST. I have the Diamond OS demo disk and the 10 page manual for it.

Diamond OS by Reeve Software
29W150 Old Farm Lane
Warrenville, IL 60555
(312) 393-2317

(that's the info on the back of the manual)
I would be surprised if Reeve Software is still around.
CompuServe ID 71521,220 and on GEnie it is REEVESOFT

Good luck! I doubt you would want to buy this manual and the demo disk.
(It's slow and doesn't do that much, the disk is dubbed STjr gives you a
windows like OS on the 8bit.

I have heard of Captain Beeble (there is also Captain beeble 2 out!) It
was a simple but very enjoyable game for the 8bit) The cartridge version
may be quite rare, because I have NEVER heard of it on cartridge until
your post.

About Deep Blue C: this is a member of the family of ACE C compilers. They compile to bytecode and use (nearly?) interchangeable bytecode interpreters. The best of the bunch and most recent is cc8, which probably is a *little* closer to K&R C than CC65. There are no ANSI C compilers for the 8-bit that I know of. With a RAMdisk or a hard disk, the speeds of cc8 and of CC65 are comparable to running Turbo C++ 3.0 on a 386 (they are both admittedly probably less complex compilers than TC). Compiling on a floppy I imagine they would both be pretty slow. Both work pretty well (I think, it's been a while, definitely cc8 does) with TextPro and SpartaDOS. The libraries are not terribly complete for either compiler. The cc8 libs contain a decent subset of stdlib and a bunch of stuff for using the graphics and sound of the Atari. I think there's been a lot more hacking on the CC65 libraries.

The hugest omission in both is the lack of support for dynamically allocated memory. (malloc and free). Also, floats are not supported in either as a type, but there are libraries to use char arrays for floats and call the floating point ROM routines.

I learned C by sitting down with cc8 and K&R, so yeah, they're useful. *I* haven't written anything useful with it, but I imagine one could. Haven't done any coding on the Atari in about five years now, either, come to think of it.

I'm looking for a few volunteers/guests to be with me when I shoot in the SF Bay area for about 1-5 days in early June. Video experience a plus, but not vital. No need to commit for the whole shoot, you can just stop by if you like.

I'm essentially making this offer to allow some of the more ravenous Atari fans a chance to meet some of the most famous names in Atari history. People like Al Alcorn, Joe Decuir, Warren Robinett, Doug Neubauer, Rob Fullop, and more. Mostly 2600-related, but some 8-bit talk.

I don't want to turn it into an outright convention, but I do think it would be nice to let some people meet their "idols" so to speak, and if you want to assist in the interviewing, I could use the help.

Please e-mail me if you want to attend and spread the word at your user group meetings...

Glenn Saunders

Yep, format the entire HD, then partition into as many partitions as you
like. The usual layout will be:

D1: 1-65535 (16mb)
D2: 65535-131070 (16mb)
D3: 131070-xx (remainder)

Well, I can't say for sure which one you would need. But I KNOW that there
are versions that support a 576K machine. Supposedly SpartaDOS X supports
"all" memory configurations, but few have it (I do :)). Look around for
some of the utilities on the net, I am sure you can find something.

> 2. Why doesn't anyone write software for Atari's with lots of RAM I.E.
> 576k?

Like...? We're lucky to have people writing stuff to use the extra 64K on
the 130XE and other upgraded machines. Fact is, many still don't have more
than 64K. (Although I suspect most serious 8-bitters have upgraded)

Can't help you with these....

> 7.Is it possible to replace the 68000 of a Genesis or Super NES with a
> 68010 or better?

I would say no. I did some working on a 68010 for a CS course, and the 68010
behaves differently than the 68000. These differences make it work better for
multitasking, but would require rewriting of software for it. I would think
the same would hold true for later 680x0 chips. Not really doable for a
game console.

Yep. a light hazy blue almost. Any plans on fixing this 'bug' in xlit ??

-They're Atari COM files.Why they're called EXE I have no idea.
-

Because one of the first menus I ever used on the atari called them
that....
EXE for EXEcutable I guess.
COM is more for "COMmand" (I.e. OS routines) files.
BAS for basic, etc. etc. etc.
I prefer to have the actuall name of the game fit in 11 characters
rather than 8 and 3

Back on the market ... though I had it sold.

520ST, SF354 DD, cables and power supplies included

$35 INC postage ...

Theres no keyboard handler (as such) in a 5200
The joysticks are read as paddles, (on the 5200) so you have to
convert those inputs to stick inputs, and also any games that measure
the speed of the paddles have to be rewritten. Also a few zero page
and other vector stuff is a different location on the memory map.

My idea is to disassemble the stuff and change the system equates
(with a "smart" disassembler)

Anyone know how to get the 5200 carts read in by the 8 bit? I thought
that taking them out of the plastic case would work, but the board is
bigger.

4195. WTB: Pooyan

I would like to buy Pooyan for my atari 8-bit computer.
I heard that this is a good conversion of the arcade which I loved.

I have an Atari 600XL with 64K ram and a 1010 Program Recorder
so I will be using the tape version (although I'll take both
tape and disk together).

I have some Atari 8-bit carts I will to let go for those who
will consider to trade (mostly commons though). Email me
for details on that.

Email me at rayrite@engin.umich.edu no reasonable offer refused!
